Package 'SpikeInSubset'

March 5, 2026

Title Part of Affymetrix's Spike-In Experiment Data

Version 1.50.0

Author Rafael Irizarry <rafa@ds.dfci.harvard.edu> and Zhijin Wu

Maintainer Robert D Shear <rshear@ds.dfci.harvard.edu>

URL https://bioconductor.org/packages/SpikeInSubset

BugReports https://github.com/rafalab/SpikeInSubset/issues

Description
 Includes probe-level and expression data for the HGU133 and HGU95 spike-in experiments

License LGPL

Depends R (>= 2.4.0), Biobase (>= 2.5.5), affy (>= 1.23.4)

hgu133a.spikein.xhyb   *Cross hybridizers*

Description

Probe Sets likely to crosshybridize to spiked-in probesets in the Affymetrix HGU133A spike in

This objact is list. Each component of the list contains probeset names of possible crosshybridizers. The sequences of each spiked-in clone were collected and blasted against all HG-U133A target sequences. Target sequences are the ~600bp regions from which probes were selected. Thresholds of 100, 150 and 200bp were used and define the three components of the list.

Usage

```
data(hgu133a.spikein.xhyb)
```

Format

A list

SpikeIn   *Subset of Affymetrix SpikeIn Experiment Data*

Description

Probe-level and pre-proecssed data for six arrays (two triplicates) from the HGU95 and HGU133 SpikeIn experiments.

Usage

```
data(spikein95)
data(rma95)
data(mas95)

data(spikein133)
data(rma133)
data(mas133)
```

Format

SpikeIn is ProbeSet containing the PM and MM intensities for a gene spiked in at different concentrations. Use pData to see the cosntrations.

Source

spikein95 and spikein133 are instances of [ProbeSet](#) with the probe-level data for six arrays (two triplicates) from the HGU95 and HGU133 SpikeIn experiments respectively. rma95 and rma133 contain the data pre-processed with RMA. mas95 and mas133 contain the data preprocssed with mas5 (expression and present/absent calls). The calls are in objects called pacalls95 and pacalls133.
