

# Package ‘AlpsNMR’

October 14, 2021

**Type** Package

**Title** Automated spectraL Processing System for NMR

**Version** 3.2.3

**Encoding** UTF-8

**Description** Reads Bruker NMR data directories both zipped and unzipped.

It provides automated and efficient signal processing for untargeted NMR metabolomics.

It is able to interpolate the samples, detect outliers, exclude regions, normalize, detect peaks, align the spectra, integrate peaks, manage metadata and visualize the spectra.

After spectra processing, it can apply multivariate analysis on extracted data.

Efficient plotting with 1-D data is also available.

Basic reading of 1D ACD/Labs exported JDX samples is also available.

**License** MIT + file LICENSE

**LazyData** FALSE

**Depends** R (>= 4.0), dplyr (>= 0.7.5), future (>= 1.10.0), magrittr (>= 1.5)

**Imports** utils, graphics, stats, grDevices, signal (>= 0.7-6), assertthat (>= 0.2.0), rlang (>= 0.3.0.1), stringr (>= 1.3.1), tibble (>= 1.3.4), tidyr (>= 1.0.0), readxl (>= 1.1.0), plyr (>= 1.8.4), purrr (>= 0.2.5), glue (>= 1.2.0), reshape2 (>= 1.4.3), GGally (>= 1.4.0), mixOmics (>= 6.3.2), matrixStats (>= 0.54.0), writexl (>= 1.0), fs (>= 1.2.6), rmarkdown (>= 1.10), speaq (>= 2.4.0), htmltools (>= 0.3.6), ggrepel (>= 0.8.0), pcaPP (>= 1.9-73), furr (>= 0.1.0), ggplot2 (>= 3.1.0), baseline (>= 1.2-1), zip (>= 2.0.4), tidyselect (>= 0.2.5), vctrs (>= 0.3.0), BiocParallel, SummarizedExperiment, S4Vectors

**Suggests** DT (>= 0.5), testthat (>= 2.0.0), plotly (>= 4.7.1), ChemoSpec, knitr

**biocViews** Software, Preprocessing, Visualization, Classification, Cheminformatics, Metabolomics, DataImport

**RoxygenNote** 7.1.1

**Roxygen** list(markdown = TRUE)

**VignetteBuilder** knitr

**git\_url** <https://git.bioconductor.org/packages/AlpsNMR>

**git\_branch** RELEASE\_3\_13

**git\_last\_commit** 92db448

**git\_last\_commit\_date** 2021-09-16

**Date/Publication** 2021-10-14

AlpsNMR-package

*AlpsNMR: Automated spectral Processing System for NMR***Description**

AlpsNMR allows you to import NMR spectra into R and provides automated and efficient signal processing for untargeted NMR metabolomics.

**Details**

The following functions can be combined with the pipe. They create or modify the `nmr_dataset` object.

- `nmr_read_samples_dir()` or `nmr_read_samples()`
- `nmr_interpolate_1D()`
- `nmr_exclude_region()`
- `nmr_normalize()`

- `plot()`

There are also functions to extract the metadata and submit the samples to irods, see the example below.

The `nmr_dataset` object is essentially a list, so it is easy to access its components for further analysis.

### Author(s)

**Maintainer:** Luis Fernandez <lfernandez@ibebarcelona.eu> ([ORCID](#))

Authors:

- Ivan Montoliu Roura <Ivan.MontoliuRoura@rd.nestle.com>
- Sergio Oller Moreno <soller@ibebarcelona.eu> ([ORCID](#))
- Francisco Madrid Gambin <fmadrid@ibebarcelona.eu> ([ORCID](#))

- Institute for Bioengineering of Catalonia [copyright holder]

### Examples

```
dir_to_demo_dataset <- system.file("dataset-demo", package = "AlpsNMR")
dataset <- nmr_read_samples_dir(dir_to_demo_dataset)
my_nmr_dataset <- dataset %>%
  nmr_interpolate_1D(axis = c(0.4, 10)) %>%
  nmr_exclude_region(exclude = list(water = c(4.6, 5))) %>%
  nmr_normalize(method = "pqn") %>%
  plot
```

---

AUC\_model

*Deprecated function Extracts AUC value*

---

### Description

The function extracts the AUC value from the middle MUVR model

### Usage

```
AUC_model(MVObj)
```

### Arguments

MVObj            a MUVR model

**Value**

the AUC value of the middle model

**Examples**

```
message("Deprecated. MUVr is not compatible with Bioconductor,
use bp_kfold_VIP_analysis method instead")
```

---

bp\_kfold\_VIP\_analysis *K-fold bootstrap and permutation over PLS-VIP*

---

**Description**

Bootstrap and permutation over PLS-VIP on AlpsNMR can be performed on both [nmr\\_dataset\\_1D](#) full spectra as well as [nmr\\_dataset\\_peak\\_table](#) peak tables.

**Usage**

```
bp_kfold_VIP_analysis(dataset, y_column, k = 4, ncomp = 3, nbootstrap = 300)
```

**Arguments**

dataset	An <a href="#">nmr_dataset_family</a> object
y_column	A string with the name of the y column (present in the metadata of the dataset)
k	Number of folds, recommended between 4 to 10
ncomp	number of components for the bootstrap models
nbootstrap	number of bootstrap dataset

**Details**

Use of the bootstrap and permutation methods for a more robust variable importance in the projection metric for partial least squares regression, in a k-fold cross validation

**Value**

A list with the following elements:

- `important_vips`: A list with the important vips selected
- `relevant_vips`: List of vips with some relevance
- `wilcoxon_vips`: List of vips that pass a wilcoxon test
- `vip_means`: Means of the vips scores
- `vip_score_plot`: plot of the vips scores
- `kfold_results`: results of the k [bp\\_VIP\\_analysis](#)
- `kfold_index`: list of index of partitions of the folds

## Examples

```
# Data analysis for a table of integrated peaks

## Generate an artificial nmr_dataset_peak_table:
### Generate artificial metadata:
num_samples <- 64 # use an even number in this example
num_peaks <- 20
metadata <- data.frame(
  NMRExperiment = as.character(1:num_samples),
  Condition = rep(c("A", "B"), times = num_samples/2),
  stringsAsFactors = FALSE
)

### The matrix with peaks
peak_means <- runif(n = num_peaks, min = 300, max = 600)
peak_sd <- runif(n = num_peaks, min = 30, max = 60)
peak_matrix <- mapply(function(mu, sd) rnorm(num_samples, mu, sd),
                      mu = peak_means, sd = peak_sd)
colnames(peak_matrix) <- paste0("Peak", 1:num_peaks)
rownames(peak_matrix) <- paste0("Sample", 1:num_samples)

## Artificial differences depending on the condition:
peak_matrix[metadata$Condition == "A", "Peak2"] <-
  peak_matrix[metadata$Condition == "A", "Peak2"] + 70

peak_matrix[metadata$Condition == "A", "Peak6"] <-
  peak_matrix[metadata$Condition == "A", "Peak6"] - 60

### The nmr_dataset_peak_table
peak_table <- new_nmr_dataset_peak_table(
  peak_table = peak_matrix,
  metadata = list(external = metadata)
)

## We will use bootstrap and permutation method for VIPs selection
## in a k-fold cross validation
bp_results <- bp_kfold_VIP_analysis(peak_table, # Data to be analyzed
  y_column = "Condition", # Label
  k = 3,
  nbootstrap = 10)

message("Selected VIPs are: ", bp_results$important_vips)
```

---

 bp\_VIP\_analysis

*Bootstrap and permutation over PLS-VIP*

---

## Description

Bootstrap and permutation over PLS-VIP on AlpsNMR can be performed on both [nmr\\_dataset\\_1D](#) full spectra as well as [nmr\\_dataset\\_peak\\_table](#) peak tables.

## Usage

```
bp_VIP_analysis(dataset, train_index, y_column, ncomp, nbootstrap = 300)
```

## Arguments

dataset	An <a href="#">nmr_dataset_family</a> object
train_index	set of index used to generate the bootstrap datasets
y_column	A string with the name of the y column (present in the metadata of the dataset)
ncomp	number of components used in the plsda models
nbootstrap	number of bootstrap dataset

## Details

Use of the bootstrap and permutation methods for a more robust variable importance in the projection metric for partial least squares regression

## Value

A list with the following elements:

- `important_vips`: A list with the important vips selected
- `relevant_vips`: List of vips with some relevance
- `pls_vip`: Pls-VIPs of every bootstrap
- `pls_vip_perm`: Pls-VIPs of every bootstrap with permuted variables
- `pls_vip_means`: Pls-VIPs normalized differences means
- `pls_vip_score_diff`: Differences of `pls_vip` and `pls_vip_perm`
- `pls_models`: pls models of the diferent bootstraps
- `pls_perm_models`: pls permuted models of the diferent bootstraps
- `classif_rate`: classification rate of the bootstrap models
- `general_model`: pls model trained with all train data
- `general_CR`: classification rate of the `general_model`
- `vips_model`: pls model trained with vips selection over all train data
- `vips_CR`: classification rate of the `vips_model`
- `error`: error spected in a t distribution
- `lower_bound`: lower bound of the confidence interval
- `upper_bound`: upper bound of the confidence interval

**Examples**

```

# Data analysis for a table of integrated peaks

## Generate an artificial nmr_dataset_peak_table:
### Generate artificial metadata:
num_samples <- 32 # use an even number in this example
num_peaks <- 20
metadata <- data.frame(
  NMRExperiment = as.character(1:num_samples),
  Condition = rep(c("A", "B"), times = num_samples/2),
  stringsAsFactors = FALSE
)

### The matrix with peaks
peak_means <- runif(n = num_peaks, min = 300, max = 600)
peak_sd <- runif(n = num_peaks, min = 30, max = 60)
peak_matrix <- mapply(function(mu, sd) rnorm(num_samples, mu, sd),
                      mu = peak_means, sd = peak_sd)
colnames(peak_matrix) <- paste0("Peak", 1:num_peaks)

## Artificial differences depending on the condition:
peak_matrix[metadata$Condition == "A", "Peak2"] <-
  peak_matrix[metadata$Condition == "A", "Peak2"] + 70

peak_matrix[metadata$Condition == "A", "Peak6"] <-
  peak_matrix[metadata$Condition == "A", "Peak6"] - 60

### The nmr_dataset_peak_table
peak_table <- new_nmr_dataset_peak_table(
  peak_table = peak_matrix,
  metadata = list(external = metadata)
)

## We will use a double cross validation, splitting the samples with random
## subsampling both in the external and internal validation.
## The classification model will be a PLSDA, exploring at maximum 3 latent
## variables.
## The best model will be selected based on the area under the ROC curve
methodology <- plsda_auroc_vip_method(ncomp = 3)
model <- nmr_data_analysis(
  peak_table,
  y_column = "Condition",
  identity_column = NULL,
  external_val = list(iterations = 1, test_size = 0.25),
  internal_val = list(iterations = 3, test_size = 0.25),
  data_analysis_method = methodology
)
## Area under ROC for each outer cross-validation iteration:
model$outer_cv_results_digested$auroc

## The number of components for the bootstrap models is selected
ncomps <- model$outer_cv_results$`1`$model$ncomp

```

```

train_index <- model$train_test_partitions$outter$`1`$outer_train

# Bootstrap and permutation for VIP selection
bp_VIPS <- bp_VIP_analysis(peak_table, # Data to be analyzed
                           train_index,
                           y_column = "Condition",
                           ncomp = ncomps,
                           nbootstrap = 10)

```

---

computes\_peak\_width\_ppm

*Peak width estimation for integration*

---

### Description

Estimates the peak width (ppm width) to perform peak integration using `nmr_integrate_peak_positions`. for this purpose, the full width at half maximum of a peak from alanine doublet is considered.

### Usage

```
computes_peak_width_ppm(nmr_dataset)
```

### Arguments

`nmr_dataset` An [nmr\\_dataset\\_1D](#).

