Abstract

This package provides for Lua $\text{L}\text{\TeX}$ an Arab \TeX -like interface to generate Arabic writing from an ASCII transliteration. It is particularly well-suited for complex documents such as technical documents or critical editions where a lot of left-to-right commands intertwine with Arabic writing. `arabluatex` is able to process any Arab \TeX input notation. Its output can be set in the same modes of vocalization as Arab \TeX , or in different roman transliterations. It further allows many typographical refinements. It will eventually interact with some other packages yet to come to produce from `.tex` source files, in addition to printed books, TEI `xml` compliant critical editions and/or lexicons that can be searched, analyzed and correlated in various ways.

This release of `arabluatex` consists of the following source files:

- `arabluatex.ins`
- `arabluatex.dtx`
- `arabluatex.lua`
- `arabluatex_voc.lua`
- `arabluatex_fullvoc.lua`
- `arabluatex_novoc.lua`
- `arabluatex_trans.lua`

1 Introduction

In comparison to Prof. Lagally’s outstanding Arab \TeX ,¹ ArabLua \TeX is at present nothing more than a modest piece of software. Hopefully—if I may say so—it will eventually provide all of its valuable qualities to the Lua \TeX users.

`arabtex` dates back to 1992. As far as I know, it was then the first and only way to typeset Arabic texts with \TeX and $\text{L}\text{\TeX}$. To achieve that, `arabtex` provided—and still does—an Arabic font in *Nashī* style and a macro package that defined its own input notation which was, as the author stated, “both machine, and human, readable, and suited for electronic transmission and e-mail communication”.² Even if the same can be said about Unicode, Arab \TeX ASCII input notation still surpasses Unicode input, in my opinion, when it comes to typesetting complex documents, such as scientific documents or critical editions where footnotes and other kind of annotations can be particularly abundant. It must also be said that most text editors have trouble in displaying Arabic script connected with preceding or following \TeX commands: it often happens that commands seem misplaced, not to mention punctuation marks, or opening or closing braces, brackets or parentheses that are unexpectedly displayed in the wrong direction. Of course, some text editors provide ways to get around such difficulties by inserting invisible Unicode characters, such as LEFT-TO-RIGHT or RIGHT-TO-LEFT MARKS (U+200E, U+200F), RTL/LTR “embed” characters (U+202B, U+202A) and RLO/LRO “bidi-override” characters (U+202E, U+202D).³ Nonetheless, it remains that inserting all the time these invisible characters in complex documents rapidly becomes confusing and cumbersome.

The great advantage of Arab \TeX notation is that it is immune from all these difficulties, let alone its being clear and straightforward. One also must remember that computers are designed to process code. Arab \TeX notation is a way of encoding Arabic language, just as \TeX “mathematics mode” is a way of processing code to display mathematics. As such, not only does it allow greater control over typographical features, but it also can be processed in several different ways: so without going into details, depending on one’s wishes, Arab \TeX input can be full vocalized Arabic (*scriptio plena*), vocalized Arabic or non-vocalized Arabic (*scriptio defectiva*); it further can be transliterated into whichever romanization standard the user may choose.

But there may be more to be said on that point, as encoding Arabic also naturally encourages the coder to vocalize the texts—without compelling him to do so, of course. Accurate coding may even have other virtuous effects. For instance, hyphens may be used for tying particles or prefixes to words, or to mark inflectional endings, and so forth. In other words, accurate coding produces accurate texts that can stand to close grammatical scrutiny and to complex textual searches as well.

¹See <http://ctan.org/pkg/arabtex>

²Lagally (2004, p. 2).

³Gáspár Sinai’s Yudit probably has the best Unicode support. See <http://www.yudit.org>.

Having that in mind, I started `arabluatex`. With the help of Lua, it will eventually interact with some other packages yet to come to produce from `.tex` source files, in addition to printed books, TEI `xml` compliant critical editions and/or lexicons that can be searched, analyzed and correlated in various ways.

1.1 `arabluatex` is for `LuaLTEX`

It goes without saying that `arabluatex` requires `LuaLTEX`. `TeX` and `LTEX` have `arabtex`, and `X\mathbb{C}LTEX` has `arabxetex`. Both of them are much more advanced than `arabluatex`, as they can process a number of different languages,⁴ whereas `arabluatex` can process only Arabic for the time being. More languages will be included in future releases of `arabluatex`.

In comparison to `arabxetex`, `arabluatex` works in a very different way. The former relies on the `TECKit` engine which converts `ArabTEX` input on the fly into Unicode Arabic script, whereas the latter passes `ArabTEX` input on to a set of Lua functions. At first, `LTEX` commands are taken care of in different ways: some, as `\emph`, `\textbf` and the like are expected to have Arabic text as arguments, while others, as `\LR`, for “left-to-right text”, are not. Then, once what is Arabic is carefully separated from what is not, it is processed by other Lua functions which rely on different sets of correspondence tables to do the actual conversion in accordance with one’s wishes. Finally, Lua returns to `TeX` the converted strings—which may in turn contain some other `ArabTEX` input yet to be processed—for further processing.

2 The basics of `arabluatex`

2.1 Activating `arabluatex`

As usual put in your preamble:

```
\usepackage{arabluatex}
```

The only requirement of `arabluatex` is `LuaLTEX`; it will complain if you try to compile your document with another engine. That aside, `arabluatex` does not load packages such as `polyglossia` or `luabidi`. It can work with `polyglossia` though, but does not require it.

Font setup If you wish to use your own Arabic font, you can define it before loading `arabluatex`. Assuming that `fontspec` is loaded, put this in your preamble just above the line that loads `arabluatex`:

```
\newfontfamily\arabicfont{<fontname>}[Script=Arabic]
```

where `<fontname>` is the standard name of the Arabic font you wish to use.

⁴To date, both packages support Arabic, Maghribi, Urdu, Pashto, Sindhi, Kashmiri, Uighuric and Old Malay; in addition to these, `arabtex` also has a Hebrew mode, including Judeo-Arabic and Yiddish.

By default, if no Arabic font is selected, `arabluatex` will issue a warning message and attempt to load the Amiri font⁵ like so:—

```
\newfontfamily\arabicfont{Amiri}[Script=Arabic]
```

REM. By default Amiri places the *kasrah* in combination with the *taṣdīd* below the consonant, like so: .. That is correct, as at least in the oldest manuscripts .. may stand for .. as well as .. See Wright (1896, i.14.C–D). The placement of the *kasrah* above the consonant may be obtained by selecting the ss05 feature of the Amiri font, like so:—⁶

```
\newfontfamily\arabicfont{Amiri}[Script=Arabic,RawFeature={+ss05}]
```

Other Arabic fonts may behave differently.

2.2 Options

`arabluatex` may be loaded with four mutually exclusive global options, each of which may be overridden at any point of the document (see below section [2.3.1](#) on page [8](#)):

voc

fullvoc

In addition to what the *voc* mode does, *fullvoc* expresses the *sukūn* and the *waṣlah*.

novoc

None of the diacritics is showed in novoc mode, unless otherwise specified (see “quoting” technique below section 4.4 on page 19).

trans

This mode transliterates the ArabTeX input into one of the accepted standards. At present, two standards are supported (see below section [7](#) on page [30](#) for more details):

dmg *Deutsche Morgenländische Gesellschaft*, which is selected by default;
loc *Library of Congress*.

More standards will be included in future releases of arabluatex.

2.2.1 Classic contrasted with modern typesetting of Arabic

By default, arabluatex typesets Arabic in a classic, traditional style the most prominent features of which are the following:

- ‘Classic’ *maddah*: when *’alif* and *hamzah* accompanied by a simple vowel or *tanwîn* is preceded by an *’alif* of prolongation (ُ), then a mere *hamzah* is written on the line, and a *maddah* is placed over the *’alif*, like so:—

⁵Hosny (2015).

⁶See the documentation of amiri, Hosny (2015, p. 5).

سَمَاءٌ samā^{un}, جَاءَ ġā'a, يَتَسَاءَلُونَ yatasā'alūna⁷
 (see on page 14 for further details).

- The euphonic *tašdīd* is generated (see on page 15).
- In *fullvoc* mode, the *sukūn* is expressed.

New feature v1.4.4 \SetArbEasy
 Such refinements as ‘classic’ *maddah* may be discarded by the \SetArbEasy command, either globally in the preamble or locally at any point of the document. The difference between \SetArbEasy and its ‘starred’ version \SetArbEasy* is that the former keeps the *sukūn* that is generated by the *fullvoc* mode, while the latter further takes it away. Default ‘classic’ rules may be set back at any point of the document with the \SetArbDfslt command. Assimilation rules laid on item b on page 15 may also be applied by the ‘starred’ version of this command \SetArbDfslt* either in the preamble or at any point of the document.⁸ Examples follow:—

- (a) \SetArbDfslt:
 - i. voc وَمَاتَ اسْتِسْقَاءَ قَبْلَ أَنْ يُتَمَّكَّهُ فِي نُجُومِ السَّمَاءِ
 - ii. fullvoc وَمَاتَ اسْتِسْقَاءَ قَبْلَ أَنْ يُتَمَّكَّهُ فِي نُجُومِ السَّمَاءِ
 - iii. trans wa-māta 'stisqā^{an} qabla 'an yutimma kitāba-hu fī nuğūmⁱ 's-samāⁱ
- (b) \SetArbDfslt*:
 - i. voc وَمَاتَ اسْتِسْقَاءَ قَبْلَ أَنْ يُتَمَّكَّهُ فِي نُجُومِ السَّمَاءِ
 - ii. fullvoc وَمَاتَ اسْتِسْقَاءَ قَبْلَ أَنْ يُتَمَّكَّهُ فِي نُجُومِ السَّمَاءِ
 - iii. trans wa-māta 'stisqā^{an} qabla 'ay yutimma kitāba-hu fī nuğūmⁱ 's-samāⁱ
- (c) \SetArbEasy:
 - i. voc وَمَاتَ اسْتِسْقَاءَ قَبْلَ أَنْ يُتَمَّكَّهُ فِي نُجُومِ السَّمَاءِ
 - ii. fullvoc وَمَاتَ اسْتِسْقَاءَ قَبْلَ أَنْ يُتَمَّكَّهُ فِي نُجُومِ السَّمَاءِ
 - iii. trans wa-māta 'stisqā^{an} qabla 'an yutimma kitāba-hu fī nuğūmⁱ 's-samāⁱ
- (d) \SetArbEasy*:
 - i. voc وَمَاتَ اسْتِسْقَاءَ قَبْلَ أَنْ يُتَمَّكَّهُ فِي نُجُومِ السَّمَاءِ
 - ii. fullvoc وَمَاتَ اسْتِسْقَاءَ قَبْلَ أَنْ يُتَمَّكَّهُ فِي نُجُومِ السَّمَاءِ
 - iii. trans wa-māta 'stisqā^{an} qabla 'an yutimma kitāba-hu fī nuğūmⁱ 's-samāⁱ

Please note that this document is typeset with \SetArbDfslt throughout.

