

# The romanbar package

H.-Martin Münch  
<Martin.Muench at Uni-Bonn.de>

2025-01-28 v1.0g

## Abstract

This L<sup>A</sup>T<sub>E</sub>X package allows to write Roman numbers (or any other text) with horizontal bars. Additionally, commands for converting Arabic numbers into Roman ones are provided and an `\ifnumeric` test function.

# 1 Introduction

This L<sup>A</sup>T<sub>E</sub>X package allows to write Roman numbers (or any other text) with horizontal bars. Additionally, commands for converting Arabic numbers into Roman ones are provided and an `\ifnumeric` test function.

## 2 Usage

Just load the package placing

```
\usepackage{romanbar}
```

in the preamble of your L<sup>A</sup>T<sub>E</sub>X 2<sub>ε</sub> source file.

`\Romanbar{...}` then produces a Roman number with bars (please see the example file). `\romannum{...}` turns an Arabic number into a lowercase Roman one, and `\Romannum{...}` turns an Arabic number into an uppercase Roman one. `\ifnumeric{test}{true}{false}` tests for `test` being numeric.

## Options

`options`     The `romanbar` package takes no options.

## 3 Alternatives

- the original code written by Prof. Enrico Gregorio (<https://profs.sci.univr.it/~gregorio/>), <https://tex.stackexchange.com/a/24084>

```
\def\barroman#1{\sbox0{#1}\dimen0=\dimexpr\wd0+1pt\relax
\makebox[\dimen0]{\rlap{\vrule width\dimen0 height 0.06ex depth 0.06ex}%
\rlap{\vrule width\dimen0 height\dimexpr\ht0+0.03ex\relax
depth\dimexpr-\ht0+0.09ex\relax}%
\kern.5pt#1\kern.5pt}}
```

```
\barroman{I} \barroman{XI}
```

- Some fonts provide single characters for Roman numerals, cf. e.g. <https://tex.stackexchange.com/q/38695>. With T<sub>E</sub>X-engines like LuaL<sup>A</sup>T<sub>E</sub>X and X<sub>Y</sub>L<sup>A</sup>T<sub>E</sub>X unicode can be used directly if an according font is used (e.g. `\usepackage{fontspec}\usepackage{libertine}`).

(You programmed or found another alternative, which is available at <https://www.ctan.org/>?)

OK, send an e-mail to me with the name, location at <https://www.ctan.org/>, and a short notice, and I will probably include it in the list above.)

## 4 Example

```
1 (*example)
2 \NeedsTeXFormat{LaTeX2e}[2024-11-01]
3 \documentclass[british]{article}[2024/06/29]% v1.4n
4 \usepackage[extension=pdf,%
5 plainpages=false,%
6 pdfpagelabels=true,%
7 hyperindex=false,%
8 pdflang={en},%
9 pdftitle={romanbar package example},%
10 pdfauthor={H.-Martin Muench},%
11 pdfsubject={Example for the romanbar package},%
12 pdfkeywords={LaTeX, romanbar, roman, Roman, bars},%
13 pdfview=Fit,pdfstartview=Fit,%
14 pdfpagelayout=SinglePage%
15 ]{hyperref}[2024-11-05]% v7.011
16 \usepackage{romanbar}[2025-01-28]% v1.0g
17 \listfiles
18 \begin{document}
19 \pagenumbering{arabic}
20 \section*{Example for romanbar}
21
22 This example demonstrates the use of package\newline
23 \textsf{romanbar}, v1.0g as of 2025-01-28.\newline
24 There are no options to be used.\newline
25
26 \noindent For more details please see the documentation!
27
28 \noindent This package provides the command \verb|\Romanbar|
29 to print bars below and over the following:
30
31 \begin{description}
32 \item[-] Roman numbers: \verb|\Romanbar{MMXXV}| prints \Romanbar{MMXXV}
33
34 \item[-] Arabic numbers turned into upper-case Roman numbers:\newline
35         \verb|\Romanbar{2025}| prints \Romanbar{2025}
36
37 \item[-] negative Arabic numbers turned into upper-case Roman numbers
38         \newline
39         (although historically there were no negative Roman numbers):
40         \newline
41         \verb|\Romanbar{-25}| prints \Romanbar{-25}
42
43 \item[-] zero Arabic number ($0$; although historically
44         there was no Roman zero):\newline
45         \verb|\Romanbar{0}| prints \Romanbar{0}
46
47 \item[-] some arbitrary text:
48         \verb|\Romanbar{Caesar}| prints \Romanbar{Caesar}\newline
49         (with descenders: \Romanbar{AgjppqyW})
50
51 \newcounter{example}
52 \setcounter{example}{25}
53
54 \item[-] some counter's value:
55         \verb|\Romanbar{\theexample}| prints \Romanbar{\theexample}
56         \newline
57         (where the value of \texttt{example} is \theexample)
58
59 \item[-] Arabic numbers, without turning them into upper-case Roman
60         numbers:\newline
61         \verb|\Romanbar{\relax 2025}| prints \Romanbar{\relax 2025}
```

```

62 \end{description}
63
64 Special care was taken for "L" (50), e.\,g.\~in 555/DLV: \Romanbar{555}.
65
66 \verb|\romannum{...}| converts an Arabic number into a lower-case Roman one,
67 e.\,g.\~\verb|\romannum{2025}| prints \romannum{2025}, and
68 \verb|\Romannum{...}| converts an Arabic number into an upper-case Roman one,
69 e.\,g.\~\verb|\Romannum{2025}| prints \Romannum{2025}.
70 \end{document}
71 \end{example}