### Value

Numerical. A peak width (ppm) that may be set in `nmr_integrate_peak_positions`

### See Also

Other peak integration functions: [Pipelines](#), [nmr\\_identify\\_regions\\_blood\(\)](#), [nmr\\_identify\\_regions\\_cell\(\)](#), [nmr\\_identify\\_regions\\_urine\(\)](#), [nmr\\_integrate\\_regions\(\)](#), [validate\\_nmr\\_dataset\\_peak\\_table\(\)](#)

Other `nmr_dataset_1D` functions: [\[.nmr\\_dataset\\_1D\(\)](#), [file\\_lister\(\)](#), [files\\_to\\_rDolphin\(\)](#), [format.nmr\\_dataset\\_1D\(\)](#), [is.nmr\\_dataset\\_1D\(\)](#), [load\\_and\\_save\\_functions](#), [new\\_nmr\\_dataset\\_1D\(\)](#), [nmr\\_align\\_find\\_ref\(\)](#), [nmr\\_baseline\\_removal\(\)](#), [nmr\\_baseline\\_threshold\(\)](#), [nmr\\_exclude\\_region\(\)](#), [nmr\\_integrate\\_regions\(\)](#), [nmr\\_interpolate\\_1D\(\)](#), [nmr\\_meta\\_add\(\)](#), [nmr\\_meta\\_export\(\)](#), [nmr\\_meta\\_get\\_column\(\)](#), [nmr\\_meta\\_get\(\)](#), [nmr\\_normalize\(\)](#), [nmr\\_pca\\_build\\_model\(\)](#), [nmr\\_pca\\_outliers\\_filter\(\)](#), [nmr\\_pca\\_outliers\\_plot\(\)](#), [nmr\\_pca\\_outliers\\_robust\(\)](#), [nmr\\_pca\\_outliers\(\)](#), [nmr\\_ppm\\_resolution\(\)](#), [plot.nmr\\_dataset\\_1D\(\)](#), [plot\\_webgl\(\)](#), [print.nmr\\_dataset\\_1D\(\)](#), [rdCV\\_PLS\\_RF\\_ML\(\)](#), [rdCV\\_PLS\\_RF\(\)](#), [save\\_files\\_to\\_rDolphin\(\)](#), [to\\_ChemoSpec\(\)](#), [validate\\_nmr\\_dataset\\_peak\\_table\(\)](#), [validate\\_nmr\\_dataset\(\)](#)

---

confusion_matrix	<i>Deprecated function Confusion matrix of the MUVR model</i>
------------------	---

---

**Description**

After creating a model with the `rdCV_PLS_RF` function, you can run `confusion_matrix` on the model to make a confusion matrix from MUVR. This gives information about the model performance (e.g. classification rate).

**Usage**

```
confusion_matrix(MVObj, model = "mid")
```

**Arguments**

MVObj	a MUVR model
model	What type of model to plot ('min', 'mid' or 'max'). Defaults to 'mid'.

**Value**

A confusion matrix of the model comparing actual vs predicted class

**Examples**

```
message("Deprecated. MUVR is not compatible with Bioconductor,  
use bp_kfold_VIP_analysis method instead")
```

---

files_to_rDolphin	<i>Files to rDolphin</i>
-------------------	--------------------------

---

**Description**

The `rDolphin` family functions are introduced to perform automatic targeted metabolite profiling. Therefore, ensure that you interpolated from -0.1 ppm in order to consider the TSP/DSS signal at 0.0 ppm. The function generates a list with the files required by `to_rDolphin` function. Then, it is required to save them with the `save_files_to_rDolphin`. `to_rDolphin` function will read the generated "parameters.csv" file. function.

**Usage**

```
files_to_rDolphin(nmr_dataset, biological_origin)
```

**Arguments**

nmr_dataset	An <a href="#">nmr_dataset</a> object
biological_origin	String specify the type of sample (blood, urine, cell)

**Value**

a list containing:

- meta\_rDolphin: metadata in rDolphin format,
- NMR\_spectra: spectra matrix
- ROI: ROI template
- Parameters: parameters file

**See Also**

Other import/export functions: [Pipelines](#), [load\\_and\\_save\\_functions](#), [nmr\\_data\(\)](#), [nmr\\_meta\\_export\(\)](#), [nmr\\_read\\_bruker\\_fid\(\)](#), [nmr\\_read\\_samples\(\)](#), [nmr\\_zip\\_bruker\\_samples\(\)](#), [save\\_files\\_to\\_rDolphin\(\)](#), [save\\_profiling\\_output\(\)](#), [to\\_ChemoSpec\(\)](#)

Other nmr\_dataset\_1D functions: [\[.nmr\\_dataset\\_1D\(\)](#), [computes\\_peak\\_width\\_ppm\(\)](#), [file\\_lister\(\)](#), [format.nmr\\_dataset\\_1D\(\)](#), [is.nmr\\_dataset\\_1D\(\)](#), [load\\_and\\_save\\_functions](#), [new\\_nmr\\_dataset\\_1D\(\)](#), [nmr\\_align\\_find\\_ref\(\)](#), [nmr\\_baseline\\_removal\(\)](#), [nmr\\_baseline\\_threshold\(\)](#), [nmr\\_exclude\\_region\(\)](#), [nmr\\_integrate\\_regions\(\)](#), [nmr\\_interpolate\\_1D\(\)](#), [nmr\\_meta\\_add\(\)](#), [nmr\\_meta\\_export\(\)](#), [nmr\\_meta\\_get\\_column\(\)](#), [nmr\\_meta\\_get\(\)](#), [nmr\\_normalize\(\)](#), [nmr\\_pca\\_build\\_model\(\)](#), [nmr\\_pca\\_outliers\\_filter\(\)](#), [nmr\\_pca\\_outliers\\_plot\(\)](#), [nmr\\_pca\\_outliers\\_robust\(\)](#), [nmr\\_pca\\_outliers\(\)](#), [nmr\\_ppm\\_resolution\(\)](#), [plot.nmr\\_dataset\\_1D\(\)](#), [plot\\_webgl\(\)](#), [print.nmr\\_dataset\\_1D\(\)](#), [rdCV\\_PLS\\_RF\\_ML\(\)](#), [rdCV\\_PLS\\_RF\(\)](#), [save\\_files\\_to\\_rDolphin\(\)](#), [to\\_ChemoSpec\(\)](#), [validate\\_nmr\\_dataset\\_peak\\_table\(\)](#), [validate\\_nmr\\_dataset\(\)](#)

**Examples**

```
## Not run:
# Set the directory in which rDolphin files will be saved
output_dir_10_rDolphin <- file.path(your_path, "10-rDolphin")
fs::dir_create(output_dir_10_rDolphin)

# Generate the files (for plasma/serum)
files_rDolphin = files_to_rDolphin(nmr_dataset_0_10_ppm, blood)

# Save the files
save_files_to_rDolphin(files_rDolphin, output_dir_10_rDolphin)

# Build the rDolphin object. Do not forget to set the directory
setwd(output_dir_10_rDolphin)
rDolphin_object = to_rDolphin("Parameters.csv")

# Visualize your spectra
rDolphin_plot(rDolphin_object)

# Run the main profiling function (it takes a while)
targeted_profiling = Automatic_targeted_profiling(rDolphin_object)

# Save results
save_profiling_output(targeted_profiling, output_dir_10_rDolphin)

save_profiling_plots(output_dir_10_rDolphin, targeted_profiling$final_output,
targeted_profiling$reproducibility_data)
```

```
#Additionally, you can run some stats
intensities = targeted_profiling$final_output$intensity
group = as.factor(rDolphin_object$Metadata$type)
model_PLS <- rdCV_PLS_RF(X = intensities, Y = group)

## End(Not run)
```

---

file\_lister

*NMR file lister*

---

### Description

The function lists samples from the chosen folder required to import and create a [nmr\\_dataset\\_1D](#) object. The function is based on the `fs::dir_ls()` function.

### Usage

```
file_lister(dataset_path_nmr, glob)
```

### Arguments

dataset_path_nmr	A character vector of the path where samples are.
glob	A wildcard or globbing pattern common for the samples to be read, for example ending with *0 (spectra acquired by a NOESY sequence often end by 0: 10, 20, 30...) or *s (for example, samples from the tutorial in this package) passed on to <code>grep()</code> to filter paths.

### Value

lists of samples from the chosen folder

### See Also

```

---

`filter.nmr_dataset_family`*Keep samples based on metadata column criteria*

---

## Description

Keep samples based on metadata column criteria

## Usage

```
## S3 method for class 'nmr_dataset_family'  
filter(.data, ...)
```

## Arguments

<code>.data</code>	An <code>nmr_dataset_family</code> object
<code>...</code>	conditions, as in <code>dplyr</code>

## Value

The same object, with the matching rows

## See Also

Other subsetting functions: `[.nmr_dataset_1D()`, `[.nmr_dataset_peak_table()`, `[.nmr_dataset()`, `nmr_pca_outliers_filter()`

## Examples

```
dir_to_demo_dataset <- system.file("dataset-demo", package = "AlpsNMR")  
dataset <- nmr_read_samples_dir(dir_to_demo_dataset)  
dataset_1D <- nmr_interpolate_1D(dataset, axis = c(min = -0.5, max = 10, by = 2.3E-4))  
  
## example 1  
sample_10 <- filter(dataset_1D, NMRExperiment == "10")  
  
## example 2  
#test_samples <- dataset_1D %>% filter(nmr_peak_table$metadata$external$Group == "placebo")
```

---

format.nmr_dataset	<i>Format for nmr_dataset</i>
--------------------	-------------------------------

---

## Description

Format for nmr\_dataset

## Usage

```
## S3 method for class 'nmr_dataset'  
format(x, ...)
```

## Arguments

x	an <code>nmr_dataset</code> object
...	for future use

## Value

Format for nmr\_dataset

#models_stability_plot_plsda(model)

```

**Description**

Once, the MVObj is created and validated, this function extracts autoselected ranked variables from the model (MUVR object). See rdCV\_PLS\_RF function.

**Usage**

```
model_VIP(MVObj)
```

**Arguments**

MVObj            a MUVR model

**Value**

a data frame with the order, name and average rank of selected variables

**Examples**

```
message("Deprecated. MUVR is not compatible with Bioconductor,  
use bp_kfold_VIP_analysis method instead")
```

---

MUVR\_model\_plot

*Deprecated function Model plot*

---

**Description**

Plot the model (a MUVR object) obtained from rdCV\_PLS\_RF function. For more information about the multivariate modelling with minimally biased variable selection (MUVR) from the MUVR package, see Shi et al., 2018 (DOI: 10.1093/bioinformatics/bty710).

**Usage**

```
MUVR_model_plot(MVObj, model = "mid", factCols, sampLabels, ylim = NULL)
```

**Arguments**

MVObj            a MUVR model  
model            What type of model to plot ('min', 'mid' or 'max'). Defaults to 'mid'.  
factCols        An optional vector with colors for the factor levels (in the same order as the levels).  
sampLabels      Sample labels (optional; implemented for classification)  
ylim            Optional for imposing y-limits for regression and classification analysis

**Value**

A plot with the model performance

**Examples**

```
message("MUVR is not compatible with Bioconductor,
use bp_kfold_VIP_analysis method instead")
```

---

```
new_nmr_dataset      Create an nmr_dataset object
```

---

**Description**

Create an nmr\_dataset object

**Usage**

```
new_nmr_dataset(metadata, data_fields, axis)
```

**Arguments**

metadata	A named list of data frames
data_fields	A named list. Check the examples
axis	A list. Check the examples

**Value**

Create an nmr\_dataset object  
Create an nmr\_dataset object

```

---

new\_nmr\_dataset\_1D      *Creates a new 1D nmr\_dataset object from scratch*

---

## Description

Creates a new 1D nmr\_dataset object from scratch

## Usage

```
new_nmr_dataset_1D(ppm_axis, data_1r, metadata)
```

## Arguments

ppm_axis	A numeric vector with the ppm values for the columns of data_1r
data_1r	A numeric matrix with one NMR spectrum on each row
metadata	A list of data frames with at least the NMRExperiment column

## Value

Creates a new 1D nmr\_dataset object from scratch

## See Also

---

nmr\_baseline\_removal *Baseline Removal NMR*

---

## Description

Removes the baseline on an [nmr\\_dataset\\_1D](#) object, using [baseline::baseline.als](#).

## Usage

```
nmr_baseline_removal(nmr_dataset, lambda = 6, p = 0.05, maxit = 20)
```

## Arguments

nmr_dataset	An <a href="#">nmr_dataset_1D</a> .
lambda	2nd derivative constraint
p	Weighting of positive residuals
maxit	Maximum number of iterations

## Value

The same [nmr\\_dataset\\_1D](#) object after baseline removal.

## See Also

```

---

`nmr_baseline_threshold`*Threshold estimation for peak detection*

---

## Description

Estimates the threshold value for peak detection on an `nmr_dataset_1D` object. This is performed computing the mean and the standard deviation of each spectrum beyond 9.5 ppm. The threshold is then averaged of means and adding 3 times the mean of the standard deviations

## Usage

```
nmr_baseline_threshold(nmr_dataset)
```

## Arguments

`nmr_dataset` An `nmr_dataset_1D`.