2.3 Typing Arabic

\arb Once arabluatex is loaded, a \arb{⟨Arabic text⟩} command is available for inserting Arabic text in paragraphs, like so:—

⁷Note that in old mss. such forms as سَمَاءٌ samā^{un}, جَاءَ ġā'a are also found; see Wright (1896, i. 24 D).

⁸For an example, see section 5.1 on page 28.

```

1 From \textcite[i. 1 A]{Wright}:\--- Arabic, like Hebrew and
2 Syriac, is written and read from right to left. The letters
3 of the alphabet (\arb{.hurUf-u 'l-hijA'-i}, \arb{.hurUf-u
4 'l-tahajjiI}, \arb{al-.hurUf-u 'l-hijA'iyyaT-u}, or
5 \arb{.hurUf-u 'l-mu`jam-i}) are twenty-eight in number and
6 are all consonants, though three of them are also used as
7 vowels (see §-3).

```

From Wright (1896, i. 1 A):— Arabic, like Hebrew and Syriac, is written and read from right to left. The letters of the alphabet (حُرُوفُ الْجَاءِ) are twenty-eight in number and are all consonants, though three of them are also used as vowels (see § 3).

Caveat For some reason, left-to-right paragraphs that start with Arabic words lose their indentation. For the time being, this can be circumvented by appending the `\indent` command at the commencement of such paragraphs.

The same remark applies to left-to-right list environments: when items start with Arabic words, the `\arb` command must be prefixed with `\indent`. The following example comes from Wright (1896, i. 213 C):—

```

1 \begin{enumerate}[XVI.]
2 \item \indent\arb{fawA`ilu}*.
3 \begin{enumerate}[1.]
4 \item \indent\arb{fA`aluN}; as \arb{_hAtamuN} \emph{a
5 signet-ring}, ...
6 \end{enumerate}
7 \end{enumerate}

```

XVI. فَاعلُ.

1. حَاتَمٌ *a signet-ring*, ...

arab Running paragraphs of Arabic text should rather be placed inside an *Arabic environment*

```

1 \begin{arab}
2 [...]
3 \end{arab}

```

like so:—

```

1 \begin{arab}
2   'at_A . sadIquN 'il_A ju.hA ya.tlubu min-hu .himAra-hu
3   li-yarkaba-hu fI safraTiN qa.sIraTiN fa-qAla la-hu:
4   \enquote{sawfa 'u`Idu-hu 'ilay-ka fI 'l-masA'-i
5   wa-'adfa`u la-ka 'ujraTaN.} fa-qAla ju.hA:
6   \enquote{'anA 'AsifuN jiddaN 'anni lA 'asta.tI`u 'an
7   'u.haqqa la-ka ra.gbata-ka fa-'l-.himAr-u laysa hunA
8   'l-yawm-a.} wa-qabla 'an yutimma ju.hA kalAma-hu bada'a
9   'l-.himAr-u yanhagu fI 'i.s.tabli-hi. fa-qAla la-hu
10  .sadIqu-hu: \enquote{'innI 'asma`u .himAra-ka yA ju.hA
11  yanhagu.} fa-qAla la-hu ju.hA: \enquote{.garIbuN
12  'amru-ka yA .sadIqI 'a-tu.saddiqu 'l-.himAr-a
13  wa-tuka_d_diba-nI?}
14 \end{arab}

```

أَتَى صَدِيقٌ إِلَى جُحَا يَطْلُبُ مِنْهُ حِمَارًا لِيَرْكَبَهُ فِي سَفَرٍ قَصِيرٍ قَالَ لَهُ: «سَوْفَ أُعِيدُ إِلَيْكَ فِي الْمَسَاءِ وَأَدْفَعُ لَكَ أُجْرَهُ». قَالَ جُحَا: «أَنَا آسَفُ جِدًا أَنِّي لَا أُسْتَطِعُ أَنْ أُحَقِّنَ لَكَ رَغْبَتَكَ فَالْحِمَارُ لَيْسَ هُنَّا الْيَوْمَ». وَقَبْلَ أَنْ يُتَمَّمْ جُحَا كَلَامُهُ بِدَا الْحِمَارُ يَنْهَى فِي إِصْطَبَلِهِ. قَالَ لَهُ صَدِيقُهُ: «إِنِّي أَسْمَعُ حِمَارَكَ يَا جُحَا يَنْهَى». قَالَ لَهُ جُحَا: «غَرِيبٌ أَمْ رُكَّا يَا صَدِيقِي أَتَصِدِّقُ الْحِمَارَ وَتُكَذِّبَنِي؟»

2.3.1 Local options

As seen above in section 2.2 on page 5, arabluatex may be loaded with four mutually exclusive global options: `voc` (which is the default option), `fullvoc`, `novoc` and `trans`. Whatever choice has been made globally, it may be overriden at any point of the document, as the `\arb` command may take any of the `voc`, `fullvoc`, `novoc` or `trans` modes as optional arguments, like so:—

- `voc` – `\arb[voc]{<Arabic text>};`
- `fullvoc` – `\arb[fullvoc]{<Arabic text>};`
- `novoc` – `\arb[novoc]{<Arabic text>};`
- `trans` – `\arb[trans]{<Arabic text>}.`

The same optional arguments may be passed to the environment `arab`: one may have `\begin{arab}[<mode>]... \end{arab}`, where `<mode>` may be any of `voc`, `fullvoc`, `novoc` or `trans`.

3 Standard ArabTEX input

3.1 Consonants

Table 1 gives the ArabTEX equivalents for all of the Arabic consonants.

Letter	Transliteration ⁹		ArabT _E X notation
	dmg	loc	
أ ¹⁰	a	a	أ
ب	b	b	ب
ت	t	t	ت
ث	<u>t</u>	th	_t
ج	ḡ	j	^g or j
ح	h̄	h̄	.h
خ	h̄	kh̄	_h or x
د	d̄	d̄	d
ذ	<u>d̄</u>	dh̄	_d
ر	r̄	r̄	r
ز	z̄	z̄	z
س	s̄	s̄	s
ش	š̄	sh̄	^s
ص	š̄	š̄	.s
ض	d̄	d̄	.d
ط	t̄	t̄	.t
ظ	z̄	z̄	.z
ع			'
غ	ḡ	gh̄	.g
ف	f̄	f̄	f

ن	n̄	n̄	n
ه	h̄	h̄	h
و	w̄	w̄	w
ي	ȳ	ȳ	y
ه	ah̄	ah̄	T

Table 1: Standard ArabT_EX (consonants)

3.2 Vowels

3.2.1 Long vowels

Table 2 gives the ArabT_EX equivalents for the Arabic long vowels.

⁹See below section 7 on page 30.

¹⁰For 'alif as a consonant, see Wright (1896, i. 16 D). The *hamzah* itself is encoded <">'>. See below section 4.2 on page 13.

Letter	Transliteration ¹¹		ArabTeX notation
	dmg	loc	
ا	ā	ā	A
ء	ū	ū	U
ي	ī	ī	I
ى ¹²	ā	á	_A or Y
ـ	ā	ā	_a
ـ	ū	ū	_u
ـ	ī	ī	_i

Table 2: Standard ArabTeX (long vowels)

REM. a. The long vowels \bar{a} , \bar{u} , \bar{i} , otherwise called *hurūf 'l-maddi*, *the letters of prolongation*, involve the placing of the short vowels a , u , i before the letters ا, ء, ي respectively. arabluatex does that automatically in case any from `voc`, `fullvoc` or `trans` modes is selected e.g. قَالَ *qāla*, قَدِيلٌ *qādīl*, يَقُولُ *yaqūlu*.

REM. b. Defective writings, such as ا, *al-'alif 'l-mahdūfat*, or defective writings of \bar{u} and \bar{i} are encoded `_a_u` and `_i` respectively, e.g. `_d_alika` تَلَكَ, `al-mal_a'ikaT-u` 'l-ra.hm_an-u حَدِيفَةُ بْنُ أَمَانٍ `i` for *Hudayfat* *bn u* 'l-Yamānī, etc.

3.2.2 Short vowels

Table 3 gives the ArabTeX equivalents for the Arabic short vowels.

Letter	Transliteration ¹³		ArabTeX notation
	dmg	loc	
ـ	a	a	a
ـ	u	u	u
ـ	i	i	i
ـ	an	an	aN
ـ	un	un	uN
ـ	in	in	iN

Table 3: Standard ArabTeX (short vowels)

¹¹ See below section 7 on page 30.

¹² = *al-'alif 'l-maqṣūrat*.

¹³ See below section 7 on page 30.

Whether Arabic texts be vocalized or not is essentially a matter of personal choice. So one may use `voc` mode and decide not to write vowels except at some particular places for disambiguation purposes, or use `novoc` mode, not write vowels—as `novoc` normally does not show them—except, again, where disambiguation is needed.¹⁴

However, it may be wise to always write the vowels, leaving to the various modes provided by `arabluatex` to take care of showing or not showing the vowels.

That said, there is no need to write the short vowels *fathah*, *dammah* or *kasrah* except in the following cases:

- at the commencement of a word, to indicate that a connective *'alif* is needed, with the exception of the article (see below section 4.4 on page 19);
- when `arabluatex` needs to perform a contextual analysis to determine the carrier of the *hamzah*;
- in the various transliteration modes, as vowels are always expressed in romanized Arabic.

4 arabluatex in action

4.1 The vowels and diphthongs

Short vowels As said above, they are written $\langle a, u, i \rangle$:

_halaqa (or xalaqa) خلق *halqa*, ^samsuN شمس *sams^{un}*, karImuN كريم *Karīm^{un}*.

bi-hi بـيـهـيـ *bi-hi*, 'aqi.tuN أـقـطـيـ *aqit^{un}*.

la-hu لـهـوـ *la-hu*, .hujjaTuN حـجـةـ *hujgat^{un}*.

Long vowels They are written $\langle U, A, I \rangle$:

qAla قال *qāla*, bI'a بـيـعـ *bī'a*, .tUruN طـورـ *tūr^{un}*, .tInuN طـينـ *tīn^{un}*, murU'aTuN مـرـءـةـ *murū'at^{un}*.

'alif maqsūrah It is written $\langle _A \rangle$ or $\langle Y \rangle$:

al-fat_A الـفـتـيـ *al-fatā*, al-maqh_A الـمـقـهـيـ *al-maqhā*, 'il_A إـلـيـ *ilā*.

'alif otiosum Said *'alif^u l-wiqāyatⁱ*, “the guarding *'alif*”, after , at the end of a word, both when preceded by *dammah* and by *fathah* is written $\langle UA \rangle$ or $\langle aW, aWA \rangle$:

na.sarUA نـصـرـواـ *nasarū*, katabUA كـتـبـواـ *katabū*, ya.gzUA يـغـزـواـ *yagzū*, ramaW رـمـواـ *ramaw*, banaWA بـنـوـاـ *banaw*.