```

## 5 The implementation

We start off by checking that we are loading into L<sup>A</sup>T<sub>E</sub>X 2<sub>ε</sub> and announcing the name and version of this package.

```

72 (*package)
73 \NeedsTeXFormat{LaTeX2e}[2024-11-01]
74 \ProvidesPackage{romanbar}[2025-01-28 v1.0g Roman numbers with bars (HMM)]

```

A short description of the romanbar package:

```

75 %% Allows to write Roman numbers (or any other text) with bars
76 %% and to convert Arabic numbers into Roman ones.

```

There are no options to be processed.

```

77
78 \RequirePackage{trimclip}[2020/08/19]% v1.2
79
80 \newcounter{romanbarcount}
81 \newdimen\romanbardimH
82 \newdimen\romanbardimD
83 \newdimen\romanbardimW
84

```

`\gobbleminus` A command to gobble a possible minus sign is needed and `\gobbleminus` from <https://texfaq.org/FAQ-isitanum> is used.

```

85 \def\gobbleminus#1{\ifx-#1\else#1\fi}
86 %% from https://texfaq.org/FAQ-isitanum
87

```

`\ifnumeric` We want to test whether the argument passed to `\Romanbar` is numeric and therefore define `\ifnumeric{test}{true}{false}`, where `test` is to be analysed, `true` is the code to be executed, if `test` is numeric, and `false` is the code to be executed, if `test` is not numeric. This is done similar to <https://tex.stackexchange.com/a/17119>.

```

88 \newcommand{\ifnumeric}[3]{%
89 %% similar to https://tex.stackexchange.com/a/17119
90 \sbox\z@{\c@romanbarcount=0\gobbleminus#1\relax}%
91 \ifdim\wd0>\z@\relax#3% is not numeric
92 \else#2% is numeric
93 \fi%
94 }
95

```

`\r@iseL` We define `\r@iseL` to raise any L (50), otherwise a good deal of the horizontal part of the letter would be swallowed by the lower bar under the “number”.

```

96 \def\r@iseL#1{\ifx @#1% then terminate
97 \else%
98 \if L#1\raisebox{0.05ex}{\begin{clipbox}{0pt 0pt 0pt 0.05ex}L\end{clipbox}}%
99 \else #1\fi%

```

```

100 \expandafter\r@iseL%
101 \fi%
102 }
103

```

`\Romanbar` We define the `\Romanbar` command.

```

104 \DeclareRobustCommand{\Romanbar}[1]{%
105 \ifnumeric{#1}{% is numeric

```

If its parameter is numeric, the temporary counter `romanbarcount` is set to the value.

```

106 \setcounter{romanbarcount}{#1}%