## Value

Numerical. A threshold value in intensity below that no peak is detected.

```

---

nmr\_batman\_options      *Batman Options helper*

---

### Description

Batman Options helper

### Usage

```
nmr_batman_options(
  ppmRange = matrix(c(3, 3.1, 3.6, 3.7, 3.9, 4, 4, 4.1, 6.95, 7.05, 7.6, 7.7, 7.8,
    7.9), ncol = 2, byrow = TRUE),
  specNo = "1",
  paraProc = 4L,
  negThresh = -0.5,
  scaleFac = 1e+06,
  downSamp = 1,
  hiresFlag = 1,
```

```

    randSeed = 100025L,
    nItBurnin = 200L,
    nItPostBurnin = 5000L,
    multFile = 2L,
    thinning = 50L,
    cfeFlag = 0,
    nItRerun = 5000L,
    startTemp = 1000,
    specFreq = 600,
    a = 1e-05,
    b = 1e-09,
    muMean = 1.1,
    muVar = 0.2,
    muVar_prop = 0.002,
    nuMVar = 0.0025,
    nuMVarProp = 0.1,
    tauMean = -0.05,
    tauPrec = 2,
    rdelta = 0.02,
    csFlag = 0
)

```

### Arguments

ppmRange	Range of ppm to process
specNo	Index of spectra to process
paraProc	Number of cores to use
negThresh	Truncation threshold for negative intensities
scaleFac	Divide each spectrum by this number
downSamp	Decimate each spectrum by this factor
hiresFlag	Keep High Resolution deconvolved spectra
randSeed	A random seed
nItBurnin	Number of burn-in iterations
nItPostBurnin	Number of iterations after burn-in
multFile	Multiplet file (integer)
thinning	Save MCMC state every thinning iterations
cfeFlag	Same concentration for all spectra (fixed effect)
nItRerun	Number of iterations for a batman rerun
startTemp	Start temperature
specFreq	NMR Spectrometer frequency
a	Shape parameter for the gamma distribution (used for lambda, the precision)
b	Rate distribution parameter for the gamma distribution (used for lambda, the precision)

muMean	Peak width mean in ln(Hz)
muVar	Peak width variance in ln(Hz)
muVar_prop	Peak width proposed variance in ln(Hz)
nuMVar	Peak width metabolite variance in ln(Hz)
nuMVarProp	Peak width metabolite proposed variance in ln(Hz)
tauMean	mean of the prior on tau
tauPrec	inverse of variance of prior on tau
rdelta	Truncation of the prior on peak shift (ppm)
csFlag	Specify chemical shift for each multiplet in each spectrum? (chemShiftperSpectra.csv file)

**Value**

A batman\_options object with the Batman Options

**See Also**

Other batman functions: [nmr\\_batman](#)

**Examples**

```
bopts <- nmr_batman_options()
```

---

nmr_data	<i>Set/Return the full spectra matrix</i>
----------	---

---

**Description**

Set/Return the full spectra matrix

**Usage**

```
nmr_data(nmr_dataset, ...)
```

```
nmr_data(nmr_dataset) <- value
```

```
## S3 replacement method for class 'nmr_dataset_1D'
```

```
nmr_data(nmr_dataset) <- value
```

**Arguments**

nmr_dataset	An object from the <a href="#">nmr_dataset_family</a> to get the raw data from
...	Unused and left for future compatibility
value	A matrix

**Value**

a matrix

The given nmr\_dataset

**See Also**

dataset_1D <- nmr_interpolate_1D(dataset, axis = c(min = -0.5, max = 10, by = 2.3E-4))
dataset_data <- nmr_data(dataset_1D)
```

---

nmr_dataset	<i>nmr_dataset (S3 class)</i>
-------------	-------------------------------

---

**Description**

An `nmr_dataset` represents a set of NMR samples. It is defined as an S3 class, and it can be treated as a regular list.

**Details**

It currently has the following elements:

- `metadata`: A list of data frames. Each data frame contains metadata of a given area (acquisition parameters, preprocessing parameters, general sample information...)
- `axis`: A list with length equal to the dimensionality of the data. For 1D spectra it is a list with a numeric vector
- `data_*`: Data arrays with the actual spectra. The first index represents the sample, the rest of the indices match the length of each axis. Typically `data_1r` is a matrix with one sample on each row and the chemical shifts in the columns.
- `num_samples`: The number of samples in the dataset

---

### Description

An `nmr_dataset_1D` represents a set of 1D interpolated NMR samples. It is defined as an S3 class, and it can be treated as a regular list.

### Details

It currently has the following elements:

- `metadata`: A list of data frames. Each data frame contains metadata of a given area (acquisition parameters, preprocessing parameters, general sample information...)
- `axis`: A numeric vector with the chemical shift axis in ppm.
- `data_1r`: A matrix with one sample on each row and the chemical shifts in the columns.

### See Also

Other AlpsNMR dataset objects: [nmr\\_dataset\\_family](#), [nmr\\_dataset](#)

---

nmr\_dataset\_family      *nmr\_dataset like objects (S3 classes)*

---

### Description

The AlpsNMR package defines and uses several objects to manage NMR Data.

### Details

These objects share some structure and functions, so it makes sense to have an abstract class to ensure that the shared structures are compatible

### See Also

[Functions to save and load these objects](#)

Other AlpsNMR dataset objects: [nmr\\_dataset\\_1D](#), [nmr\\_dataset](#)

---

```
nmr_dataset_peak_table
      nmr_dataset_peak_table (S3 class)
```

---

### Description

An `nmr_dataset_peak_table` represents a peak table with metadata. It is defined as an S3 class, and it can be treated as a regular list.

### Details

- `metadata`: A list of data frames. Each data frame contains metadata. Usually the list only has one data frame named "external".
- `peak_table`: A matrix with one sample on each row and the peaks in the columns

---

```
nmr_dataset_peak_table_to_SummarizedExperiment
      Export nmr_dataset_peak_table to SummarizedExperiment
```

---

### Description

Export `nmr_dataset_peak_table` to `SummarizedExperiment`

### Usage

```
nmr_dataset_peak_table_to_SummarizedExperiment(nmr_peak_table)
```

### Arguments

`nmr_peak_table` An `nmr_dataset_peak_table` object

### Value

`SummarizedExperiment` object (unmodified)

### Examples

```
dir_to_demo_dataset <- system.file("dataset-demo", package = "AlpsNMR")
dataset <- nmr_read_samples_dir(dir_to_demo_dataset)
dataset_1D <- nmr_interpolate_1D(dataset, axis = c(min = -0.5, max = 10, by = 2.3E-4))
meta <- file.path(dir_to_demo_dataset, "dummy_metadata.xlsx")
metadata <- readxl::read_excel(meta, sheet = 1)
dataset_1D <- nmr_meta_add(dataset_1D, metadata = metadata, by = "NMRExperiment")
metadata <- list(external = dataset_1D[["metadata"]][["external"]])
peak_table <- nmr_data(dataset_1D)
nmr_peak_table <- new_nmr_dataset_peak_table(peak_table, metadata)
se <- nmr_dataset_peak_table_to_SummarizedExperiment(nmr_peak_table)
```

---

nmr\_data\_1r\_to\_SummarizedExperiment  
*Export 1D NMR data to SummarizedExperiment*

---

### Description

Export 1D NMR data to SummarizedExperiment

### Usage

```
nmr_data_1r_to_SummarizedExperiment(nmr_dataset)
```

### Arguments

nmr\_dataset     An [nmr\\_dataset\\_1D](#) object

### Value

SummarizedExperiment An SummarizedExperiment object (unmodified)

### Examples

```
dir_to_demo_dataset <- system.file("dataset-demo", package = "AlpsNMR")
dataset <- nmr_read_samples_dir(dir_to_demo_dataset)
dataset_1D <- nmr_interpolate_1D(dataset, axis = c(min = -0.5, max = 10, by = 2.3E-4))
se <- nmr_data_1r_to_SummarizedExperiment(dataset_1D)
```

---

nmr\_data\_analysis     *Data analysis*

---

### Description

Data analysis on AlpsNMR can be performed on both [nmr\\_dataset\\_1D](#) full spectra as well as [nmr\\_dataset\\_peak\\_table](#) peak tables.

### Usage

```
nmr_data_analysis(  
  dataset,  
  y_column,  
  identity_column,  
  external_val,  
  internal_val,  
  data_analysis_method  
)
```

**Arguments**

dataset	An <a href="#">nmr_dataset_family</a> object
y_column	A string with the name of the y column (present in the metadata of the dataset)
identity_column	NULL or a string with the name of the identity column (present in the metadata of the dataset).
external_val, internal_val	A list with two elements: iterations and test_size. See <a href="#">random_subsampling</a> for further details
data_analysis_method	An <a href="#">nmr_data_analysis_method</a> object

**Details**

The workflow consists of a double cross validation strategy using random subsampling for splitting into train and test sets. The classification model and the metric to choose the best model can be customized (see [new\\_nmr\\_data\\_analysis\\_method\(\)](#)), but for now only a PLSDA classification model with a best area under ROC curve metric is implemented (see the examples here and [plsda\\_auroc\\_vip\\_method](#))

**Value**

A list with the following elements:

- `train_test_partitions`: A list with the indices used in train and test on each of the cross-validation iterations
- `inner_cv_results`: The output returned by `train_evaluate_model` on each inner cross-validation
- `inner_cv_results_digested`: The output returned by `choose_best_inner`.
- `outer_cv_results`: The output returned by `train_evaluate_model` on each outer cross-validation
- `outer_cv_results_digested`: The output returned by `train_evaluate_model_digest_outer`.

**Examples**

```
# Data analysis for a table of integrated peaks

## Generate an artificial nmr_dataset_peak_table:
### Generate artificial metadata:
num_samples <- 32 # use an even number in this example
num_peaks <- 20
metadata <- data.frame(
  NMRExperiment = as.character(1:num_samples),
  Condition = rep(c("A", "B"), times = num_samples/2),
  stringsAsFactors = FALSE
)

### The matrix with peaks
```

```

peak_means <- runif(n = num_peaks, min = 300, max = 600)
peak_sd <- runif(n = num_peaks, min = 30, max = 60)
peak_matrix <- mapply(function(mu, sd) rnorm(num_samples, mu, sd),
                      mu = peak_means, sd = peak_sd)
colnames(peak_matrix) <- paste0("Peak", 1:num_peaks)

## Artificial differences depending on the condition:
peak_matrix[metadata$Condition == "A", "Peak2"] <-
  peak_matrix[metadata$Condition == "A", "Peak2"] + 70

peak_matrix[metadata$Condition == "A", "Peak6"] <-
  peak_matrix[metadata$Condition == "A", "Peak6"] - 60

### The nmr_dataset_peak_table
peak_table <- new_nmr_dataset_peak_table(
  peak_table = peak_matrix,
  metadata = list(external = metadata)
)

## We will use a double cross validation, splitting the samples with random
## subsampling both in the external and internal validation.
## The classification model will be a PLSDA, exploring at maximum 3 latent
## variables.
## The best model will be selected based on the area under the ROC curve
methodology <- plsda_auroc_vip_method(ncomp = 3)
model <- nmr_data_analysis(
  peak_table,
  y_column = "Condition",
  identity_column = NULL,
  external_val = list(iterations = 3, test_size = 0.25),
  internal_val = list(iterations = 3, test_size = 0.25),
  data_analysis_method = methodology
)
## Area under ROC for each outer cross-validation iteration:
model$outter_cv_results_digested$auroc
## Rank Product of the Variable Importance in the Projection
## (Lower means more important)
sort(model$outter_cv_results_digested$vip_rankproducts)

```

---

```
nmr_data_analysis_method
```

*Create method for NMR data analysis*

---

## Description

Create method for NMR data analysis

**Usage**

```
new_nmr_data_analysis_method(
  train_evaluate_model,
  train_evaluate_model_params_inner,
  choose_best_inner,
  train_evaluate_model_params_outer,
  train_evaluate_model_digest_outer
)
```

**Arguments**

`train_evaluate_model`

A function. The `train_evaluate_model` must have the following signature:

```
function(x_train, y_train, identity_train, x_test, y_test, identity_test, ...)
```

The `x_train` and `y_train` (and their test counterparts) are self-explanatory.