¹⁴See below section 4.4 on page 19.

'alif mahdūfah and defective ū, ī They are written $\langle_a, _i _u\rangle$:

al-l_ah-u **اللهُ** *al-lāh^u*, 'il_ahuN **إِلَهٌ** *'ilāh^{un}*.
 al-ra.hm_an-u **أَرْحَمُ** *ar-rahmān^u*, l_akin **لَكِنْ** *lākin*, h_ahunA **هُنَا** *hāhunā*,
 .hunayn-u bn-u **حُنَيْنُ بْنُ إِسْحَاقَ** *Hunayn^u bn^u Ishāq^a*, rabb_i
رَبُّ *rabbī*, al-'A.s_i **الْعَاصِ** *al-'Āṣī*.

Silent ي و ك Some words ending with كَة are usually written كَوْة or كَوْه instead of كَة; see Wright (1896, i. 12 A). arabluatek preserves that particular writing; the same applies to words ending in يَة for كَة. Long vowels (*U, I*) shall receive no *sukūn* after a 'alif *māhdūfah* and are discarded in *trans* mode:

.hay_aUTuN حَيَاةً *hayāt*^{un}, .sal_aUTuN صَلَاةً *salāt*^{un}, mi^sk_aUTuN مشْكُوٰةً *miškāt*^{un}, tawr_aITuN طَرْفَةً *tawrrāt*^{un}.

And so also: al-rib_aIT-u الْرِبَّةُ ar-ribāt^u.

'Amr^{un}, and the silent , To that name a silent , is added to distinguish it from '*Umar^u*: see Wright (1896, i. 12 C). In no way this affects the sound of the *tanwīn*, so it has to be discarded in *trans* mode:

ـ `amruNU *amr^{un}*, ـ amraNU *amr^{an}*, ـ amriNU *amrⁱⁿ*. عَمِرُوا عَمِرُو عَمِرُونَ

When the *tanwīn* falls away (Wright 1896, i. 249 B): `amr-uU bn-u mu.hammadiN ^{محمد بن محمد} `Amr^u bn^u Muhammadⁱⁿ, mu.hammad-u bn-u `amr-iU bn-i _halidiN ^{محمد بن خالد بن} Muhammad^u bn^u `Amriⁱ bnⁱ Hālidⁱⁿ.

And so also: al-rib_aUA أَرْبِيَا *ar-ribā*, ribaNU رِبُّا *rib^{an}*.

tanwīn The marks of doubled short vowels, $\underline{\underline{a}}$, $\underline{\underline{u}}$, $\underline{\underline{i}}$, are written $\langle uN, aN, iN \rangle$ respectively. arabluatex deals with special cases, such as $\underline{\underline{a}}$ taking an ل after all consonants except $\ddot{\text{o}}$, and *tanwīn* preceding $\underline{\underline{\text{s}}}$ as in هـدـيـ , which is written $\langle aN_A \rangle$ or $\langle aNY \rangle$:

mAluN مَالُ *mālun*, bAbaN بَابًا *bābān*, madInaN مدِيْنَةٌ *madīnatān*, bintiN بنت *bintin*
maqhaN_A مقهيٌ *magħaqba*ⁿ, fataNY فتىٌ *fataqba*ⁿ.

arabluatex is aware of special orthographies: `\say{un}` شَيْءٌ `\say{an}` شَيْئًا `\say{in}` شَيْئٍ.

In some cases, it may be useful to mark the root form of defective words so as to produce a more accurate transliteration of ending *tanwīn*. As seen above, *tanwīn* preceding ى is written ⟨*aN_AaNYiNI*

al-qA.dI al-qādī, qA.diyaN قاضٍ *qādīy^{an}*, qA.diNI قاضٍ *qādīⁿ*.

4.2 Other orthographic signs

tā' marbūtah It is written ⟨*T*⟩:

madInaTuN مدینة *madīnat^{un}*, madInaTaN مدینة *madīnat^{an}*, madInaTiN مدینة *madīnatⁿ*.

hamzah It is written ⟨'⟩, its carrier being determined by contextual analysis. In case one wishes to bypass this mechanism, he can use the “quoting” feature that is described below in section 4.4 on page 19.

Initial hamzah: 'asaduN أَسَد 'asad^{un}, 'u_htuN أَخْتُ 'uht^{un}, 'iqlliDuN إِقْلِيد 'iqlīd^{un}, 'anna أَنْ 'anna, 'inna أَنْ 'inna.

hamzah followed by the long vowel و is encoded '_U: '_U1_A: 'أَوْلَى 'ula, '_U1U: 'أَوْلُو 'ulū, '_U1A'ika: 'أَوْلَائِكَ 'ulā'ika.

hamzah followed by the long vowel ي is encoded '_I: '_ImAnuN إِيمَانْ 'imā-n^{un}¹⁵.

Middle hamzah: xA.ti'-Ina حَاطِئَنَ hāti^{inā}, ru'UsuN رُؤُوسُ ru'is^{un}, xa.tI'aTuN خَطِيئَةً hāti^{atun}, su'ilā سُلَيْلَ su'ilā, 'as'ilaTuN أَسْلَيْلَ 'as'ilat^{un}, mas'alaTuN مَسَالَةً mas'alat^{un}, 'as'alu أَسَالُ 'as'alu, yatasA'alUna يَتَسَاءَلُونَ 'as'alu, yatasā'aluna مُرْوَعَةً murū'at^{un}, ta'xIrN تَحْيِيرٌ ta'hīr^{un}, ta'ax xara تَخَّرَ ta'abbara, ji'tu-ka جَتَّكَ ji'tu-ka, qA'iluN قَائِلٌ qā'il^{un}, .hIna'i_diN hīna idⁱⁿ حِينَدٌ.

From Wright (1896, i. 14 B):— All consonants, whatsoever, not even 'alif *hēmzatum* excepted, admit of being doubled and take *taṣdīd*. Hence we speak and write ra' 'AsuN رَأْسُ ra''ās^{un}, sa''AluN سَأَلْ sa''āl^{un}, na''AjuN نَأْجَ na''āg^{un}.

¹⁵For another way of encoding the initial *hamzah* followed by a long vowel, see the *tahfīf* 'l-*hamzat*ⁱ on the next page.

Final hamzah: xa.ta'uN $\overset{\circ}{\text{خَطَّ}}$ $\overset{\circ}{\text{haṭa}}^{\text{un}}$, xa.ta'an $\overset{\circ}{\text{خَطَّ}}$ $\overset{\circ}{\text{haṭa}}^{\text{an}}$, xa.ta'iN $\overset{\circ}{\text{خَطَّ}}$ $\overset{\circ}{\text{haṭa}}^{\text{in}}$, 'aqra'u $\overset{\circ}{\text{أَقْرَأَ}}$ $\overset{\circ}{\text{aqrā}}^{\text{u}}$, taqra'Ina $\overset{\circ}{\text{تَقْرِئَنَ}}$ $\overset{\circ}{\text{taqra}}^{\text{īna}}$, taqra'Una $\overset{\circ}{\text{تَقْرِئُونَ}}$ $\overset{\circ}{\text{taqra}}^{\text{ūna}}$, yaqra'na $\overset{\circ}{\text{يَقْرَأُنَ}}$ $\overset{\circ}{\text{yaqra}}^{\text{na}}$, yaxba'Ani $\overset{\circ}{\text{يَخْبَأُنَ}}$ $\overset{\circ}{\text{yahba}}^{\text{āni}}$, xaba'A $\overset{\circ}{\text{خَبَأَ}}$ $\overset{\circ}{\text{haba}}^{\text{ā}}$, xubi'a $\overset{\circ}{\text{خُبِيَّ}}$ $\overset{\circ}{\text{hubi}}^{\text{a}}$, xubi'UA $\overset{\circ}{\text{خُبِيُّو}}$ $\overset{\circ}{\text{hubi}}^{\text{ū}}$, ja'a $\overset{\circ}{\text{جَاءَ}}$ $\overset{\circ}{\text{gā}}^{\text{a}}$, ridA'un $\overset{\circ}{\text{رَدَّ}}$ $\overset{\circ}{\text{ridā}}^{\text{un}}$, ridA'an $\overset{\circ}{\text{رَدَّ}}$ $\overset{\circ}{\text{ridā}}^{\text{an}}$, jI'a $\overset{\circ}{\text{جِيءَ}}$ $\overset{\circ}{\text{gī}}^{\text{a}}$, radI'in $\overset{\circ}{\text{رَدِيَّ}}$ $\overset{\circ}{\text{radī}}^{\text{in}}$, sU'un $\overset{\circ}{\text{سُوَءَ}}$ $\overset{\circ}{\text{sū}}^{\text{un}}$, .daw'uN $\overset{\circ}{\text{ضَوَءَ}}$ $\overset{\circ}{\text{daw}}^{\text{un}}$, qay'iN $\overset{\circ}{\text{قَيَّ}}$ $\overset{\circ}{\text{qay}}^{\text{in}}$, ^sifA'I $\overset{\circ}{\text{شِفَائِيَ}}$ $\overset{\circ}{\text{ṣifā}}^{\text{i}}$, man^sa'I $\overset{\circ}{\text{مَنْشَائِيَ}}$ $\overset{\circ}{\text{manṣā}}^{\text{i}}$.

$\overset{\circ}{\text{say}}^{\text{ulN}} \overset{\circ}{\text{شَيْءَ}}$ $\overset{\circ}{\text{say}}^{\text{un}}$, $\overset{\circ}{\text{say}}^{\text{an}} \overset{\circ}{\text{شَيْءَ}}$ $\overset{\circ}{\text{say}}^{\text{an}}$, $\overset{\circ}{\text{say}}^{\text{in}} \overset{\circ}{\text{شَيْءَ}}$ $\overset{\circ}{\text{say}}^{\text{in}}$, al- $\overset{\circ}{\text{say}}^{\text{-u}}$ $\overset{\circ}{\text{say}}^{\text{-u}}$, 'a^syA'-u $\overset{\circ}{\text{أَشِيَاءَ}}$ $\overset{\circ}{\text{aṣyā}}^{\text{u}}$, 'a^syA'-a $\overset{\circ}{\text{أَشِيَاءَ}}$ $\overset{\circ}{\text{aṣyā}}^{\text{a}}$, .zim'aN $\overset{\circ}{\text{ظِيمَانَ}}$ $\overset{\circ}{\text{zim}}^{\text{an}}$.

tahfif^u 'l-hamzatⁱ: if the *hamzah* has *gazmah* and is preceded by *'alif hamzatum*, it must be changed into the letter of prolongation that is homogeneous with the preceding vowel; hence: 'a'mana $\overset{\circ}{\text{آمَنَ}}$ $\overset{\circ}{\text{āmana}}$, 'u'minu $\overset{\circ}{\text{أُمِنَ}}$ $\overset{\circ}{\text{ūminu}}$, i'mAnuN $\overset{\circ}{\text{إِيمَانٌ}}$ $\overset{\circ}{\text{īmān}}^{\text{un}}$. For other possible ways of encoding such sequences, see on page 13 (*hamzah* followed by و and ي) and the *maddah* on the current page.

maddah At the beginning of a syllabe, *'alif* with *hamzah* and *fathah* (ִ) followed by *'alifu 'l-maddi* ('alif of prolongation) or *'alif* with *hamzah* and *gazmah* (ֵ) are both represented in writing *'alif* with *maddah*: ְ (see Wright 1896, i. 25 A–B).