```

Regularly there are no non-positive Roman numbers, therefore we do some trick similar to `\XRoman` from the <https://ctan.org/pkg/pageslts> package.

```

107 %% similar to \XRoman from the https://ctan.org/pkg/pageslts package
108 \ifnum\theromanbarcount<1%
109 \ifnum #1>0\relax%
110 \Roman@bar{\Roman{#1}}%
111 \else%
112 \ifnum #1<0\relax%
113 -\Roman@bar{\expandafter\@slowromancap\romannumeral\number-#1@}%
114 \else%
115 \Roman@bar{0}%
116 \fi%
117 \fi%
118 \else\Roman@bar{\@Roman\c@romanbarcount}%
119 \fi%
120 }{% is not numeric
121 \Roman@bar{#1}%
122 }%
123 }
124

```

`\Roman@bar` Whether it is numeric or not, in the end `\Roman@bar` is applied to it.

```

125 \DeclareRobustCommand{\Roman@bar}[1]{% #1 is in Roman, i.e. MMXXVIII
126 %% (or any other text, "Caesar" would work, too);
127 %% similar to code of by Prof. Enrico Gregorio (egreg) at
128 %% https://tex.stackexchange.com/a/24084
129 \@sphack%
130 \edef\romanbartmp{#1}%
131 %% height:
132 \sbox0{\textsf{\romanbartmp}}%
133 %% top line:
134 %% + top of top line:
135 \setlength{\romanbardimH}{\dimexpr\ht0+0.05ex\relax}%
136 %% + bottom of top line:
137 \setlength{\romanbardimD}{\dimexpr-\ht0+0.05ex\relax}%
138 %% width:
139 \sbox0{\textsf{\expandafter\r@iseL\romanbartmp @}}%
140 \setlength{\romanbardimW}{\dimexpr\wd0+1pt\relax}%
141 \@esphack%
142 \makebox[\romanbardimW]{%
143 \rlap{\vrule width\romanbardimW height\romanbardimH depth\romanbardimD}% top line
144 \rlap{\vrule width\romanbardimW height 0.06ex depth 0.03ex}% bottom line
145 \kern0.5pt\textsf{\expandafter\r@iseL\romanbartmp @}\kern0.5pt}%
146 }
147

```

`\romannum` While it is not needed for the bars, it is sometimes asked for a command to convert an Arabic number into a Roman one. `\roman{...}` can only be applied to a counter, i.e. `\roman{25}` does not work, but

```

\newcounter{examplecounter}

```

```
\setcounter{examplecounter}{25}
\roman{examplecounter}
```

would be necessary. Further non-negative values would not work. `\romannum` accepts any number as argument. (If the argument is no number, an error message is given and the argument printed (executed) without applying anything to it.)

```
148 \DeclareRobustCommand{\romannum}[1]{%
149 \ifnumeric{#1}{% is numeric
150 \setcounter{romanbarcount}{#1}%
151 %% similar to \xroman from the https://ctan.org/pkg/pageslts package
152 \ifnum\c@romanbarcount<1\relax%
153   \ifnum #1>0\relax%
154     \roman{#1}%
155   \else%
156     \ifnum #1<0\relax%
157       -\romannumeral\number-#1@%
158     \else%
159       0%
160     \fi%
161   \fi%
162 \else\@roman\c@romanbarcount%
163 \fi%
164 }{% is not numeric
165 \PackageError{romanbar}{%
166 Argument of \string\romannum\space is not a number}{%
167 The command \string\romannum\space converts an Arabic number into a %
168 lower-case Roman one,\MessageBreak%
169 but the used argument of \string\romannum\space is not an Arabic number %
170 but\MessageBreak%
171 '#1',\MessageBreak%
172 which will now be printed unchanged.}%
173 #1%
174 }%
175 }
176
```

`\Romannum` The same for upper-case Roman numbers, `\Romannum` instead of `\Roman`:

```
177 \DeclareRobustCommand{\Romannum}[1]{%
178 \ifnumeric{#1}{% is numeric
179 \setcounter{romanbarcount}{#1}%
180 %% similar to \XRoman from the http://ctan.org/pkg/pageslts package
181 \ifnum\c@romanbarcount<1\relax%
182   \ifnum #1>0\relax%
183     \Roman{#1}%
184   \else%
185     \ifnum #1<0\relax%
186       -\expandafter\@slowromancap\romannumeral\number-#1@%
187     \else%
188       0%
189     \fi%
190   \fi%
191 \else\@Roman\c@romanbarcount%
192 \fi%
193 }{% is not numeric
194 \PackageError{romanbar}{%
195 Argument of \string\Romannum\space is not a number}{%
196 The command \string\Romannum\space converts an Arabic number into an %
197 upper-case Roman one,\MessageBreak%
198 but the used argument of \string\Romannum\space is not an Arabic number %
199 but\MessageBreak%
200 '#1'.}%
201 #1%
```

```
202 }%
203 }
204
205 </package>
```

## 6 Installation

### 6.1 Downloads

Everything is available at <https://www.CTAN.org/>, but may need additional packages themselves.