The `identity_` arguments are expected to be factors. They can be used for instance with a callback that uses [mixOmics::plsda](#) in a multilevel approach for longitudinal studies. In those studies the `identity` would be an identifier of the subject.

The `...` arguments are free to be defined for each `train_evaluate_model`.

`train_evaluate_model_params_inner`, `train_evaluate_model_params_outer`

A list with additional arguments to pass to `train_evaluate_model` either in the inner cv loop or in the outer cv loop.

`choose_best_inner`

A function with a single argument:

```
function(inner_cv_results)
```

The argument is a list of `train_evaluate_model` outputs. The return value of must be a list with at least an element named `train_evaluate_model_args`. `train_evaluate_model_args` must be a named list.

- Each element must be named as one of the `train_evaluate_model` arguments.
- Each element must be a vector as long as the number of outer cross-validations.
- The values of each vector must be the values that the `train_evaluate_model` argument must take on each outer cross-validation iteration. Additional list elements can be returned and will be given back to the user.

`train_evaluate_model_digest_outer`

A function with a single argument:

```
function(outer_cv_results)
```

The argument is a list of `train_evaluate_model` outputs in outer cross-validation. The return value is returned by `nmr_data_analysis`

**Value**

An object encapsulating the method dependent functions that can be used with [nmr\\_data\\_analysis](#)

**Examples**

```
help(new_nmr_data_analysis_method)
```

---

```
nmr_exclude_region      Exclude region from samples
```

---

**Description**

Excludes a given region (for instance to remove the water peak)

**Usage**

```
nmr_exclude_region(samples, exclude = list(water = c(4.7, 5)))

## S3 method for class 'nmr_dataset_1D'
nmr_exclude_region(samples, exclude = list(water = c(4.7, 5)))
```

**Arguments**

samples	An object
exclude	A list with regions to be removed Typically: <code>exclude = list(water = c(4.7, 5.0))</code>

**Value**

The same object, with the regions excluded

**See Also**

**Examples**

```
nmr_dataset <- nmr_dataset_load(system.file("extdata", "nmr_dataset.rds", package = "AlpsNMR"))
exclude_regions <- list(water = c(5.1, 4.5))
nmr_dataset <- nmr_exclude_region(nmr_dataset, exclude = exclude_regions)

nmr_dataset <- nmr_dataset_load(system.file("extdata", "nmr_dataset.rds", package = "AlpsNMR"))
exclude_regions <- list(water = c(5.1, 4.5))
nmr_dataset <- nmr_exclude_region(nmr_dataset, exclude = exclude_regions)
```

---

nmr\_export\_data\_1r      *Export 1D NMR data to a CSV file*

---

**Description**

Export 1D NMR data to a CSV file

**Usage**

```
nmr_export_data_1r(nmr_dataset, filename)
```

**Arguments**

nmr\_dataset      An [nmr\\_dataset\\_1D](#) object  
filename          The csv filename

**Value**

The nmr\_dataset object (unmodified)

**Examples**

```
dir_to_demo_dataset <- system.file("dataset-demo", package = "AlpsNMR")  
dataset <- nmr_read_samples_dir(dir_to_demo_dataset)  
dataset_1D <- nmr_interpolate_1D(dataset, axis = c(min = -0.5, max = 10, by = 2.3E-4))  
#nmr_export_data_1r(dataset_1D, "exported_nmr_dataset")
```

---

nmr\_identify\_regions\_blood  
*NMR peak identification (plasma/serum samples)*

---

**Description**

Identify given regions and return a data frame with plausible assignments in human plasma/serum samples.

**Usage**

```
nmr_identify_regions_blood(  
  ppm_to_assign,  
  num_proposed_compounds = 3,  
  verbose = FALSE  
)
```

**Arguments**

ppm\_to\_assign A vector with the ppm regions to assign  
 num\_proposed\_compounds  
     set the number of proposed metabolites sorted by the number times reported in  
     the HMDB: HMDB\_blood.  
 verbose Logical value. Set it to TRUE to print additional information

**Value**

a data frame with plausible assignments.

**See Also**

Other peak detection functions: [Pipelines](#), [nmr\\_baseline\\_threshold\(\)](#), [nmr\\_identify\\_regions\\_cell\(\)](#), [nmr\\_identify\\_regions\\_urine\(\)](#), [nmr\\_integrate\\_regions\(\)](#), [regions\\_from\\_peak\\_table\(\)](#), [validate\\_nmr\\_dataset\\_peak\\_table\(\)](#)

**Examples**

```
# We identify regions from from the corresponding ppm stored in a vector.
ppm_to_assign <- c(4.060960203, 3.048970634, 2.405935596,
3.24146865, 0.990616851, 1.002075066, 0.955325548)
identification <- nmr_identify_regions_blood (ppm_to_assign)
```

---

```
nmr_identify_regions_cell
      NMR peak identification (cell samples)
```

---

**Description**

Identify given regions and return a data frame with plausible assignments in cell samples.

**Usage**

```
nmr_identify_regions_cell(
  ppm_to_assign,
  num_proposed_compounds = 3,
  verbose = FALSE
)
```

**Arguments**

ppm\_to\_assign A vector with the ppm regions to assign  
 num\_proposed\_compounds  
     set the number of proposed metabolites in HMDB\_cell.  
 verbose Logical value. Set it to TRUE to print additional information

**Value**

a data frame with plausible assignments.

**See Also**

Other peak detection functions: [Pipelines](#), [nmr\\_baseline\\_threshold\(\)](#), [nmr\\_identify\\_regions\\_blood\(\)](#), [nmr\\_identify\\_regions\\_urine\(\)](#), [nmr\\_integrate\\_regions\(\)](#), [regions\\_from\\_peak\\_table\(\)](#), [validate\\_nmr\\_dataset\\_peak\\_table\(\)](#)

identification <- nmr_identify_regions_cell (ppm_to_assign, num_proposed_compounds = 3)
```

---

nmr\_identify\_regions\_urine

*NMR peak identification (urine samples)*

---

**Description**

Identify given regions and return a data frame with plausible assignments in human urine samples. The data frame contains the column "Bouatra\_2013" showing if the proposed metabolite was reported in this publication as regular urinary metabolite.

**Usage**

```
nmr_identify_regions_urine(  
  ppm_to_assign,  
  num_proposed_compounds = 5,  
  verbose = FALSE  
)
```

**Arguments**

`ppm_to_assign` A vector with the ppm regions to assign

`num_proposed_compounds` set the number of proposed metabolites sorted by the number times reported in the HMDB: HMDB\_urine.

`verbose` Logical value. Set it to TRUE to print additional information

**Value**

a data frame with plausible assignments.

**See Also**

Other peak detection functions: [Pipelines](#), [nmr\\_baseline\\_threshold\(\)](#), [nmr\\_identify\\_regions\\_blood\(\)](#), [nmr\\_identify\\_regions\\_cell\(\)](#), [nmr\\_integrate\\_regions\(\)](#), [regions\\_from\\_peak\\_table\(\)](#), [validate\\_nmr\\_dataset\\_](#)

**Examples**

```
# We identify regions from from the corresponding ppm stored in a vector.
ppm_to_assign <- c(4.060960203, 3.048970634, 2.405935596,
3.24146865, 0.990616851, 1.002075066, 0.955325548)
identification <- nmr_identify_regions_urine (ppm_to_assign, num_proposed_compounds = 5)
```

---

nmr\_integrate\_regions *Integrate regions*

---

**Description**

Integrate given regions and return a data frame with them

**Usage**

```
nmr_integrate_regions(samples, regions, ...)

## S3 method for class 'nmr_dataset_1D'
nmr_integrate_regions(
  samples,
  regions,
  fix_baseline = TRUE,
  excluded_regions_as_zero = FALSE,
  set_negative_areas_to_zero = FALSE,
  ...
)
```

**Arguments**

samples	A <a href="#">nmr_dataset</a> object
regions	A named list. Each element of the list is a region, given as a named numeric vector of length two with the range to integrate. The name of the region will be the name of the column
...	Keep for compatibility
fix_baseline	A logical. If TRUE it removes the baseline. See details below
excluded_regions_as_zero	A logical. It determines the behaviour of the integration when integrating regions that have been excluded. If TRUE, it will treat those regions as zero. If FALSE (the default) it will return NA values.

If `fix_baseline` is TRUE, then the region boundaries are used to estimate a baseline. The baseline is estimated "connecting the boundaries with a straight line". Only when the spectrum is above the baseline the area is integrated (negative contributions due to the baseline estimation are ignored).

`set_negative_areas_to_zero`

A logical. Ignored if `fix_baseline` is FALSE. When set to TRUE negative areas are set to zero.

## Value

An `nmr_dataset_peak_table` object

## See Also

Other peak detection functions: [Pipelines](#), [nmr\\_baseline\\_threshold\(\)](#), [nmr\\_identify\\_regions\\_blood\(\)](#), [nmr\\_identify\\_regions\\_cell\(\)](#), [nmr\\_identify\\_regions\\_urine\(\)](#), [regions\\_from\\_peak\\_table\(\)](#), [validate\\_nmr\\_dataset\\_peak\\_table\(\)](#)

dataset_1D <- nmr_interpolate_1D(dataset, axis = c(min = -0.5, max = 10, by = 2.3E-4))

dir_to_demo_dataset <- system.file("dataset-demo", package = "AlpsNMR")
dataset <- nmr_read_samples_dir(dir_to_demo_dataset)
dataset_1D <- nmr_interpolate_1D(dataset, axis = c(min = -0.5, max = 10, by = 2.3E-4))
```

---

nmr_meta_add	<i>Add metadata to an nmr_dataset object</i>
--------------	--

---

## Description

This is useful to add metadata to datasets that can be later used for plotting spectra or further analysis (PCA...).

## Usage

```
nmr_meta_add(nmr_data, metadata, by = "NMRExperiment")

nmr_meta_add_tidy_excel(nmr_data, excel_file)
```

## Arguments

nmr_data	an <a href="#">nmr_dataset_family</a> object
metadata	A data frame with metadata to add
by	A column name of both the <code>nmr_data\$metadata\$external</code> and the metadata data.frame. If you want to merge two columns with different headers you can use a named character vector <code>c("NMRExperiment" = "ExperimentNMR")</code> where the left side is the column name of the <code>nmr_data\$metadata\$external</code> and the right side is the column name of the metadata data frame.
excel_file	Path to a tidy Excel file name. The Excel can consist of multiple sheets, that are added sequentially. The first column of the first sheet <b>MUST</b> be named as one of the metadata already present in the dataset, typically will be "NMRExperiment". The rest of the columns of the first sheet can be named at will. Similarly, the first column of the second sheet must be named as one of the metadata already present in the dataset, typically "NMRExperiment" or any of the columns of the first sheet. The rest of the columns of the second sheet can be named at will. See the package vignette for an example.