Hence one should keep to this distinction and encode 'a'kulu $\overset{\circ}{\text{كُلُّ}}$ $\overset{\circ}{\text{ākulu}}$ and 'AkiluN $\overset{\circ}{\text{كِلُّ}}$ $\overset{\circ}{\text{ākil}}^{\text{un}}$ respectively.

arabluatex otherwise determines *al-'alif^u 'l-mamdudat^u* by context analysis.

'is'AduN $\overset{\circ}{\text{إِسَادَ}}$ $\overset{\circ}{\text{is}}^{\text{adun}}$, 'AkilUna $\overset{\circ}{\text{كِلُونَ}}$ $\overset{\circ}{\text{ākilūna}}$, 'a'mannA $\overset{\circ}{\text{آمَنَّ}}$ $\overset{\circ}{\text{āmannā}}$, al-qur'An-u $\overset{\circ}{\text{الْقُرْآنَ}}$ $\overset{\circ}{\text{al-qurān}}^{\text{u}}$,
jA'a $\overset{\circ}{\text{جَاءَ}}$ $\overset{\circ}{\text{gā}}^{\text{a}}$, yatasA'alUna $\overset{\circ}{\text{يَتَسَاءَلُونَ}}$ $\overset{\circ}{\text{yatasa}}^{\text{ālūna}}$, ridA'uN $\overset{\circ}{\text{رَدَّ}}$ $\overset{\circ}{\text{ridā}}^{\text{un}}$,
xaba'A $\overset{\circ}{\text{خَبَأَ}}$ $\overset{\circ}{\text{haba}}^{\text{ā}}$, yaxba'Ani $\overset{\circ}{\text{يَخْبَأُنَ}}$ $\overset{\circ}{\text{yahba}}^{\text{āni}}$.

šaddah *tašdīd* is either *necessary* or *euphonic*.

The necessary tašdīd always follows a vowel, whether short or long (see Wright 1896, i. 15 A–B). It is encoded in writing the consonant that carries it twice:

ـَالْعَلَقَ *allaqa*, مَادٌ *māddun*, أَمْرٌ *ammara*, مُرْرُونٌ *murrūn*.

The euphonic *taṣdīd* always follows a vowelless consonant which is passed over in pronunciation and assimilated to a following consonant. It may be found (Wright 1896, i. 15 B–16 C):—

- (a) With the *solar* letters ن, ل, ظ, ط, ض, ص, ش, س, ز, ر, ذ, د, ث, ت, after the article الـ:—

Unlike arabtex and arabxetex, arabluatex never requires the solar letter to be written twice, as it automatically generates the euphonic *taṣdīd* above the letter that carries it, whether the article be written in the assimilated form or not, e.g. الـشَّمْسُ *aš-šamsu*, or aـsـ الـشَّمْسُ *aš-šamsu*.

al-tamr-u الـثَّمْرُ *at-tamru*, al-ra.hm_an-u الـرَّحْمَنُ *ar-rahmānu*, al-.zulm-u الـظُّلْمُ *aż-zulmu*, al-lu.gaT-u الـلُّغَةُ *al-lugatū*.

- (b) With the letters ي, و, م, ل, ر, ن after with *ğazmah*, and also after the *tanwīn*:—

Note the absence of *sukūn* above the passed over ن in the following examples, each of which is accompanied by a consistent transliteration: من يَلِي min rabihi, من رَبِّهِ min layliN mil laylin, 'اَن يَقْتُلَ 'an yaqtula.

With *tanwīn*: kitAbuN mubInuN كِتَابٌ مُبِينٌ *kitāb um mubīnu*.

REM. This particular feature must be put into operation by the \SetArbDfl* command explicitly. See above section 2.2.1 on page 5 for further details. Other kinds of assimilations, including the various cases of *'idgām*, will be included in arabluatex gradually.

- (c) With the letter ت after the dentals ظ, ط, ض, ذ, د, ث in certain parts of the verb: this kind of assimilation, e.g. لَيْتُ for لَبَّيْتُ *labittu*, will be discarded here, as it is largely condemned by the grammarians (see Wright 1896, i. 16 B–C).

The definite article and the 'alif' 'l-waṣlⁱ At the beginning of a sentence, ' is never written, as أَمْدُ اللَّهُ; instead, to indicate that the 'alif is a connective 'alif ('alif^u 'l-waṣlⁱ), the *hamzah* is omitted and only its accompanying vowel is expressed:

al-.hamd-u li-l-l_ah-i أَمْدُ اللَّهُ *al-hamd u li-llāh i*.

As said above on page 5, `fullvoc` is the mode in which `arabluatex` expresses the *sukūn* and the *waslah*. `arabluatex` will take care of doing that automatically provided that the vowel which is to be absorbed by the final vowel of the preceding word be properly encoded, like so:—

- (a) Definite article at the beginning of a sentence is encoded
‘al-’, or ‘a<solar letter>’
if one wishes to mark the assimilation—which is in no way required, as `arabluatex` will detect all cases of assimilation.
- (b) Definite article inside sentences is encoded
‘l-’ or ‘<solar letter>-’.
- (c) In all remaining cases of elision, the *’alifu ’l-wasli* is expressed by the vowel that accompanies the omitted *hamzah*: {*u, a, i*}.

Article: bAb-u 'l-madrasaT-i بَابُ الْمَدْرَسَةِ bāb^u 'l-madrasatⁱ, al-maqA laT-u 'l-'Ul_A المَقَالَةُ الْأُولَى al-maqālat^u 'l-'ūlā, al-lu.gaT-u 'l-'ara biyyaT-u الْلُّغَةُ الْعَرَبِيَّةُ al-lugat^u 'l-'arabiyyat^u, fI .sinA`aT-i 'l-.tibb-i إِلَى الْإِنْقَاضِ fi sinā'ati 't-tibbⁱ, 'il_A 'l-intiqA.d-i في صِنَاعَةِ الْطِبِّ 'ila 'l-intiqādⁱ, fI 'l-ibtidA'-i في الْإِبْتِدَاءِ 'ila 'l-ibtidāⁱ, 'abU 'l-wazIr-i أَبُو الْوَزِيرِ abu 'l-wazīrⁱ, fa-lammA ra'aW 'l-najm-a فَلَمَّا رَأَوا النَّجْمَ fa-lammā ra'awu 'n-naqm^a.

Particles:—

- (a) *li-*: *’alifu ’l-wasli* is omitted in the article لـ when it is preceded by the preposition لـ: li-l-rajul-i لِلرَّجُلِ li-r-rağulⁱ.
If the first letter of the noun be لـ, then the لـ of the article also falls away, but `arabluatex` is aware of that: li-l-laylaT-i لِلَّيْلَةِ li-laylatⁱ.
- (b) *la-*: the same applies to the affirmative particle لـ: la-l-.haqq-u لِلْحَقِّ la-l-haqq^u.
- (c) With the other particles, *’alifu ’l-wasli* is expressed: fI 'l-madIna T-i fi 'l-madīnatⁱ, wa-'l-rajul-u وَالرَّجُلُ wa-'r-rağul^u, bi-'l-qalam-i بِالْقَلْمَنْ bi-'l-qalamⁱ, bi-'l-ru'b-i بِالْرُّبْعِ bi-'r-ru'bⁱ.

Perfect active, imperative, nomen actionis: qAla isma` قَالَ أَسْمَعَ qāla 'sma^u, qAla uqtul قَالَ أَقْتُلَ qāla 'qtul, huwa inhazama هوَ آنْهَمَ huwa 'nhazama, wa-ustu'mila وَاسْتَعْمَلَ wa-'stu'mila, qad-i in.sarafa قدِ اَنْصَرَفَ qadi 'nṣarafa, al-iqtidAr-u الْإِقْتِدَارُ al-iqtidār^u, 'il_A 'l-intiqA.d-i إِلَى الْإِنْقَاضِ 'ila 'l-intiqādⁱ, law istaqbala لَوْ أَسْتَقْبَلَ lawi 'staqbala.

Other cases: 'awi ismu-hu *أَوْ أَسْمَهُ 'awi 'smu-hu*, zayduN ibn-u `amriNU زَيْدُ بْنُ عَمْرٍو Zayd^{uni} bn^u 'Amrⁱⁿ,¹⁶ `umar-u ibn-u 'l_ ha.t.tAb-i عمر زَيْدُ بْنُ عَمْرٍو Umar^u bn^u l-Hattabⁱ,¹⁷ imru'-u 'l-qays-i إِمْرُؤُ الْقَيْسِ Imru^u 'l-Qaysⁱ, la-aymun-u 'l-l_ah-i لَا يَعْنِي اللَّهُ la-'ymun^u l-lāhⁱ.

'alif^u 'l-waṣlⁱ preceded by a long vowel The long vowel preceding the connective *'alif* is shortened in pronunciation (Wright 1896, i. 21 B-D). This does not appear in the Arabic script, but arabluatex takes it into account in some transliteration standards:—

fI 'l-nAs-i fi 'n-nāsⁱ, 'abU 'l-wazIr-i أبو الْوَزِيرِ fi 'l-wazīrⁱ,
fI 'l-ibtidA-i ذُو الْإِبْتِدَاءِ fi 'l-ibtidāⁱ, _dU 'l-i`lAl-i du ذُو الْأَعْلَى
'l-ilālⁱ, maqh_A 'l-'amIr-i مقْهِي الْأَمِيرِ maqha 'l-'amīrⁱ.

'alif^u 'l-waṣlⁱ preceded by a diphthong The diphthong is resolved into two simple vowels (Wright 1896, i. 21 D-22 A) viz. *ay* → *ăi* and *aw* → *ău*. arabluatex detects the cases in which this rule applies:—

fI `aynay 'l-malik-i في عَيْنِ الْمَلِكِ fi 'aynayi 'l-malikⁱ, ix^say 'l-qaw m-a مُصْطَفُو اللَّهِ ihšayi 'l-qawm^a, mu.s.tafaw 'l-l_ah-i muṣṭa-fawu 'l-lāhⁱ.
ramaW 'l-.hijAraT-a رَمَوْا نِجَارَةً ramawu 'l-hiğārat^a, fa-lammA ra'aW 'l-najm-a فَلَمَّا رَأَوْا النَّجْمَ fa-lammā ra'awu 'n-nağm^a.