`romanbar.dtx` For unpacking the `romanbar.dtx` file and constructing the documentation it is required:

- L<sup>A</sup>T<sub>E</sub>X 2<sub>ε</sub>[2024-11-01] or newer, <https://www.ctan.org/starter>
- document class `ltxdoc`, 2024/02/08, v2.1j, <https://www.ctan.org/pkg/ltxdoc>
- package `holtxdoc`, 2019/12/09, v0.30, <https://www.ctan.org/pkg/holtxdoc>
- package `hypdoc`, 2023-10-26, v1.19, <https://www.ctan.org/pkg/hypdoc>

`romanbar.sty` The `romanbar.sty` for L<sup>A</sup>T<sub>E</sub>X 2<sub>ε</sub> (i. e. each document using the `romanbar` package) requires:

- T<sub>E</sub>XFormat L<sup>A</sup>T<sub>E</sub>X 2<sub>ε</sub>[2024-11-01] or newer, <https://www.ctan.org/starter>
- package `trimclip`, 2020/08/19, v1.2, from the `adjustbox` bundle, <https://www.ctan.org/pkg/adjustbox>

`romanbar-example.tex` The `romanbar-example.tex` requires the same files as all documents using the `romanbar` package and additionally:

- class `article`, 2024/06/29, v1.4n , from classes: <https://www.ctan.org/pkg/classes>
- package `romanbar`, 2025-01-28, v1.0g, <https://www.ctan.org/pkg/romanbar>  
(Well, it is the example file for this package, and because you are reading the documentation for the `romanbar` package, it can be assumed that you already have some version of it – is it the current one?)

`Oberdiek` All packages of HEIKO OBERDIEK’S bundle ‘`oberdiek`’ (especially `holtxdoc`) are also available in a TDS compliant ZIP archive:

<https://mirrors.ctan.org/macros/latex/contrib/oberdiek.zip>.

It is probably best to download and use this, because the packages in there are quite probably both recent and compatible among themselves.

`hyperref` `hyperref` is not included in that bundle and needs to be downloaded separately, <https://mirrors.ctan.org/macros/latex/contrib/hyperref.zip>.

`Münch` A hyperlinked list of my (other) packages can be found at <https://www.ctan.org/author/muench-hm>.

### 6.2 Package, unpacking TDS

**Package.** This package is available on CTAN:

<http://mirrors.ctan.org/macros/latex/contrib/romanbar/romanbar.dtx>  
The source file.

<http://mirrors.ctan.org/macros/latex/contrib/romanbar/romanbar.pdf>  
The documentation.

<http://mirrors.ctan.org/macros/latex/contrib/romanbar/romanbar-example.pdf>

The compiled example file, as it should look like.

<http://mirrors.ctan.org/macros/latex/contrib/romanbar/README>

The README file.

There is also a `romanbar.tds.zip` available:

<https://mirrors.ctan.org/install/macros/latex/contrib/romanbar.tds.zip>

Everything in TDS compliant, compiled format.

which additionally contains

|                                   |   |
|-----------------------------------|---|
| <code>romanbar.ins</code>         | The installation file.                    |
| <code>romanbar.drv</code>         | The driver to generate the documentation. |
| <code>romanbar.sty</code>         | The <code>.style</code> file.             |
| <code>romanbar-example.tex</code> | The example file.                         |

For required other packages, please see the preceding subsection.

**Unpacking.** The `.dtx` file is a self-extracting `docstrip` archive. The files are extracted by running the `.dtx` through plain  $\TeX$ :

```
tex romanbar.dtx
```

About generating the documentation see paragraph 6.4 below.