## Value

The `nmr_dataset_family` object with the added metadata

**Examples**

```
# Load a demo dataset with four samples:
dataset <- system.file("dataset-demo", package = "AlpsNMR")
nmr_dataset <- nmr_read_samples_dir(dataset)

# At first we just have the NMRExperiment column
nmr_meta_get(nmr_dataset, groups = "external")
# Get a table with NMRExperiment -> SubjectID
dummy_metadata <- system.file("dataset-demo", "dummy_metadata.xlsx", package = "AlpsNMR")
NMRExp_SubjID <- readxl::read_excel(dummy_metadata, sheet = 1)

NMRExp_SubjID
# We can link the SubjectID column of the first excel into the dataset
nmr_dataset <- nmr_meta_add(nmr_dataset, NMRExp_SubjID, by = "NMRExperiment")
nmr_meta_get(nmr_dataset, groups = "external")
# The second excel can use the SubjectID:
SubjID_Age <- readxl::read_excel(dummy_metadata, sheet = 2)
SubjID_Age
# Add the metadata by its SubjectID:
nmr_dataset <- nmr_meta_add(nmr_dataset, SubjID_Age, by = "SubjectID")
# The final loaded metadata:
nmr_meta_get(nmr_dataset, groups = "external")

# Read a tidy excel file:

dataset <- system.file("dataset-demo", package = "AlpsNMR")
nmr_dataset <- nmr_read_samples_dir(dataset)

# At first we just have the NMRExperiment column
nmr_meta_get(nmr_dataset, groups = "external")
# Get a table with NMRExperiment -> SubjectID
```

```
dummy_metadata <- system.file("dataset-demo", "dummy_metadata.xlsx", package = "AlpsNMR")

nmr_dataset <- nmr_meta_add_tidy_excel(nmr_dataset, dummy_metadata)
# Updated Metadata:
nmr_meta_get(nmr_dataset, groups = "external")
```

---

nmr_meta_export	<i>Export Metadata to an Excel file</i>
-----------------	---

---

## Description

Export Metadata to an Excel file

## Usage

```
nmr_meta_export(
  nmr_dataset,
  xlsx_file,
  groups = c("info", "orig", "title", "external")
)
```

## Arguments

nmr_dataset	An <a href="#">nmr_dataset_family</a> object
xlsx_file	"The .xlsx excel file"
groups	A character vector. Use "external" for the external metadata or the default for a more generic solution

## Value

The Excel file name

#nmr_meta_export(dataset, "metadata.xlsx")
```

---

nmr_meta_get	<i>Get metadata</i>
--------------	---------------------

---

## Description

Get metadata

## Usage

```
nmr_meta_get(samples, columns = NULL, groups = NULL)
```

## Arguments

<code>samples</code>	a <code>nmr_dataset_family</code> object
<code>columns</code>	Columns to get. By default gets all the columns.
<code>groups</code>	Groups to get. Groups are predefined of columns. Typically "external" for metadata added with <code>nmr_meta_add</code> . Both groups and columns can't be given simultaneously.

## Value

a data frame with the injection metadata

```

---

nmr_normalize	<i>Normalize nmr_dataset_1D samples</i>
---------------	---

---

## Description

The `nmr_normalize` function is used to normalize all the samples according to a given criteria.

## Usage

```
nmr_normalize(
  samples,
  method = c("area", "max", "value", "region", "pqn", "none"),
  ...
)

nmr_normalize_extra_info(samples)
```

## Arguments

samples	A <a href="#">nmr_dataset_1D</a> object
method	The criteria to be used for normalization - area: Normalize to the total area - max: Normalize to the maximum intensity - value: Normalize each sample to a user defined value - region: Integrate a region and normalize each sample to that region - pqn: Use Probabalistic Quotient Normalization for normalization - none: Do not normalize at all
...	Method dependent arguments: - method == "value": - value: A numeric vector with the normalization values to use - method == "region": - ppm_range: A chemical shift region to integrate - ...: Other arguments passed on to <a href="#">nmr_integrate_regions</a>

**Details**

The `nmr_normalize_extra_info` function is used to extract additional information after the normalization. Typically, we want to know what was the actual normalization factor applied to each sample. The extra information includes a plot, representing the dispersion of the normalization factor for each sample.

**Value**

The `nmr_dataset_1D` object, with the samples normalized. Further information for diagnostic of the normalization process is also saved and can be extracted by calling `nmr_normalize_extra_info()` afterwards.

**See Also**

nmr_dataset <- nmr_dataset_load(system.file("extdata", "nmr_dataset.rds", package = "AlpsNMR"))
nmr_dataset <- nmr_normalize(nmr_dataset, method = "area")
norm_extra_info <- nmr_normalize_extra_info(nmr_dataset)
norm_extra_info$plot
```

---

`nmr_pca_build_model`     *Build a PCA on for an nmr\_dataset*

---

**Description**

This function builds a PCA model with all the NMR spectra. Regions with zero values (excluded regions) or near-zero variance regions are automatically excluded from the analysis.

**Usage**

```
nmr_pca_build_model(
  nmr_dataset,
  ncomp = NULL,
  center = TRUE,
```

```

    scale = FALSE,
    ...
)

## S3 method for class 'nmr_dataset_1D'
nmr_pca_build_model(
  nmr_dataset,
  ncomp = NULL,
  center = TRUE,
  scale = FALSE,
  ...
)

```

### Arguments

<code>nmr_dataset</code>	a <a href="#">nmr_dataset_1D</a> object
<code>ncomp</code>	Integer, if data is complete <code>ncomp</code> decides the number of components and associated eigenvalues to display from the <code>pcasvd</code> algorithm and if the data has missing values, <code>ncomp</code> gives the number of components to keep to perform the reconstitution of the data using the NIPALS algorithm. If <code>NULL</code> , function sets <code>ncomp = min(nrow(X), ncol(X))</code>
<code>center</code>	(Default= <code>TRUE</code> ) Logical, whether the variables should be shifted to be zero centered. Only set to <code>FALSE</code> if data have already been centered. Alternatively, a vector of length equal the number of columns of <code>X</code> can be supplied. The value is passed to <a href="#">scale</a> . If the data contain missing values, columns should be centered for reliable results.
<code>scale</code>	(Default= <code>FALSE</code> ) Logical indicating whether the variables should be scaled to have unit variance before the analysis takes place. The default is <code>FALSE</code> for consistency with <code>prcomp</code> function, but in general scaling is advisable. Alternatively, a vector of length equal the number of columns of <code>X</code> can be supplied. The value is passed to <a href="#">scale</a> .
<code>...</code>	Additional arguments passed on to <a href="#">mixOmics::pca</a>

### Value

A PCA model as given by [mixOmics::pca](#) with two additional attributes:

- `nmr_data_axis` containing the full ppm axis
- `nmr_included` with the data points included in the model These attributes are used internally by `AlpsNMR` to create loading plots

```

---

nmr_pca_outliers	<i>Compute PCA residuals and score distance for each sample</i>
------------------	---

---

## Description

Compute PCA residuals and score distance for each sample

## Usage

```
nmr_pca_outliers(
  nmr_dataset,
  pca_model,
  ncomp = NULL,
  quantile_critical = 0.975
)
```

## Arguments

nmr_dataset	An <a href="#">nmr_dataset_1D</a> object
pca_model	A pca model returned by <a href="#">nmr_pca_build_model</a>
ncomp	Number of components to use. Use NULL for 90% of the variance
quantile_critical	critical quantile

## Value

A list with:

- outlier\_info: A data frame with the NMRExperiment, the Q residuals and T scores
- ncomp: Number of components used to compute Q and T
- Tscore\_critical, QResidual\_critical: Critical values, given a quantile, for both Q and T.

---

`nmr_pca_outliers_robust`

*Outlier detection through robust PCA*

---

**Description**

Outlier detection through robust PCA

**Usage**

```
nmr_pca_outliers_robust(nmr_dataset, ncomp = 5)
```

**Arguments**

`nmr_dataset` An `nmr_dataset_1D` object  
`ncomp` Number of rPCA components to use

We have observed that the statistical test used as a threshold for outlier detection usually flags as outliers too many samples, due possibly to a lack of gaussianity. As a workaround, a heuristic method has been implemented: We know that in the Q residuals vs T scores plot from [nmr\\_pca\\_outliers\\_plot\(\)](#) outliers are on the right or on the top of the plot, and quite separated from non-outlier samples.

To determine the critical value, both for Q and T, we find the biggest gap between samples in the plot and use as critical value the center of the gap.

This approach seems to work well when there are outliers, but it fails when there isn't any outlier. For that case, the gap would be placed anywhere and that is not desirable as many samples would be incorrectly flagged. The second assumption that we use is that no more than 10% the samples may pass our critical value. If more than 10% pass the critical value, then we assume that our heuristics are not reasonable and we don't set any critical limit.

### Value

A list similar to [nmr\\_pca\\_outliers](#)

### See Also

```

---

nmr_ppm_resolution	<i>PPM resolution of the spectra</i>
--------------------	--------------------------------------

---

## Description

The function gets the ppm resolution of the dataset using the median of the difference of data points.

## Usage

```
nmr_ppm_resolution(nmr_dataset)

## S3 method for class 'nmr_dataset'
nmr_ppm_resolution(nmr_dataset)

## S3 method for class 'nmr_dataset_1D'
nmr_ppm_resolution(nmr_dataset)
```

## Arguments

nmr\_dataset     An object containing NMR samples

## Value

Numeric (the ppm resolution, measured in ppms)

## See Also

---

nmr\_read\_bruker\_fid     *Read Free Induction Decay file*

---

## Description

Reads an FID file. This is a very simple function.

## Usage

```
nmr_read_bruker_fid(sample_name, endian = "little")
```

## Arguments

sample_name	A single sample name
endian	Endianness of the fid file ("little" by default, use "big" if <code>acqus\$BYTORDA == 1</code> )

## Value

A numeric vector with the free induction decay values

## See Also

---

nmr_read_samples	<i>Read NMR samples</i>
------------------	-------------------------

---

### Description

These functions load samples from files and return a [nmr\\_dataset](#).

### Usage

```
nmr_read_samples_dir(  
  samples_dir,  
  format = "bruker",  
  pulse_sequence = NULL,  
  metadata_only = FALSE,  
  ...  
)
```

```
nmr_read_samples(  
  sample_names,  
  format = "bruker",  
  pulse_sequence = NULL,  
  metadata_only = FALSE,  
  ...  
)
```

### Arguments

<code>samples_dir</code>	A directory that contains multiple samples
<code>format</code>	Either "bruker" or "jdx"
<code>pulse_sequence</code>	If it is set to a pulse sequence ("NOESY", "JRES", "CPMG"...) it will only load the samples that match that pulse sequence.
<code>metadata_only</code>	A logical, to load only metadata (default: FALSE)
<code>...</code>	Arguments passed to <a href="#">read_bruker_sample()</a> for data loading
<code>sample_names</code>	A character vector with file or directory names.

### Value

a [nmr\\_dataset](#) object

### See Also

```

```
dir_to_demo_dataset <- system.file("dataset-demo", package = "AlpsNMR")
zip_files <- fs::dir_ls(dir_to_demo_dataset, glob = "*.zip")
dataset <- nmr_read_samples(sample_names = zip_files)
```

---

nmr\_zip\_bruker\_samples

*Create one zip file for each brucker sample path*

---

## Description

Create one zip file for each brucker sample path

## Usage

```
nmr_zip_bruker_samples(path, workdir, overwrite = FALSE, ...)
```

## Arguments

path	Character vector with sample directories
workdir	Directory to store zip files
overwrite	Should existing zip files be overwritten?
...	Passed to <a href="#">utils::zip</a>

## Value

A character vector of the same length as path, with the zip file names

## See Also

`permutation_test_model`*Permutation test*

---

### Description

Make permutations with data and default settings from an `nmr_data_analysis_method`

### Usage

```
permutation_test_model(  
  dataset,  
  y_column,  
  identity_column,  
  external_val,  
  internal_val,  
  data_analysis_method,  
  nPerm = 50  
)
```