'alif^u 'l-waṣlⁱ preceded by a consonant with sukūn The vowel which the consonant takes is either its original vowel, or that which belongs to the connective *'alif* or the *kasrah*; in most of the cases (Wright 1896, i. 22 A-C), it is encoded explicitly, like so:—

'antumu 'l-kA_dib-Una أَنْتُمُ الْكَذَّابُونَ 'antumu 'l-kādib^{ūna}, ra'aytumu 'l-rajuł-a رَأَيْتُمُ الْرَّجُلَ ra'aytumu 'r-rağul^a, mani 'l-ka_d_dAb-u من الْكَذَّابُ mani 'l-kadđāb^u, qatalati 'l-rUm-u قَتَلْتُ لَرْوُمُ qatalati 'r-Rūm^u.

However, the Arabic script does not show the *kasrah* or the *dammah* which may be taken by the nouns having *tanwīn* although it is explicit in pronunciation and must appear in some transliteration standards. arabluatex takes care of that automatically:—

¹⁶ “Zayd is the son of *Amr*”: the second noun is not in apposition to the first, but forms part of the predicate. Hence زَيْدُ بْنُ عَمْرٍو and not زَيْدُ ابْنُ عَمْرٍو, “Zayd, son of ‘Amr”.

¹⁷ “Umar is the son of *al-Hattab*” (see footnote 16).

mu.hammaduN 'l-nabI مُحَمَّدٌ النَّبِيُّ Muhammad^{uni} 'n-nabiⁱ, salAmuN ud_hulUA
 سَلَامٌ دَخْلُوا salām^{unu} 'dhu'lū, qa.sIdata-hu fI qatl-i \cap{'a}bI
 قَصِيدَتُهُ فِي قَتْلِ أَيِّ مُسْلِمٍ الَّتِي يَقُولُ \cap{m}uslimiN 'llatI yaqUlu fI-hA
 فِيهَا qasīdata-hu fī qatlⁱ 'Abī Muslimⁱⁿⁱ 'llatī yaqūlu fī-hā.

4.3 Special orthographies

The name of God The name of God, ﷺ, is compounded of the article الْ, and إِلَهٌ (noted إِلَهٌ with the defective 'alif) so that it becomes إِلَّا هُوَ; then the *hamzah* is suppressed, its vowel being transferred to the ل before it, so that there remains إِلَّا (I refer to Lane, *Lexicon*, I. 83 col. 1). Finally, the first ل is made quiescent and incorporated into the other, hence the *taṣdīd* above it. As arabluatex never requires a solar letter to be written twice (see above, on page 15), the name of God is therefore encoded al-1_ah-u or 'l-l_ah-u:—

al-l_ah-u إِلَّا al-lāh^u, yA|¹⁸ al-l_ah-u يَا إِلَهُ yā al-lāh^u, 'a-fa|¹⁹-al-
 l_ah-i la-ta.g`alanna أَفَاللهُ لَنْغَلَنَّ a-fa-al-lāhⁱ la-taq`alanna, bi-'l-
 l_ah-i بِإِلَهٍ bi-'l-lāhⁱ, wa-'l-l_ah-i وَاللهُ wa-'l-lāhⁱ, bi-sm-i 'l-l_ah-i
 بِسْمِ اللهِ bi-smⁱ 'l-lāhⁱ, al-.hamd-u li-'l-l_ah-i الْحَمْدُ لِللهِ al-hamd^u li-llāhⁱ,
 li-'l-l_ah-i 'l-qA'il-u لِللهِ الْقَائِلُ li-llāhⁱ 'l-qā'il^u.

The conjunctive الَّذِي Although it is compounded of the article الْ, the demonstrative letter ل and the demonstrative pronoun ذ, both masculine and feminine forms that are written defectively are encoded alla_dI and allatI respectively. Forms starting with the connective 'alif are encoded 'lla_dI and 'llatI:—

'a_hAfu mina 'l-malik-i 'lla_dI ya.zlimu 'l-nAs-a أَخَافُ مِنَ الْمَلِكِ
 ahāfu mina 'l-malikⁱ 'lladī yazlimu 'n-nās^a, `udtu
 عُدْتُ الشَّيْخَ الَّذِي هُوَ مَرِيضٌ 'udtu
 'l-^say_h-a 'lla_dI huwa marI.duN 's-ṣayh^a 'lladī huwa marīd^{un}, mA 'anA bi-'lla_dI qA'iluN la-ka
 مَا أَنَا بِالَّذِي قَاتَلَ لَكَ شَيْئًا ^say'an.
 'ari-na 'lla_dayni 'a.dalla-nA mina 'l-jinn-i wa-'l-'ins-i
 ارِنَا الَّذِينَ أَضَلَّا مَا نَجَنَّ وَالْأَنْسُ wa-'l-'insⁱ.

¹⁸Note the “pipe” character ‘|’ here after yA and below after fa before footnote mark 19: it is needed by the *dmg* transliteration mode as in this mode any vowel at the commencement of a word preceded by a word that ends with a vowel, either short or long, is absorbed by this vowel viz. 'alq 'l-ṭarīqⁱ. See section 4.5 on page 21 on the “pipe” and section 7 on page 30 on *dmg* mode.

¹⁹See footnote 18.

The other forms are encoded regularly as al-l or 'l-l:—

fa-'innA na_dkuru 'l-.sawt-ayni 'l-la_dayni rawaynA-humA `an
 ja.h.zaT-a فَإِنَّا نَذْكُرُ الصَّوْتَيْنَ الَّذِيْنَ رَوَيَا هُمَا عَنْ حَظَّةَ
 'l-la_dayni rawaynā-humā 'an Ġahzat^a.

And also: al-la_dAni اللَّذَانِ al-ladāni, al-la_dayni al-ladayni,
 al-latAni اللَّاتَانِ al-latāni, al-latayni al-latayni, al-lAtI اللَّاتِي al-lātī,
 al-1A'|Ati²⁰ الَّاتِيَّاتِ al-lātīti, al-1A'I الَّاتِيِّيَّاتِ al-lātīti, and so forth.

4.4 Quoting

It is here referred to “quoting” after the arabtex package.²¹ The “quoting” mechanism of arabluatex is designed to be very similar in effect to the one of arabtex.

To start with an example, suppose one types the following in novoc mode: علم علم الميئه; is it علم, he was taught the science of astronomy, or علم, he taught the science of astronomy? In order to disambiguate this clause, it may be sensible to put a *dammah* above the first علم, علم الميئه: ع, which is achieved by “quoting” the vowel u, like so: `"ullima, or, with no other vowel than the required u: `"ullm.

This is how the “quoting” mechanism works: metaphorically speaking, it acts as a *toggle switch*. If something, in a given mode, is supposed to be visible, “quoting” hides it; conversely, if it is supposed not to, it makes it visible.

As shown above, “quoting” means inserting one straight double quote ("") before the letter that is to be acted upon. Its effects depend on the mode which is currently selected, either novoc, voc or fullvoc:—

novoc In this mode, “quoting” essentially means make visible something that ought not to be so.

(a) Quoting a vowel, either short or long, makes the *dammah*, *fathah* or *kasrah* appear above the appropriate consonant:—

`"ullima `ilm-a 'l-hay'aT-i علم الميئه `ullima ilm-a 'l-hay'atⁱ,
 ya.gz"UA يغزوا yagzū.

(b) The same applies when “quoting” the *tanwīn*:—

wa-'innA sawfa tudriku-nA 'l-manAyA muqadd"araT"aN وَإِنَّا سُوفَ تُدْرِكُ الْمَنَى مُقدَّرَةً wa-innā sawfa tudriku-na 'l-manāyā mugaddarat^{an}.

(c) If no vowel follows the straight double quote, then a *sukūn* is put above the preceding consonant:—

²⁰Note here the “pipe” character '|: as already stated on page 14, the sequence 'A usually encodes 'alif with *hamzah* followed by 'alif of prolongation, which is represented in writing 'alif with *maddah*: ī. The “pipe” character prevents this rule from being applied. See section 4.5 on page 21.

²¹See Lagally (2004, p. 22)

جَاءَتْ هِنْدٌ qāla 'sma^s, jA'at^s hinduN ġā'at
 Hind^{un}, ^sabIhuN bi-man q"u.ti`at^s qadamA-hu
 شَبِيهٌ بَنْ قُطْعَتْ قَدْمَاهَ šabīh^{un} bi-man quṭi`at qadamā-hu.

- (d) At the commencement of a word, the straight double quote is interpreted as '*alif*' *'l-waṣl*:-

وَأَسْتَعْمَلُ wa-^sstu'mila, huwa "inhazama هو انہزم
 'nhazama, al-^sintiqA.d-u الْمُتَقَاضِ al-intiqād^s.

voc In accordance with the general rule, in this mode, “quoting” makes the vowels and the *tanwīn* disappear, should this feature be required for some reason:—

- (a) Short and long vowels:—

q"Ala q"A'iluN قَالَ قَائِلٌ qāla qā'i^{lun}, ibn-u 'abI 'u.saybi`aT-a
 إِنْ أَيْ أَصْبَعَةً Ibn^s Abī Uṣaybi`at^s.

- (b) *tanwīn*:—

madInaT"aN مدِيَّةٌ madīnat^s, bAb"aN بَابٌ bāb^s, hud"aN_A هُدَىٰ hudā^s,
 ^say'"iN شَيْءٌ šayⁱⁿ.

One may more usefully “quote” the initial vowels to write the *waṣlah* above the *'alif* or insert a straight double quote after a consonant not followed by a vowel to make the *sukūn* appear:—

- (a) '*alif*' *'l-waṣl*:-

fI "istisqA'-a فِي أَسْتِسْقَاءَ fi 'stisqā'a, wa-^sistiṣqā'-u وَأَسْتِسْقَاءَ-u wa-'s-
 tisqā'a, qAla "ührub fa-lan tuqtala قَالَ أَهْرُبْ فَلَنْ تُقتلَ qāla ḥrub fa-
 lan tuqtala.

- (b) *sukūn*:—

qAla "uqtul" fa-lan tuqtala قَالَ أَقْتُلْ فَلَنْ تُقتلَ qāla 'qtul fa-lan
 tuqtala, mA jA'at^s mini imra'aTiN مَا جَاءَتْ مِنْ امْرَأَةٍ mā ġā'at mini
 'mra'a^{at in}, kam" qad" ma.dat" min" laylaTiN kam
 كَمْ قَدْ مَضَتْ مِنْ لَيْلَةٍ qad madat min laylatⁱⁿ.

fullvoc In this mode, “quoting” may be used to take away any short vowel (or *tanwīn*, as seen above) or any *sukūn*:—

أَبْجُورُ الْأَصْبَعِيُّ al-jamr-u 'l-.sayfiyy-u 'lla_dI kAna bi-q"rAn" | nUn-a
 al-ġamr^s al-ġamr^s ḥayfiyy^s llađi kāna bi-Qrānnūn^s.