**TDS.** Now the different files must be moved into the different directories in your installation TDS tree (also known as `texmf` tree):

|                                   |  |
|-----------------------------------|--|
| <code>romanbar.sty</code>         | → <code>tex/latex/romanbar/romanbar.sty</code>         |
| <code>romanbar.pdf</code>         | → <code>doc/latex/romanbar/romanbar.pdf</code>         |
| <code>romanbar-example.tex</code> | → <code>doc/latex/romanbar/romanbar-example.tex</code> |
| <code>romanbar-example.pdf</code> | → <code>doc/latex/romanbar/romanbar-example.pdf</code> |
| <code>romanbar.dtx</code>         | → <code>source/latex/romanbar/romanbar.dtx</code>      |

If you have a `docstrip.cfg` that configures and enables `docstrip`'s TDS installing feature, then some files can already be in the right place, see the documentation of `docstrip`.

### 6.3 Refresh file name databases

If your  $\TeX$  distribution ( $\TeX$  Live, MiK $\TeX$ , ...) relies on file name databases, you must refresh these. For example,  $\TeX$  Live users run `texhash` or `mktexlsr`.

### 6.4 Some details for the interested

**Unpacking with  $\LaTeX$ .** The `.dtx` chooses its action depending on the format:

**plain  $\TeX$ :** Run `docstrip` and extract the files.

**$\LaTeX$ :** Generate the documentation.

If you insist on using  $\LaTeX$  for `docstrip` (really, `docstrip` does not need  $\LaTeX$ ), then inform the autodetect routine about your intention:

```
latex \let\install=y\input{romanbar.dtx}
```

Do not forget to quote the argument according to the demands of your shell.

**Generating the documentation.** You can use both the `.dtx` or the `.drv` to generate the documentation. The process can be configured by a configuration file `ltxdoc.cfg`. For instance, put the following line into this file, if you want to have A4 as paper format:

```
\PassOptionsToClass{a4paper}{article}
```

An example follows how to generate the documentation with pdfL<sup>A</sup>T<sub>E</sub>X:

```
pdflatex romanbar.dtx
makeindex -s gind.ist romanbar.idx
pdflatex romanbar.dtx
makeindex -s gind.ist romanbar.idx
pdflatex romanbar.dtx
```

## 6.5 Compiling the example

The example file, `romanbar-example.tex`, can be compiled via `(pdf)latex romanbar-example.tex`.

## 7 Acknowledgements

I would like to thank Prof. ENRICO GREGORIO (egreg) for his answer at <https://tex.stackexchange.com/a/24084> and HEIKO OBERDIEK for providing a lot of useful packages (from which I also got everything I know about creating a file in `.dtx` format, OK, say it: copying).

## 8 History

[2011/07/25 v1.0a]

- First code by Prof. ENRICO GREGORIO (egreg) at <https://tex.stackexchange.com/a/24084>

[2011/07/26 v1.0b]

- Packed into a `.sty` file.
- Removed the requirement of  $\epsilon$ -T<sub>E</sub>X for the package.

[2011/08/25 v1.0c]

- Renamed `romanbar` package.
- Minor details.

[2011/09/16 v1.0d]

- Made commands robust.
- Minor details.

[2011/12/16 v1.0e]

- Additionally accepts now Arabic numbers and converts them to Roman ones with bars.
- Also non-positive numbers are now accepted.

## [2012/01/01 v1.0f]

- Added `\romannum` and `\Romannum` to convert Arabic to Roman numbers (without bars).
- `\r@iseL`.
- Created a `dtx`, `example`, and `README`.
- Uploaded to CTAN.

## [2025-01-28 v1.0g]

- Converted to UTF-8.
- Updated to L<sup>A</sup>T<sub>E</sub>X format 2024-11-01.
- Documentation updates.
- Using the `trimclip` package for improved handling of “L”.
- Again using  $\varepsilon$ -T<sub>E</sub>X for the package. Version 1.0b removed the requirement of  $\varepsilon$ -T<sub>E</sub>X for this package. Now it is 2025 and  $\varepsilon$ -T<sub>E</sub>X can be assumed standard. Therefore  $\varepsilon$ -T<sub>E</sub>X is used for this package. Also own counters and own `dimens` instead of `scratch` ones are used now.

When you find a mistake or have a suggestion for an improvement of this package, please send an e-mail to the maintainer, thanks! (Please see BUG REPORTS in the README.)

## 9 Index

Numbers written in *italic* refer to the page where the corresponding entry is described; numbers underlined refer to the code line of the definition; plain numbers refer to the code lines where the entry is used.