### Arguments

<code>dataset</code>	An <a href="#">nmr_dataset_family</a> object
<code>y_column</code>	A string with the name of the y column (present in the metadata of the dataset)
<code>identity_column</code>	NULL or a string with the name of the identity column (present in the metadata of the dataset).
<code>external_val</code>	A list with two elements: <code>iterations</code> and <code>test_size</code> . See <a href="#">random_subsampling</a> for further details
<code>internal_val</code>	A list with two elements: <code>iterations</code> and <code>test_size</code> . See <a href="#">random_subsampling</a> for further details
<code>data_analysis_method</code>	An <a href="#">nmr_data_analysis_method</a> object
<code>nPerm</code>	number of permutations

### Value

A permutation matrix with permuted values

### Examples

```
# Data analysis for a table of integrated peaks  
  
## Generate an artificial nmr_dataset_peak_table:  
### Generate artificial metadata:  
num_samples <- 32 # use an even number in this example
```

```

num_peaks <- 20
metadata <- data.frame(
  NMRExperiment = as.character(1:num_samples),
  Condition = rep(c("A", "B"), times = num_samples/2),
  stringsAsFactors = FALSE
)

### The matrix with peaks
peak_means <- runif(n = num_peaks, min = 300, max = 600)
peak_sd <- runif(n = num_peaks, min = 30, max = 60)
peak_matrix <- mapply(function(mu, sd) rnorm(num_samples, mu, sd),
                      mu = peak_means, sd = peak_sd)
colnames(peak_matrix) <- paste0("Peak", 1:num_peaks)

## Artificial differences depending on the condition:
peak_matrix[metadata$Condition == "A", "Peak2"] <-
  peak_matrix[metadata$Condition == "A", "Peak2"] + 70

peak_matrix[metadata$Condition == "A", "Peak6"] <-
  peak_matrix[metadata$Condition == "A", "Peak6"] - 60

### The nmr_dataset_peak_table
peak_table <- new_nmr_dataset_peak_table(
  peak_table = peak_matrix,
  metadata = list(external = metadata)
)

methodology <- plsda_auroc_vip_method(ncomp = 3)
model <- nmr_data_analysis(
  peak_table,
  y_column = "Condition",
  identity_column = NULL,

)

p = permutation_test_model(peak_table,
                          y_column = "Condition",
                          identity_column = NULL,
                          external_val = list(iterations = 3, test_size = 0.25),
                          internal_val = list(iterations = 3, test_size = 0.25),
                          data_analysis_method = methodology,
                          nPerm = 10)

```

---

permutation\_test\_plot *Permutation test plot*

---

## Description

Plot permutation test using actual model and permuted models

**Usage**

```
permutation_test_plot(
  nmr_data_analysis_model,
  permMatrix,
  xlab = "AUCs",
  xlim,
  ylim = NULL,
  breaks = "Sturges",
  main = "Permutation test"
)
```

**Arguments**

nmr_data_analysis_model	A nmr_data_analysis_model
permMatrix	A permutation fitness outcome from permutation_test_model
xlab	optional xlabel
xlim	optional x-range
ylim	optional y-range
breaks	optional custom histogram breaks (defaults to 'sturges')
main	optional plot title (or TRUE for autoname)

**Value**

A plot with the comparison between the actual model versus the permuted models

**Examples**

```
# Data analysis for a table of integrated peaks

## Generate an artificial nmr_dataset_peak_table:
### Generate artificial metadata:
num_samples <- 32 # use an even number in this example
num_peaks <- 20
metadata <- data.frame(
  NMRExperiment = as.character(1:num_samples),

  internal_val = list(iterations = 3, test_size = 0.25),
  data_analysis_method = methodology,
  nPerm = 10)

permutation_test_plot(model, p)
```

---

Pipelines

*Pipelines*

---

### Description

Uses [nmr\\_pca\\_outliers\\_robust](#) to perform the detection of outliers

Normalize the full spectra to the internal calibrant region, then exclude that region and finally perform PQN normalization.

### Usage

```
pipe_load_samples(samples_dir, glob = "*0", output_dir = NULL)
```

```
pipe_add_metadata(nmr_dataset_rds, excel_file, output_dir)
```

```
pipe_interpolate_1D(nmr_dataset_rds, axis, output_dir)
```

```

pipe_exclude_regions(nmr_dataset_rds, exclude, output_dir)

pipe_outlier_detection(nmr_dataset_rds, output_dir)

pipe_filter_samples(nmr_dataset_rds, conditions, output_dir)

pipe_peakdet_align(
  nmr_dataset_rds,
  nDivRange_ppm = 0.1,
  scales = seq(1, 16, 2),
  baselineThresh = 0.01,
  SNR.Th = -1,
  maxShift_ppm = 0.0015,
  acceptLostPeak = FALSE,
  output_dir = NULL
)

pipe_peak_integration(
  nmr_dataset_rds,
  peak_det_align_dir,
  peak_width_ppm,
  output_dir
)

pipe_normalization(
  nmr_dataset_rds,
  internal_calibrant = NULL,
  output_dir = NULL
)

```

### Arguments

<code>samples_dir</code>	The directory where the samples are
<code>glob</code>	A wildcard aka globbing pattern (e.g. *.csv) passed on to <code>grep()</code> to filter paths.
<code>output_dir</code>	The output directory for this pipe element
<code>nmr_dataset_rds</code>	The <code>nmr_dataset.rds</code> file name coming from previous nodes
<code>excel_file</code>	<p>An excel file name. See details for the requirements</p> <p>The excel file can have one or more sheets. The excel sheets need to be as simple as possible: One header column on the first row and values below.</p> <p>Each of the sheets contain metadata that has to be integrated. The merge (technically a left join) is done using the first column of each sheet as key.</p> <p>In practical terms this means that the first sheet of the excel file <b>MUST</b> start with an "NMRExperiment" column, and as many additional columns to add (e.g. FluidXBarcode, SampleCollectionDate, TimePoint and SubjectID).</p> <p>The second sheet can have as the first column any of the already added columns, for instance the "SubjectID", and any additional columns (e.g. Gender, Age).</p>

	The first column on each sheet, named the key column, MUST have unique values. For instance, a sheet starting with "SubjectID" MUST specify each subject ID only once (without repetitions).
axis	The ppm axis range and optionally the ppm step
exclude	A list with regions to be removed Typically: <code>exclude = list(water = c(4.7, 5.0))</code>
conditions	A character vector with conditions to filter metadata. The conditions parameter should be a character vector of valid R logical conditions. Some examples: <ul style="list-style-type: none"> <li>• <code>conditions &lt;- 'Gender == "Female"'</code></li> <li>• <code>conditions &lt;- 'Cohort == "Chuv"'</code></li> <li>• <code>conditions &lt;- 'TimePoint %in% c("T0", "T31")'</code></li> <li>• <code>conditions &lt;- c(Cohort == "Chuv", 'TimePoint %in% c("T0", "T31")')</code></li> </ul> Only samples fulfilling all the given conditions are kept in further analysis.
nDivRange_ppm	Segment size, in ppms, to divide the spectra and search for peaks.
scales	The parameter of <code>peakDetectionCWT</code> function of <code>MassSpecWavelet</code> package, look it up in the original function.
baselineThresh	It will remove all peaks under an intensity set by <code>baselineThresh</code> . If you set it to 'NULL', <code>nmr_detect_peaks</code> will automatically compute an approximate value considering baseline between 9.5 and 10.0 ppm (automatic calculation using <code>baselineThresh = NULL</code> will not work if spectra were not interpolated up to 10.0 ppm)
SNR.Th	The parameter of <code>peakDetectionCWT</code> function of <code>MassSpecWavelet</code> package, look it up in the original function. If you set -1, the function will itself recompute this value.
maxShift_ppm	The maximum shift allowed, in ppm
acceptLostPeak	This is an option for users, TRUE is the default value. If the users believe that all the peaks in the peak list are true positive, change it to FALSE.
peak_det_align_dir	Output directory from <a href="#">pipe_peakdet_align</a>
peak_width_ppm	A peak width in ppm
internal_calibrant	A ppm range where the internal calibrant is, or NULL.

### Details

If there is no internal calibrant, only the PQN normalization is done.

### Value

This function saves the result to the output directory

This function saves the result to the output directory

This function saves the result to the output directory

This function saves the result to the output directory

This function saves the result to the output directory

Pipeline: Filter samples according to metadata conditions

### Examples

```
## Example of pipeline usage
## There are differet ways of load the dataset
dir_to_demo_dataset <- system.file("dataset-demo", package = "AlpsNMR")
#excel_file <- system.file("dataset-demo",
#                           "dummy_metadata.xlsx",
#                           package = "AlpsNMR")
#output_dir <- tempdir()

## Load samples with pipes
#pipe_load_samples(dir_to_demo_dataset,
#                  glob = "*.zip",
#                  output_dir = "../pipe_output")

## Another way to load it
#nmr_dataset <- nmr_read_samples_dir(dir_to_demo_dataset)

## Saving the dataset in a .rds file
#nmr_dataset_rds <- tempfile(fileext = ".rds")
#nmr_dataset_save(nmr_dataset, nmr_dataset_rds)

## Interpolation
#pipe_interpolate_1D(nmr_dataset_rds,
#                    axis = c(min = -0.5, max = 10, by = 2.3E-4),
#                    output_dir)

## Get the new path, based in output_dir
```

```
#nmr_dataset_rds <- paste(output_dir, "\", "nmr_dataset.rds", sep = "\", collapse = NULL)

## Adding metadata to samples
#pipe_add_metadata(nmr_dataset_rds = nmr_dataset_rds, output_dir = output_dir,
#                 excel_file = excel_file)

## Filtering samples
#conditions <- 'SubjectID == "Ana"'
#pipe_filter_samples(nmr_dataset_rds, conditions, output_dir)

## Outlier detection
#pipe_outlier_detection(nmr_dataset_rds, output_dir)

## Exclude regions
#exclude_regions <- list(water = c(5.1, 4.5))
#pipe_exclude_regions(nmr_dataset_rds, exclude_regions, output_dir)

## peak align
#pipe_peakdet_align(nmr_dataset_rds, output_dir = output_dir)

## peak integration
#pipe_peak_integration(nmr_dataset_rds,
#                      peak_det_align_dir = output_dir,
#                      peak_width_ppm = 0.006, output_dir)

## Normalization
#pipe_normalization(nmr_dataset_rds, output_dir = output_dir)
```

plot.nmr\_dataset\_1D *Plot an nmr\_dataset\_1D*

---

## Description

Plot an nmr\_dataset\_1D

## Usage

```
## S3 method for class 'nmr_dataset_1D'
plot(
  x,
  NMRExperiment = NULL,
  chemshift_range = NULL,
  interactive = FALSE,
  quantile_plot = NULL,
  quantile_colors = NULL,
  ...
)
```

**Arguments**

x	a <code>nmr_dataset_1D</code> object
NMRExperiment	A character vector with the NMRExperiments to include. Use "all" to include all experiments.
chemshift_range	range of the chemical shifts to be included. Can be of length 3 to include the resolution in the third element (e.g. <code>c(0.2, 0.8, 0.005)</code> )
interactive	if TRUE return an interactive plotly plot, otherwise return a ggplot one.
quantile_plot	If TRUE plot the 10\ If two numbers between 0 and 1 are given then a custom percentile can be plotted
quantile_colors	A vector with the colors for each of the quantiles
...	arguments passed to <code>ggplot2::aes_string</code> .