4.4.1 Quoting the hamzah

As said above in section 4.2 on page 13, the *hamzah* is always written ‘ ’, its carrier being determined by contextual analysis. “Quoting” that straight single quote character like so: ‘ ’ allows to determine the carrier of the *hamzah* freely, without any consideration for the context. Table 4 gives the equivalents for all the possible carriers the *hamzah* may take.

Letter	Transliteration ²²	ArabTeX notation
dmg	loc	
ء	ء	ء
أ	أ	أ
إ	إ	إ
ئ	ئ	ئ
و	و	و
ۈ	ۈ	ۈ
ۈ	ۈ	ۈ
ۈ	ۈ	ۈ

Table 4: “Quoted” *hamzah*

As one can see from table 4, the carrier of the *hamzah* is inferred from the letter that precedes the straight double quote ‘“’. Of course, any “quoted” *hamzah* may take a short vowel, which is to be written *after* the ArabTEX equivalent for the *hamzah* itself, namely ‘‘’. For example, ة is encoded *w”’a*, while ة is encoded *w””*. In the latter example, the second straight double quote encodes the *sukūn* in *voc* mode in accordance with the rule laid above on pages 19–20.

'^{أَعْدَاءُ}^{كُمْ} 'a`dā'ukum, '^{أَعْدَاءُ}^{كُمْ} 'a`dā'ikum, '^{أَعْدَاءُ}^{كُمْ} 'a`dā'ikum.

4.5 The “pipe” character ()

In the terminology of ArabTeX, the “pipe” character ‘|’ is referred to as the “invisibly consonant”. Hence, as already seen above in section 4.4.1, its usage to encode the *hamzah* alone, with no carrier: | “ ” .

Aside from that usage, the “pipe” character is used to prevent almost any of the contextual analysis rules that are described above from being applied. Two examples have already been given to demonstrate how that particular mechanism works in footnote 18 on page 18 and in footnote 20 on page 19. One more example follows:—

²³ bi-qrAn|nUn-a بِقَرَانْوَنْ *bi-Qrānnūn^a*, “in Crannon” (Thessaly, Greece).

²²See below section 7 on page 30.

²³ See more context on page 20.

As one can see, the “pipe” character between the two $\langle n \rangle$ prevents the necessary *taṣdīd* rule (page 14) from being applied.

4.6 Putting back on broken contextual analysis rules

New feature
v1.7

In complex documents such as critical editions where footnotes and other kind of annotations can be particularly abundant, the contextual analysis rules that are described above may be broken by L^AT_EX commands. To take an example, consider the following:—

```

1 This is wrong:
2 \begin{arab}[fullvoc]
3   fa-lammaA ra'aW\LRfootnote{A footnote that interferes with the
4     contextual analysis.} 'l-na^gma...
5 \end{arab}

```

This is wrong:

فَلَمَّا رَأَوْا الْنَّجْمَ ...^a

^a A footnote that interferes with the contextual analysis.

According to the rule stated on page 17, the diphthong in *ra'aw* must be resolved into two simple vowels before the *'alif* *'l-waṣlⁱ*, as رَأُوا النَّجْمَ.

`\arbnul` The `\arbnul` command is provided so as to put back on contextual analysis rules in such situations. It takes as argument the word that must be brought back for any given rule to be applied as it ought to. Depending on the contexts that have to be restored, `\arbnul` may be found just after or before Arabic words.

In any case, *no space must be left* after or before the Arabic word that `\arbnul` is applied to.

The following shows how the Arabic should have been written in the preceding example and gives further illustrations of the same technique:—

```

1 \begin{arab}[fullvoc]
2   fa-lammaA ra'aW\arbnul{'l-na^gma}\LRfootnote{A footnote that
3     interferes with the contextual analysis.} 'l-na^gma...
4 
5 qAla\LRfootnote{A footnote that interferes with the contextual
6     analysis.} \arbnul{qAla}ührub fa-lan tuqtala.
7 
8 \cap{z}ayduN\arbnul{ibnu}\LRfootnote{A footnote that interferes
9     with the contextual analysis.} \arbnul{zayduN}ibn-u
10 \cap{`a}mrinU.\LRfootnote{See \vref{fn:zayd-is-son}.}
11 \end{arab}

```

```

12 \begin{arab}[trans]
13   \cap{z}ayduN\arbnul{ibnu}\LRfootnote{A footnote that interferes
14     with the contextual analysis.} \arbnul{zayduN}ibn-u
15   \cap{`a}mriNU.\LRfootnote{See \vref{fn:zayd-is-son}.}
16 \end{arab}

```

فَلَمَّا رَأَوْا ^aالنَّجْمَ...
 قَالَ أَهْرُبْ فَلَمْ تُقْتَلَ.
 زَيْدُ ^dابْنُ عَمْرُو.

Zayd^{uni} bn^u Amrⁱⁿ.^f

^aA footnote that interferes with the contextual analysis.

^bA footnote that interferes with the contextual analysis.

^cA footnote that interferes with the contextual analysis.

^dSee footnote 16 on page 17.

^eA footnote that interferes with the contextual analysis.

^fSee footnote 16 on page 17.

4.7 Stretching characters: the tatwīl

A double hyphen ⟨--⟩ stretches the ligature in which one letter is bound to another. Although it is always better to rely on automatic stretching, this technique may be used to a modest extent, especially to increase legibility of letters and diacritics which stand one above the other:-

.hunayn-u bn-u 'is.h--_aq-a حُنَيْنُ بْنُ إِسْعَنْ Hunayn^u bn^u Ishāq^a

4.8 Digits

4.8.1 Numerical figures

The *Indian numbers*, *ar-raqam^u* 'l-hindiy^u, are ten in number, and they are compounded in exactly the same way as our numerals:—

١٨٧٤، ١٢٣-٤٥٦، ٧٨٩، fI sanaT-i ١٠٢٤ في سَنَةِ

4.8.2 The abjad

The numbers may also be expressed with letters from right to left arranged in accordance with the order of the Hebrew and Aramaic alphabets (see Wright 1896, i. 28 B-C). The *'abgad* numbers are usually distinguished from the surrounding words by a stroke placed over them.

\abjad

'abgad numbers are inserted with the \abjad{\<number>} command in any of the *voc*, *fullvoc* and *novoc* modes, where *<number>* may be any number between 1 and 1999, like so:—

New feature
v.1.1

\abjad{45} kitAbu-hu fI 'l-`AdAt-i مَهِ كِتابَهُ فِي الْعَادَاتِ 45 kitābu-hu fi 'l-`adātⁱ.

REM. a. As can be seen in the above given example, arabluatex expresses the 'abjad numbers in Roman numerals if it finds the \abjad command in any of the transliteration modes.

REM. b. \abjad may also be found outside Arabic environments. In that case, arabluatex does not print the stroke as a distinctive mark over the number for it is not surrounded by other Arabic words. In case one nonetheless wishes to print the stroke, he can use the \aemph command that is described below in section 4.10 on the next page:—

The \arb[trans]{'abjad} number for 1874 is \abjad{1874} The 'abjad number for 1874 is غَضَلٌ.

The \arb[trans]{'abjad} number for 1874 is \aemph{\abjad{1874}} The 'abjad number for 1874 is غَضَلٌ.

4.9 Additional characters

In the manuscripts, the unpointed letters, *al-ḥurūfu ḥ-l-muhmalatu*, are sometimes further distinguished from the pointed by various contrivances, as explained in Wright (1896, i. 4 B–C). One may find these letters written in a smaller size below the line, or with a dot or another mark below. As representing all the possible contrivances leads to much complexity and also needs to be agreed among scholars, new ways of encoding them will be proposed and gradually included as arabluatex will mature.

For the time being, the following is included:—

Letter	Transliteration ²⁴		ArabTeX notation
	dmg	loc	
ب	b	b	.b
د	đ	d	^d
ف	f	f	.f
ق	q	q	.q
ك	k	k	.k
ن	ñ	n	.n
(((((
)))))

Table 5: Additional Arabic codings

'afAman.tUs Gal.(M) .fmn.n.ts (sic) Gal.(E1), Gal.(M) (sic)
فَمِنْطَسْ أَفَامَنْطُوسْ Gal.(E1), 'afāmanṭūs Gal.(M) fmnn̄ts (sic) Gal.(E1).

²⁴See below section 7 on page 30.

4.10 Arabic emphasis

As already seen in section 4.8.2 on page 23, the *'abḡad* numbers are distinguished from the surrounding words by a stroke placed over them. This technique is used to distinguish further words that are proper names or book titles.

\aemph

One may use the \aemph{\{Arabic text\}} command to use the same technique to emphasize words, like so:—

\abjad{45}: kitAbu-hu \aemph{fI 'l-`AdAt-i} مَدَّ كَابِهٌ فِي الْعَادَاتِ 45:
kitābu-hu fi 'l-`Adātⁱ.

5 Arabic poetry

New feature
v1.6

arabverse

arabluatex provides a special environment for typesetting Arabic poetry. Every line in this environment must end with \\.

The arabverse environment may take up to six optional ‘named arguments’ each of which is set using the syntax *<key>=<value>*, like so:—

```
1 \begin{arabverse}[key1=value1, key2=value2, ...]  
2   <verses>  
3 \end{arabverse}
```

The description of the optional arguments follows:—

mode

mode=\i{mode}, either `voc`, `fullvoc`, `novoc` or `trans`. The default mode is the one that is set at load time as already seen section 2.2 on page 5.

width

width=\i{length} Default: 0.3\linewidth
The default width of each hemistich that the verse consists of. It may be expressed in any accepted unit of measurement, such as `4cm` or `2in`. However, one must keep in mind that the total length of the two hemistichs added to the one of the gutter that separates them must not exceed the length of the base line, unless one wishes to have the hemistichs distributed on subsequent lines.

gutter

gutter=\i{width} Default: 0.15 x (hemistich width)
The gutter consists of the blank space that is between the two hemistichs. By default, it is commensurate with the width of the hemistich, but it may be expressed in any accepted unit of measurement as well.

metre

metre=\i{name} Default: none
If the name of the metre is expressed, it is printed after the lines and set flush left in `voc`, `fullvoc` and `novoc` modes or flush right in `trans` mode.

delim

delim=\i{true|false} Default: false
This named argument does not need a value as it defaults to `true` if it is used. If so, a delimiter is printed between each of the hemistichs. By default, it is set to the ‘star’ character ‘*’. The \SetHemistichDelim{\i{delimiter}} command may be used at any point of the document to change this default setting.

