Bioconductor Award **2020**

Certificate

Lori Shepherd

For outstanding contributions to the Bioconductor project and community

Lori has provided outstanding contributions to Bioconductor on many different fronts. She has led the establishment of the ExperimentHub and BiocFileCache, which facilitate broader usage and access to experimental data in Bioconductor. She has also made major contributions to the project by leading the effort to update the support site, which is one of the main ways that users interact with Bioconductor, as well as by managing the single package builder and contributing to the ingestion and evaluation of new packages. In addition to the technical contributions, Lori is very active in the Bioconductor community, including as a founding member of the Community Advisory Board, via social media outreach, and by showing a strong commitment to the organization of the annual Bioconductor conference.

Boston, July 2020