**Value**

The plot

**See Also**

**Examples**

```
dir_to_demo_dataset <- system.file("dataset-demo", package = "AlpsNMR")
#dataset <- nmr_read_samples_dir(dir_to_demo_dataset)
#dataset_1D <- nmr_interpolate_1D(dataset, axis = c(min = -0.5, max = 10, by = 2.3E-4))
#plot(dataset_1D)
```

---

plot\_bootstrap\_multimodel

*Bootstrap plot predictions*

---

**Description**

Bootstrap plot predictions

**Usage**

```
plot_bootstrap_multimodel(bp_results, dataset, y_column, plot = TRUE)
```

**Arguments**

bp_results	bp_kfold_VIP_analysis results
dataset	An <a href="#">nmr_dataset_family</a> object
y_column	A string with the name of the y column (present in the metadata of the dataset)
plot	A boolean that indicate if results are plotted or not

**Value**

A plot of the results or a ggplot object

**Examples**

```
# Data analysis for a table of integrated peaks

```

---

plot\_webgl

*Plot a dataset into a HTML file*

---

## Description

Uses WebGL for performance

## Usage

```
plot_webgl(nmr_dataset, html_filename, ...)
```

## Arguments

nmr_dataset	An <a href="#">nmr_dataset_1D</a>
html_filename	The output HTML filename to be created
...	Arguments passed on to <a href="#">plot.nmr_dataset_1D</a>
	x a <a href="#">nmr_dataset_1D</a> object
chemshift_range	range of the chemical shifts to be included. Can be of length 3 to include the resolution in the third element (e.g. <code>c(0.2, 0.8, 0.005)</code> )
NMRExperiment	A character vector with the NMRExperiments to include. Use "all" to include all experiments.
quantile_plot	If TRUE plot the 10\ If two numbers between 0 and 1 are given then a custom percentile can be plotted
quantile_colors	A vector with the colors for each of the quantiles
interactive	if TRUE return an interactive plotly plot, otherwise return a ggplot one.

**Value**

the html filename created

---

plsda\_aucroc\_vip\_compare

*Compare PLSDA aucroc VIP results*

---

**Description**

Compare PLSDA aucroc VIP results

**Usage**

```
plsda_aucroc_vip_compare(...)
```

**Arguments**

... Results of [nmr\\_data\\_analysis](#) to be combined. Give each result a name.

**Value**

A plot of the AUC for each method

**Examples**

```

# Data analysis for a table of integrated peaks

## Generate an artificial nmr_dataset_peak_table:
### Generate artificial metadata:
num_samples <- 32 # use an even number in this example
num_peaks <- 20
metadata <- data.frame(
  NMRExperiment = as.character(1:num_samples),
  Condition = rep(c("A", "B"), times = num_samples/2),
  stringsAsFactors = FALSE
)

### The matrix with peaks

```

---

plsda\_auroc\_vip\_method

*Method for nmr\_data\_analysis (PLSDA model with AUROC and VIP outputs)*

---

### Description

Method for nmr\_data\_analysis (PLSDA model with AUROC and VIP outputs)

### Usage

```
plsda_auroc_vip_method(ncomp, auc_increment_threshold = 0.05)
```

### Arguments

ncomp                   Max. number of latent variables to explore in the PLSDA analysis

auc\_increment\_threshold           Choose the number of latent variables when the AUC does not increment more than this threshold.

### Value

Returns an object to be used with [nmr\\_data\\_analysis](#) to perform a (optionally multilevel) PLS-DA model, using the area under the ROC curve as figure of merit to determine the optimum number of latent variables.

### Examples

```
method <- plsda_auroc_vip_method(3)
```

---

ppm_resolution	<i>Unlisted PPM resolution</i>
----------------	--------------------------------

---

**Description**

A wrapper to unlist the output from the function `nmr_ppm_resolution(nmr_dataset)` when no interpolation has been applied.

**Usage**

```
ppm_resolution(nmr_dataset)
```

**Arguments**

`nmr_dataset` An object containing NMR samples

**Value**

A number (the ppm resolution, measured in ppms)

Numeric (the ppm resolution, measured in ppms)

**Examples**

```
nmr_dataset <- nmr_dataset_load(system.file("extdata", "nmr_dataset.rds", package = "AlpsNMR"))
nmr_ppm_resolution(nmr_dataset)
```

---

ppm_VIP_vector	<i>Feature selection and validation in multivariate analysis</i>
----------------	--

---

**Description**

Numeric VIPs vector

**Usage**

```
ppm_VIP_vector(VIPs)
```

**Arguments**

`VIPs` a dataframe from the `model_VIP(MVObj)` function. It requires a "ppms" variable

**Details**

The function extracts the VIPs vector (numeric) from the `model_VIP(MVObj)` function. It is not necessary if you have the ppm values in a numeric vector. This is needed in case that an automated pipeline is applied, connecting the output from `model_VIP(MVObj)` to `nmr_identify_regions` family functions.

**Value**

a numeric ppm vector ready to be identified with `nmr_identify_regions_blood`, `nmr_identify_cell` or `nmr_identify_regions_urine`

**Examples**

```
message("Deprecated. MUVR is not compatible with Bioconductor,  
use bp_kfold_VIP_analysis method instead")
```

---

```
print.nmr_dataset      Print for nmr_dataset
```

---

**Description**

Print for `nmr_dataset`

**Usage**

```
## S3 method for class 'nmr_dataset'  
print(x, ...)
```

**Arguments**

<code>x</code>	an <code>nmr_dataset</code> object
<code>...</code>	for future use

**Value**

Print for `nmr_dataset`

**See Also**

```

---

p_value_perm	<i>Deprecated function p-Value from permutation test</i>
--------------	--

---

**Description**

The function calculates the cumulative (1-tailed) probability of 'actual' belonging to 'h0' (permutation\_object from the permutation\_test\_model function).

**Usage**

```
p_value_perm(model_actual, permutation_object)
```

**Arguments**

model\_actual    The actual model performance (e.g. misclassifications or Q2)  
permutation\_object    Null hypothesis distribution from permutation test from permutation\_test\_model function

**Value**

The p-value indicating if there is significant differences between the model performance and the null hypothesis distribution from permutation test test

**Examples**

```
message("MUVR is not compatible with Bioconductor,  
use bp_kfold_VIP_analysis method instead")
```

---

random_subsampling	<i>Random subsampling</i>
--------------------	---------------------------

---

**Description**

Random subsampling

**Usage**

```
random_subsampling(  
  sample_idx,  
  iterations = 10L,  
  test_size = 0.25,  
  keep_together = NULL,  
  balance_in_train = NULL  
)
```

**Arguments**

sample_idx	Typically a numeric vector with sample index to be separated. A character vector with sample IDs could also be used
iterations	An integer, the number of iterations in the random subsampling
test_size	A number between 0 and 1. The samples to be included in the test set on each iteration.
keep_together	Either NULL or a factor with the same length as sample_idx. keep_together can be used to ensure that groups of samples are kept in together in all iterations (either on training or on test, but never split). A typical use case for this is when you have sample replicates and you want to keep all replicates together to prevent overoptimistic results (having one sample on the train subset and its replicate on the test subset would make the prediction easier to guess). Another use case for this is when you have a longitudinal study and you want to keep some subjects in the same train or test group, because you want to use some information in a longitudinal way (e.g. a multilevel plsda model).
balance_in_train	Either NULL or a factor with the same length as sample_idx. balance_in_train can be used to force that on each iteration, the train partition contains the same number of samples of the given factor levels. For instance, if we have a dataset with 40 samples of class "A" and 20 samples of class "B", using a test_size = 0.25, we can force to always have 16 samples of class "A" and 16 samples of class "B" in the training subset. This is beneficial to those algorithms that require that the training groups are balanced.

**Value**

A list of length equal to iterations. Each element of the list is a list with two entries (training and test) containing the sample\_idx values that will belong to each subset.

**Examples**

```
random_subsampling(1:100, iterations = 4, test_size = 0.25)

subject_id <- c("Alice", "Bob", "Charlie", "Eve")
random_subsampling(1:4, iterations = 2, test_size = 0.25, keep_together = subject_id)
```

---

rdCV\_PLS\_RF

*Deprecated function*

---

**Description**

Deprecated function

**Usage**

```
rdCV_PLS_RF(nmr_peak_table)
```

**Arguments**

`nmr_peak_table` an AlpsNMR integration object (2 classes)

**Value**

a MUVR model containing selection parameters, validation and fitness

**References**

Shi,L. et al. (2018) Variable selection and validation in multivariate modelling. *Bioinformatics*.

**See Also**

`nmr_data_analysis` Feature selection and validation in multivariate analysis

Statistical analysis and feature selection in a repeated double cross-validation frame based on the partial least squares (PLS) or random forest (RF) analyses using an algorithm for multivariate modelling with minimally biased variable selection (MUVR) from the MUVR package. If your work with a `nmr_peak_table` object from AlpsNMR, first you need to extract the X data from the main `nmr_dataset` object (e.g. your peak table) with the `nmr_data` function, otherwise you would try to set a list on the X. You also need to set the class from this object, or just set it from another Y vector.

Other `nmr_dataset_1D` functions: `[.nmr_dataset_1D()`, `computes_peak_width_ppm()`, `file_listener()`, `files_to_rDolphin()`, `format.nmr_dataset_1D()`, `is.nmr_dataset_1D()`, `load_and_save_functions`, `new_nmr_dataset_1D()`, `nmr_align_find_ref()`, `nmr_baseline_removal()`, `nmr_baseline_threshold()`, `nmr_exclude_region()`, `nmr_integrate_regions()`, `nmr_interpolate_1D()`, `nmr_meta_add()`, `nmr_meta_export()`, `nmr_meta_get_column()`, `nmr_meta_get()`, `nmr_normalize()`, `nmr_pca_build_model()`, `nmr_pca_outliers_filter()`, `nmr_pca_outliers_plot()`, `nmr_pca_outliers_robust()`, `nmr_pca_outliers()`, `nmr_ppm_resolution()`, `plot.nmr_dataset_1D()`, `plot_webgl()`, `print.nmr_dataset_1D()`, `rdCV_PLS_RF_ML()`, `save_files_to_rDolphin()`, `to_ChemoSpec()`, `validate_nmr_dataset_peak_table()`, `validate_nmr_dataset()`

**Examples**

```
message("Deprecated. MUVR is not compatible with Bioconductor,
use bp_kfold_VIP_analysis method instead")
```

---

rdCV_PLS_RF_ML	<i>Deprecated function Feature selection and validation in MULTI-LEVEL analysis</i>
----------------	---

---

**Description**

Statistical analysis and feature selection in a repeated double cross-validation frame based on the partial least squares (PLS) or random forest (RF) analyses using an algorithm for multivariate modelling with minimally biased variable selection (MUVR) from the MUVR package. The function `rdCV_PLS_RF_ML` allows the multilevel comparison, especially useful in crossover or longitudinal studies (2 timepoints) considering the same individual (it requires 2 samples of the same observation).

**Usage**

```
rdCV_PLS_RF_ML(nmr_peak_table)
```

**Arguments**

nmr\_peak\_table an AlpsNMR integration object (2 classes)

**Value**

a MUVR model containing selection parameters, validation and fitness

**References**

Shi,L. et al. (2018) Variable selection and validation in multivariate modelling. *Bioinformatics*.

**See Also**

**Examples**

```
message("Deprecated. MUVR is not compatible with Bioconductor,  
use bp_kfold_VIP_analysis method instead")
```

---

read\_bruker\_sample      *Read a Bruker sample directory*

---

**Description**

Read a Bruker sample directory

**Usage**

```
read_bruker_sample(  
  sample_path,  
  pdata_file = NULL,  
  pdata_path = "pdata/1",  
  all_components = FALSE  
)
```

**Arguments**

sample_path	A character path of the sample directory
pdata_file	File name of the binary NMR data to load. Usually "1r". If it is null it is autodetected and all files are loaded.
pdata_path	Path from sample_path to the preprocessed data
all_components	If FALSE load only the real component. Otherwise load all of them

**Value**

a list with all the bruker sample information

---

regions\_from\_peak\_table

*Build list of regions for peak integration*

---

**Description**

Build list of regions for peak integration

**Usage**