\SetHemistichDelim

utf=\i{true|false} Default: false

As the preceding one, this named argument does not need a value as it defaults to `true` if it is used. If so, unicode Arabic input is expected in the `arabverse` environment instead of ASCII ArabTeX or Buckwalter input schemes. See section 9 on page 35 for more details.

\bayt

Inside the `arabverse` environment, each line is typeset by the `\bayt` command which takes two mandatory arguments and may accept one optional argument. Additionally, every `\bayt` command *must* be followed with `\\"` like so:—

```
\bayt{\⟨sadr⟩} [⟨tadwīr⟩] {\⟨ağuz⟩}\\"
```

That two subsequent hemistichs should be connected with one another is technically named *tadwīr*. Should that happen, either the *sadr* or the *ağuz* or both of them, may be connected to one another by letters that are naturally bound to the following or the preceding ones over the *tadwīr*. The optional argument of the `\bayt` command is designed to deal with the various situations that may arise:—

- (a) If the two hemistichs be connected with one another by a prominent horizontal flexible stroke, the *taṣwīl* should be used, like so: `[--]` (see section 4.7 on page 23). Of course, the ending word of the *sadr* and the word at the commencement of the *ağuz* must have the *taṣwīl* too so that the proper shapes of the letters be selected. Consider for example the following:—

```
1 \begin{arabverse}[mode=fullvoc, width=.3\linewidth]
2   \bayt{1A 'ar_A man `ahidtu fI-hA fa-'abkI 'l---}{---yawma
3     dalhaN wa-mA yaruddu 'l-bukA'u}\\
4 \end{arabverse}
```

لَا أَرِي مَنْ عَاهَدْتُ فِيهَا فَأَبْكِي الْمَوْمَدَهَا وَمَا يَرُدُّ الْبَكَاءُ

As one can see, *triple hyphens* have been used. In the *sadr*, the first hyphen triggers the rules that are related to the definite article and the *'alif^u* *'l-waṣlⁱ*,²⁵ while the following two select the figure of the letter *lām* connected with a following letter. In the *ağuz*, the last two hyphens select the letter *yā'* connected with a preceding letter, while the first one is simply discarded in this mode, but still may appear as it should, if the `trans` mode be selected:—

```
1 \begin{arabverse}[mode=trans, width=.4\linewidth]
2   \bayt{1A 'ar_A man `ahidtu fI-hA fa-'abkI 'l---}{---yawma
3     dalhaN wa-mA yaruddu 'l-bukA'u}\\
4 \end{arabverse}
```

lā 'arā man 'ahidtu fī-hā fa-'abki 'l- -yawma dalhān wa-mā yaruddu 'l-bukā'u

²⁵ See section 4.2 on page 15

- (b) In some other cases, it may seem difficult, if not fairly impossible, to split a given word into two parts. This happens mostly because of the *saddah*. Consider for example the following:—

```

1 \begin{arabverse}[mode=fullvoc, width=.25\linewidth, gutter=1cm]
2   \bayt{.gayra 'annI qad 'asta`Inu `al_A 'l-ha--}{--mmi }{'i_dA
3   _haffa bi-'l-_tawiyyi 'l-na^gA'u}\\
4   \bayt{bi-zaf--UfiN ka-'anna-hA hiq--laTuN}{ 'ummu }{ri'AliN
5   dawwiyyaTuN saqfA'u}\\
6 \end{arabverse}

```

غَيْرَ أَنِّي قَدْ أَسْتَعِنُ عَلَى الْهَمْ
 إِذَا خَفَ بِالْثَوْبِيِّ الْنَجَاءُ
 بِزَقْفُوفٍ كَانَهَا هِلَةً أُمٌّ رِئَالٌ دَوْيَةً سَقْفَاءُ

In the first line, the word **الْهَمْ** should be split into **الْهَمْ م** as the first part of it belongs to the *sadr* and the second to the *'ağuz*. One solution to avoid splitting this word in such a way is to write inside the *tadwîr* the part of it that belongs to either hemistich, without omitting to add a space after it. In the second line, the word **أُمٌّ** should be split into **أُمٌّ م**, so that the only way to avoid splitting it into two parts is to write it all inside the *tadwîr*. In that case, as the word is to be placed in the middle, it has been surrounded by spaces.

Scaling and distortion of characters The *arabverse* environment and the `\bayt` command are designed to typeset the verses in a two-column, fixed width layout. This may result in a somewhat distorted text. Should that happen, one may adapt the layout by modifying the values of the above described `width` and `gutter` named arguments until the visual aspect of the layout be satisfactory. It has to be noted that distortion and warping may be even more perceptible in Roman than in Arabic characters.

Footnotes Footnotes are not set by default inside the `\bayt` command, but there are two easy ways to have them printed.

If they are little in number, each footnote may be split into pairs of `\footnote{mark{}}` (please mind the braces) in the argument of the `\bayt` command and `\footnotetext{}` outside the `\bayt` command.

If the footnotes are abundant in number, it is advised to load the *footnote* package which *arabluatex* will then use to typeset any kind of footnote that is called from the arguments of the `\bayt` command. Please note that the *footnote* package must be loaded *after* *arabluatex*.

Line numbering Inside the `arabverse` environment, the `linenumbers` environment of the `lineno` package may be used to have the lines of succeeding verses numbered. Please refer to the documentation of this package for more information or to the example below for a basic implementation of this technique.

5.1 Example

Here follow the first lines of Imru'u 'l-Qaysi's *Mu'allaqah*. In this example, `\SetArbDflt*` has been selected so as to mark the *'idgām* that is fit to this declamatory poetry:—²⁶

```

1 \begin{arab}[fullvoc]
2   qAla \cap{i}mrū'u 'l-\cap{q}aysi fI mu`allaqati-hi:
3 \end{arab}
4
5 \begin{arabverse}[mode=fullvoc, metre={(al.-darbu 'l-_tAnI mina
6   'l-`arU.di 'l-'_Ul_A mina 'l-.tawIlli)}]
7   \SetArbDflt*
8   \begin{linenumbers*}
9     \bayt{qifA nabki min _dikr_A .habIbiN wa-manzili}{bi-saq.ti
10       'l-liw_A bayna \cap{'l-d}a_hUli fa-\cap{.h}awmali}\\
11     \bayt{fa-\cap{t}U.di.ha fa-'l-\cap{m}iqrATi lam ya`fu
12       rasmu-hA}{limA nasa^gat-hA min ^ganUbiN wa-`sam'ali}}\\
13     \bayt{tar_A ba`ara 'l-'ar'Ami fI `ara.sAti-hA}{wa-qI`Ani-hA
14       ka-'anna-hu .habbu fulfuli}}\\
15     \bayt{ka-'annI .gadATa 'l-bayni yawma ta.hammalUA}{lad_A
16       samurAti 'l-.hayyi nAqifu .han.zali}}\\
17     \bayt{wuqUfaN bi-hA .sa.hbI `alayya ma.tiyya-hum}{yaqUUna 1A
18       tahlil 'asaN_A wa-ta^gammali}}\\
19     \bayt{wa-'inna ^sifA'I `abraTuN muharAqaTuN}{fa-hal `inda rasmiN
20       dAsiriN min mu`awwali}}\\
21   \end{linenumbers*}
22 \end{arabverse}

```

قالَ أَمْرُوْ الْقَيْسِ فِي مُعْلَمَةِ:

1	بِسْقَطِ الْلَّوْيِ بَنَ الدَّخُولِ فَوْمَلِ	قَبَّاكِ مِنْ ذَكْرِي حَيْبٍ وَمَنْزِلٍ
2	لَا نَسْجَتْهَا مِنْ جَنُوبٍ وَشَمَائِلَ	فَوُضُحَ فَالْمِقْرَأَةُ لَمْ يَعْفُ رَسْهَا
3	وَقِيعَانِهَا كَانَهُ حَبُّ فُلْلِ	تَرَى بَعْرَ الْأَرَامِ فِي عَرَصَاتِهَا
4	لَدِ سَرَاتِ الْحَى نَاقْفُ حَنْظَلِ	كَانَى غَدَاهَ الْبَيْنِ يَوْمَ بَحْلَوا
5	يَقُولُونَ لَا تَهْلِكْ أَسَى وَتَجَلِّ	وُقُوفًا بِهَا صَحِيْيِ عَلَى مَطَّهِمِ
6	فَهَلْ إِنْدَ رِسْمَ دَاسِرِ مِنْ مُعَوَّلِ	وَإِنْ شِفَاعَى عَبْرَةَ مَهْرَاقَةٍ

²⁶Please note that for the time being only the assimilation rules that are laid on item [b](#) on page [15](#) are applied. See section [2.2.1](#) on page [5](#) for more information.

(الْضَّرُبُ الْثَّانِي مِنَ الْعُروضِ الْأُولَى مِنَ الْطَّوْبَلِ)
qāla Imru'u 'l-Qaysi fi mu'allaqati-hi:

1 qifā nabki min dīkrā habib^{iu} wa-manzili
 2 fa-Tūdīha fa-*l*-Mīqrāti lam ya^{fu} rasmu-hā
 3 tarā ba[']ara 'l-'ar'āmi fī 'arasāti-hā
 4 ka-'annī jadāta 'l-bayni yawma tāhammālū
 5 wuqūf["] bi-hā shahbī alayya maṭīyya-hum
 6 wa-'inna šifāⁱ 'abrat^{um} muharāqat^{un}
 (ad-darbu 'l-tānī mina 'l-arūdi 'l-ūlā mina 't-ṭawīlī)

6 Special applications

Linguistics The same horizontal stroke as the *taṭwīl* (see section 4.7 on page 23) may be encoded $\langle B \rangle$; $\langle BB \rangle$ will receive the *taṣdīd*. This is useful to make linguistic annotations and comments on vowels:—

Bu Ba Bi BuN BaN BiN $\overset{\text{---}}{u}$ a i $\overset{\text{---}}{un}$ $\overset{\text{---}}{an}$ $\overset{\text{---}}{in}$, BBu BBa BBi $\overset{\text{---}}{u}$ a i, B--aN
 $\overset{\text{---}}{-an}$, B" $\overset{\circ}{..}$.

New feature v1.4.3 **Brackets** The various bracket symbols are useful in technical documents such as critical editions for indicating that some words or some letters must be added or removed. `arabluatex` will automatically fit those symbols to the direction of the text. For the time being, the following symbols are supported:

- parentheses: ()
- square brackets: []
- angle brackets: <>
- braces: {}

\abracess Parentheses, square and angle brackets may be input directly at the keyboard; however, words or letters that are to be read between braces must be passed as arguments to the `\abracess` command:—

```
1 \begin{arab}
2   \abracess{wa-qAla} 'inna 'abI kAna mina 'l-muqAtilaTi
3   wa-kAna--<--t> 'ummI min `u.zamA'i buyUti 'l-zamAzimaTi.
4 \end{arab}
```

{وقال إِنَّ أَيِّي كَانَ مِنَ الْمُقَاطِلَةِ وَكَادَتْ > أَيِّي مِنْ عُظَمَاءِ بَيْوتِ الزَّمَارَةِ.