```
regions_from_peak_table(peak_pos_ppm, peak_width_ppm)
```

**Arguments**

peak_pos_ppm	The peak positions, in ppm
peak_width_ppm	The peak widths (or a single peak width for all peaks)

**Value**

A list of regions suitable for [nmr\\_integrate\\_regions](#)

**See Also**

---

ROI\_blood

*ROIs for blood (plasma/serum) samples*

---

### **Description**

The template ROI\_blood contains the targeted list of metabolites to be quantified (blood samples)

### **References**

[github.com/danielcanueto/rDolphin](https://github.com/danielcanueto/rDolphin)

---

ROI\_cell

*ROIs for cell samples*

---

### **Description**

The template ROI\_cell contains the targeted list of metabolites to be quantified (cell samples)

### **References**

[github.com/danielcanueto/rDolphin](https://github.com/danielcanueto/rDolphin)

---

ROI\_urine

*ROIs for urine samples*

---

### **Description**

The template ROI\_urine contains the targeted list of metabolites to be quantified (urine samples)

### **References**

[github.com/danielcanueto/rDolphin](https://github.com/danielcanueto/rDolphin)

---

`save_files_to_rDolphin`*Save files to rDolphin*

---

## Description

The function saves the CSV files required by `to_rDolphin` and `Automatic_targeted_profiling` functions for metabolite profiling.

## Usage

```
save_files_to_rDolphin(files_rDolphin, output_directory)
```

## Arguments

`files_rDolphin` a list containing 4 elements from `files_to_rDolphin`

- `meta_rDolphin`: metadata in rDolphin format,
- `NMR_spectra`: spectra matrix
- `ROI`: ROI template
- `Parameters_blood`: parameters file

`output_directory`

a directory in which the CSV files are saved

## Value

CSV files containing:

## See Also

nmr_dataset <- nmr_read_samples_dir(dataset)
files_rDolphin = files_to_rDolphin_blood(nmr_dataset)
output_directory = "."
save_files_to_rDolphin(files_rDolphin, output_directory)

## End(Not run)
```

---

save\_profiling\_output *Save rDolphin output*

---

## Description

The function saves the output from Automatic\_targeted\_profiling function in CSV format.

## Usage

```
save_profiling_output(targeted_profiling, output_directory)
```

## Arguments

targeted\_profiling  
A list from Automatic\_targeted\_profiling function

output\_directory  
a directory in which the CSV files are saved

## Value

rDolphin output from Automatic\_targeted\_profiling function:

- metabolites\_intensity
- metabolites\_quantification
- ROI\_profiles\_used
- chemical\_shift
- fitting\_error
- half\_bandwidth
- signal\_area\_ratio

## See Also

SummarizedExperiment\_to\_nmr\_dataset\_peak\_table

*Import SummarizedExperiment as mr\_dataset\_peak\_table*

---

## Description

Import SummarizedExperiment as mr\_dataset\_peak\_table

## Usage

```
SummarizedExperiment_to_nmr_dataset_peak_table(se)
```

## Arguments

se                    An SummarizedExperiment object

## Value

nmr\_dataset\_peak\_table An [nmr\\_dataset\\_peak\\_table](#) object (unmodified)

## Examples

```
dir_to_demo_dataset <- system.file("dataset-demo", package = "AlpsNMR")
dataset <- nmr_read_samples_dir(dir_to_demo_dataset)
dataset_1D <- nmr_interpolate_1D(dataset, axis = c(min = -0.5, max = 10, by = 2.3E-4))
meta <- file.path(dir_to_demo_dataset, "dummy_metadata.xlsx")
metadata <- readxl::read_excel(meta, sheet = 1)
dataset_1D <- nmr_meta_add(dataset_1D, metadata = metadata, by = "NMRExperiment")
metadata <- list(external = dataset_1D[["metadata"]][["external"]])
peak_table <- nmr_data(dataset_1D)
nmr_peak_table <- new_nmr_dataset_peak_table(peak_table, metadata)
se <- nmr_dataset_peak_table_to_SummarizedExperiment(nmr_peak_table)
nmr_peak_table <- SummarizedExperiment_to_nmr_dataset_peak_table(se)
```

---

SummarizedExperiment\_to\_nmr\_data\_1r  
*Import SummarizedExperiment as 1D NMR data*

---

**Description**

Import SummarizedExperiment as 1D NMR data

**Usage**

```
SummarizedExperiment_to_nmr_data_1r(se)
```

**Arguments**

se                    An SummarizedExperiment object

**Value**

nmr\_dataset An [nmr\\_dataset\\_1D](#) object (unmodified)

**Examples**

```
dir_to_demo_dataset <- system.file("dataset-demo", package = "AlpsNMR")
dataset <- nmr_read_samples_dir(dir_to_demo_dataset)
dataset_1D <- nmr_interpolate_1D(dataset, axis = c(min = -0.5, max = 10, by = 2.3E-4))
se <- nmr_data_1r_to_SummarizedExperiment(dataset_1D)
dataset_1D <- SummarizedExperiment_to_nmr_data_1r(se)
```

---

to\_ChemoSpec                    *Convert to ChemoSpec Spectra class*

---

**Description**

Convert to ChemoSpec Spectra class

**Usage**

```
to_ChemoSpec(nmr_dataset, desc = "A nmr_dataset")
```

**Arguments**

nmr\_dataset            An [nmr\\_dataset\\_1D](#) object  
desc                    a description for the dataset

**Value**

A Spectra object from the ChemoSpec package

## See Also

```

---

`validate_nmr_dataset`    *Validate nmr\_dataset objects*

---

## Description

Validate `nmr_dataset` objects

Validate 1D `nmr_dataset`s

## Usage

```
validate_nmr_dataset(samples)
```

```
validate_nmr_dataset_1D(nmr_dataset_1D)
```

## Arguments

`samples`            An `nmr_dataset` object

`nmr_dataset_1D`    An [nmr\\_dataset\\_1D](#) object

## Value

Validate `nmr_dataset` objects

The [nmr\\_dataset\\_1D](#) unchanged

This function is useful for its side-effects. Stopping in case of error

validate_nmr_dataset_family(dataset_1D)
```

---

`validate_nmr_dataset_peak_table`

*Validate nmr\_dataset\_peak\_table objects*

---

## Description

The function detects peaks on an `nmr_dataset_1D` object, using `speaq::detectSpecPeaks`. `detectSpecPeaks` divides the whole spectra into smaller segments and uses `MassSpecWavelet::peakDetectionCWT` for peak detection.

This function is based on `speaq::dohCluster`.

The function allows the integration of a given ppm vector with a specific width.

## Usage

```
validate_nmr_dataset_peak_table(nmr_dataset_peak_table)
```

```
nmr_detect_peaks(  
  nmr_dataset,  
  nDivRange_ppm = 0.1,  
  scales = seq(1, 16, 2),  
  baselineThresh = NULL,  
  SNR.Th = 3  
)
```

```

nmr_detect_peaks_plot(nmr_dataset, peak_data, NMRExperiment, ...)

nmr_detect_peaks_tune_snr(
  ds,
  NMRExperiment = NULL,
  SNR_thresholds = seq(from = 2, to = 6, by = 0.1)
)

nmr_align(
  nmr_dataset,
  peak_data,
  NMRExp_ref = NULL,
  maxShift_ppm = 0.0015,
  acceptLostPeak = FALSE
)

nmr_integrate_peak_positions(
  samples,
  peak_pos_ppm,
  peak_width_ppm = 0.006,
  ...
)

get_integration_with_metadata(integration_object)

```

### Arguments

<code>nmr_dataset_peak_table</code>	An <a href="#">nmr_dataset_peak_table</a> object
<code>nmr_dataset</code>	An <a href="#">nmr_dataset_ID</a>
<code>nDivRange_ppm</code>	Segment size, in ppms, to divide the spectra and search for peaks.
<code>scales</code>	The parameter of <code>peakDetectionCWT</code> function of <code>MassSpecWavelet</code> package, look it up in the original function.
<code>baselineThresh</code>	It will remove all peaks under an intensity set by <code>baselineThresh</code> . If you set it to 'NULL', <code>nmr_detect_peaks</code> will automatically compute an approximate value considering baseline between 9.5 and 10.0 ppm (automatically calculation using <code>baselineThresh = NULL</code> will not work if spectra were not interpolated up to 10.0 ppm)
<code>SNR.Th</code>	The parameter of <code>peakDetectionCWT</code> function of <code>MassSpecWavelet</code> package, look it up in the original function. If you set -1, the function will itself recompute this value.
<code>peak_data</code>	The detected peak data given by <a href="#">nmr_detect_peaks</a> .
<code>NMRExperiment</code>	A string with the single <code>NMRExperiment</code> used explore the SNR thresholds. If not given, use the first one.
<code>...</code>	Arguments passed on to <a href="#">nmr_integrate_regions</a>

	regions	A named list. Each element of the list is a region, given as a named numeric vector of length two with the range to integrate. The name of the region will be the name of the column
ds		An <a href="#">nmr_dataset_1D</a> dataset
SNR_thresholds		A numeric vector with the SNR thresholds to explore
NMRExp_ref		NMRExperiment of the reference to use for alignment
maxShift_ppm		The maximum shift allowed, in ppm
acceptLostPeak		This is an option for users, TRUE is the default value. If the users believe that all the peaks in the peak list are true positive, change it to FALSE.
samples		A <a href="#">nmr_dataset</a> object
peak_pos_ppm		The peak positions, in ppm
peak_width_ppm		The peak widths (or a single peak width for all peaks)
integration_object		A <a href="#">nmr_dataset</a> object

## Value

The [nmr\\_dataset\\_peak\\_table](#) unchanged

This function is useful for its side-effects: Stopping in case of error

A data frame with the NMRExperiment, the sample index, the position in ppm and index and the peak intensity

Plot peak detection results

A list with the following elements:

- `peaks_detected`: A data frame with the columns from the [nmr\\_detect\\_peaks](#) output and an additional column `SNR_threshold` with the threshold used on each row.
- `num_peaks_per_region`: A summary of the `peaks_detected` table, with the number of peaks detected on each chemical shift region
- `plot_num_peaks_per_region`: A visual representation of `num_peaks_per_region`
- `plot_spectrum_and_detections`: A visual representation of the spectrum and the peaks detected with each SNR threshold. Use [plotly::ggplotly](#) or [plot\\_interactive](#) on this to zoom and explore the results.

An [nmr\\_dataset\\_1D](#), with the spectra aligned

Integrate peak positions

Get integrals with metadata from integrate peak positions

integration dataframe

## Parallelization

This function accepts parallelization with future strategies. You can use `plan(multiprocess)` or `plan(sequential)` before calling this function to determine if it should be parallelized or not.

```

---

[.nmr\_dataset

*Extract parts of an nmr\_dataset*

---

## Description

Extract parts of an nmr\_dataset

## Usage

```
## S3 method for class 'nmr_dataset'
x[i]
```

## Arguments

x            an [nmr\\_dataset](#) object  
i            indices of the samples to keep

**Value**

an `nmr_dataset` with the extracted samples

**See Also**

Other subsetting functions: `[.nmr_dataset_1D()`, `[.nmr_dataset_peak_table()`, `filter.nmr_dataset_family()`, `nmr_pca_outliers_filter()`

Other `nmr_dataset` functions: `format.nmr_dataset()`, `load_and_save_functions`, `new_nmr_dataset()`, `nmr_interpolate_1D()`, `nmr_meta_add()`, `nmr_meta_export()`, `nmr_meta_get_column()`, `nmr_meta_get()`, `nmr_ppm_resolution()`, `nmr_read_samples()`, `print.nmr_dataset()`, `validate_nmr_dataset()`

**Examples**

```
dir_to_demo_dataset <- system.file("dataset-demo", package = "AlpsNMR")
dataset <- nmr_read_samples_dir(dir_to_demo_dataset)
dataset2 <- dataset[1:3] # get the first 3 samples
```

---

[.nmr\_dataset\_1D      *Extract parts of an nmr\_dataset\_1D*

---

**Description**

Extract parts of an `nmr_dataset_1D`

**Usage**

```
## S3 method for class 'nmr_dataset_1D'
x[i]
```

**Arguments**

`x`                    an `nmr_dataset_1D` object  
`i`                     indices of the samples to keep

**Value**

an `nmr_dataset_1D` with the extracted samples