7 Transliteration

It may be more appropriate to speak of “romanization” than “transliteration” of Arabic. As seen above in section 2.2 on pages 5–8, the “transliteration mode” may be selected globally or locally.

This mode transliterates the ArabTeX input into one of the accepted standards. As said above on page 5, two standards are supported at present:

dmg *Deutsche Morgenländische Gesellschaft*, which was adopted by the International Convention of Orientalist Scholars in Rome in 1935.²⁷ dmg transliteration convention is selected by default;

loc *Library of Congress*; this standard is part of a large set of standards for romanization of non-roman scripts adopted by the American Library Association and the Library of Congress.²⁸

More standards will be included in future releases of arabluatex.

\SetTranslitConvention

Convention The transliteration mode, which is set to `dmg` by default, may be changed at any point of the document by the `\SetTranslitConvention{<mode>}` command , where `<mode>` may be either `dmg` or `loc`. This command is also accepted in the preamble should one wish to set the transliteration mode globally, eg.:—

```
1 \usepackage{arabluatex}
2 \SetTranslitConvention{loc}
```

\SetTranslitStyle

Style Any transliterated Arabic text is printed in italics by default. This also can be changed either globally in the preamble or locally at any point of the document by the `\SetTranslitStyle{<style>}` command , where `<style>` may be any font shape selection command, eg. `\upshape`, `\itshape`, `\slshape`, and so forth.

New feature

v1.4

\SetTranslitFont

Font `\SetTranslitFont{}` allows any specific font to be selected for rendering transliterated text with the font-selecting commands of the `fontspec` or `luatextools` package. Of course, this font must have been defined properly. To take one example, here is how the *Gentium Plus* font may be used for rendering transliterated text:—

```
1 \newfontfamily\translitfont{Gentium Plus}[Ligatures=TeX]
2 \SetTranslitFont{\translitfont}
```

\cap

Proper names Proper names or book titles that must have their first letters up-

²⁷See Brockelmann et al. (1935).

²⁸See <http://www.loc.gov/catdir/cpso/roman.html> for the source document concerning Arabic language.

percased may be passed as arguments to the `\cap{<word>}` command. `\cap` is a clever command, for it will give the definite article *al-* in lower case in all positions. Moreover, if the initial letter, apart from the article, cannot be uppercased, viz. ' or '، the letter next to it will be uppercased:—

```
\cap{.hunayn-u} bn-u \cap{'is.h_aq-a} حُنَيْنُ بْنُ إِسْعَدٍ Hunaynu bnu
Ishāqa, \cap{'u_tm_an-u} عُثْمَانُ Utmānu, .daraba \cap{zayd-u}
bn-u \cap{_h_alidiN} \cap{sa`d-a} bn-a \cap{`awf-i} bn-i \cap{
`abd-i} \cap{'1-l_ah-i} ضَرَبَ زَيْدُ بْنُ خَلْدَ سَعْدَ بْنُ عَوْفٍ بْنُ عَبْدِ اللَّهِ daraba
Zaydu Hālidin Sa`da bna Awfi bni Abdi 'l-Lāhi.
```

However, `\cap` must be used cautiously in some very particular cases, for the closing brace of its argument may prevent a rule from being applied. To take an example, as seen above on page 17, the transliteration of ﷺ must be *Muhammad^{uni} 'n-nabī*, as nouns having the *tanwīn* take a *kasrah* in pronunciation before *'alifu l-waṣli*. In that case, encoding ﷺ like so: `\cap{mu.hammaduN}` is wrong, because the closing brace would prevent arabluatex from detecting the sequence `<-uN>` immediately followed by `<'-l>`. Fortunately, this can be circumvented in a straightforward way by inserting only part of the noun in the argument of `\cap` viz. up to the first letter that is to be uppercased, like so: `\cap{m}u.hammaduN`.

Hyphenation In case transliterated Arabic words break the TeX hyphenation algorithm, one may use the `\-` command to insert discretionary hyphens. This command will be discarded in all of the Arabic modes of arabluatex, but will be processed by any of the transliteration modes:—

```
\cap{'abU} \cap{bakriN} \cap{mu-.ham\-\-madu} bnu \cap{za\-\-ka
\-\-riy\-\-yA'a} \cap{'1-rAzI} أبو بكرz محمد بن زكريا الرأزى Abū Bakrin Mu-
hammadu bnu Zakariyyāa 'r-Rāzī.
```

7.1 Additional note on `dmg` convention

According to Brockelmann et al. (1935, p. 6), Arabic *i'rāb* may be rendered into `dmg` in three different ways:

- (a) In full: *Amrun*;
- (b) As superscript text: *Amr^{un}*;
- (c) Discarded: *Amr*.

`\arbup` By default, arabluatex applies rule **b**. Once delimited by a set of Lua functions, *i'rāb* is passed as an argument on to a `\arbup` command which is set to `\textsuperscript`.

`\NoArbUp` `\NoArbUp` may be used either in the preamble or at any point of the document in case one wishes to apply rule **a**. The default rule **b** can be set back with `\ArbUpDflt` at any point of the document.

`\SetArbUp` Finally, `\SetArbUp{<formatting directives>}` may be used to customize the way

New feature
v1.3

i'rāb is displayed. To take one example, here is how Arabic *i'rāb* may be rendered as subscript text:—

```

1 \SetArbUp{\textsubscript{#1}}
2 Arabic |dmg| transliteration for \arb{ra'aytu ^gAmi`aN
3 muhaddamaTaN mi'_danatu-hu}: \arb[trans]{ra'aytu
4 ^gAmi`aN muhaddamaTaN mi'_danatu-hu.}

```

Arabic *dmg* transliteration for رَأَيْتُ جَامِعًا مُهَدَّمَةً مِنْذَتَهُ: *ra'aytu ġāmi'aN muhaddamatan mi'_danatu-hu.*

As shown in the above example, #1 is the token that is replaced with the actual *tanwīn* in the formatting directives of the `\SetArbUp` command.

'i'rāb boundaries Every declinable noun (*mu'rāb*) may be declined either with or without *tanwīn*, viz. *munṣarif^{un}* or *gayr^u munṣarifⁱⁿ*. The former is automatically parsed by `arabluatex`, whereas the latter has to be delimited with an hyphen, like so:—

munṣarif: *mu`allimuN* ^{مُعَلِّم} *mu'allim^{un}*, *kA'inuN* ^{كَائِنٌ} *kā'in^{un}*, *kA'inAtuN* ^{كَاشَاتُ} *kā'in^{ātuN}*, \cap{`amraNU} ^{عُمْرُوا} *Amr^{an}*, *fataN_A* ^{فَتَاهَ} *fataⁿ*, *qA.diNI* ^{قَاضِي} *qādiⁿ*.

gayr munṣarif: *al-mu`allim-u* ^{الْمُعَلِّمُ} *al-mu'allim^u*, *kitAb-Ani* ^{كِتَابَانِ} *kitāb^{āni}*, *ra^sa'-Ani* ^{رَسَانِ} *rašā'a^{āni}*, *sAriq-Una* ^{سَارِقُونَ} *sāriq^{ūna}*, *qA.d-Una* ^{قَاضُونَ} *qādī^{ūna}*, *al-.zulm-Atu* ^{الظَّلَمَاتُ} *az-zulm^{ātu}*.

REM. a. As the *tanwīn* is passed over in pronunciation when it is followed by the letters ر, ل, ي, و, م, د (see item b on page 15), it may be desirable to further distinguish it by putting it above the line, but not to do the same for *gayr munṣarif* terminations. This can be achieved by simply omitting the hyphen before any *gayr munṣarif* termination:—

كَانَ غَيْبًا لِكَهْ لَيْسَ جُهَّةً مُرْقَأً
kAna .ganiyyaN l_akinna-hu labisa ^gubbaTaN mumazzaqaN 'aydu-hA
لَيْدَهَا kāna gāniyya^{an} lākinna-hu labisa ġubbat^{an} mumazzaq^{an} 'aydu-hā.

REM. b. Although the hyphen before the *tanwīn* is optional as `arabluatex` always parses nouns with such termination, it may also be used to mark better the inflectional endings:—

مَنَّعَ النَّاسَ كَافَةً مِنْ
mana'a 'l-nAs-a kAffaT-aN min mu_hA.tabati-hi 'a.had-uN bi-sayyidi-nA
مَنَّعَ النَّاسَ كَافَةً مِنْ mana'a 'n-nās^a kāffat^{an} min muhāṭabati-hi 'ahad^{un} bi-sayyidi-nā.

7.2 Examples

Here follows in transliteration the story of *Guhā* and his donkey (جُهَا وَحَمَارُهُ). See the code on page 7:—

‘dmg’ standard: ‘atā ṣadīq^{un} ’ilā Ġuhā yaṭlubu min-hu himāra-hu li-yarkaba-hu fī safratⁱⁿ qasīratⁱⁿ fa-qāla la-hu: “sawfa u-idu-hu ilay-ka fī l-masā’i wa-adfa’u la-ka uğrat^{an}.” fa-qāla Ġuhā: “anā ̄asif^{un} ġidd^{an} ’annī lā astaṭī’u an uhaqqīqa la-ka raghbata-ka fa-l-ḥimār^u laysa huna l-yawm^a.” wa-qabla ’an yutimma Ġuhā kalāma-hu bāda’ a l-ḥimār^u yanhaqu fī iṣṭabli-hi. fa-qāla la-hu ṣadīqu-hu: “innī asma’u himāra-ka yā Ġuhā yanhaqu.” fa-qāla la-hu Ġuhā: “garib^{un} amru-ka yā ṣadīqī a-tuṣaddiqu l-ḥimār^a wa-tukadḍiba-nī?”

‘loc’ standard: atā ṣadīqun ilā Juhā yaṭlubu min-hu himāra-hu li-yarkaba-hu fī safraṭin qasīratin fa-qāla la-hu: “sawfa u-idu-hu ilay-ka fī al-masā’i wa-adfa’u la-ka ujratan.” fa-qāla Juhā: “anā ̄asifun jiddan annī lā astaṭī’u an uhaqqīqa la-ka raghbata-ka fa-al-ḥimāru laysa hunā al-yawma.” wa-qabla an yutimma Juhā kalāma-hu bāda’ a al-ḥimāru yanhaqu fī iṣṭabli-hi. fa-qāla la-hu ṣadīqu-hu: “innī asma’u himāra-ka yā Juhā yanhaqu.” fa-qāla la-hu Juhā: “gharībun amru-ka yā ṣadīqī a-tuṣaddiqu al-ḥimāra wa-tukadhdhiba-nī?”

8 Buckwalter input scheme

New feature
v1.4

\SetInputScheme

Even though arabluatex is primarily designed to process the ArabTeX notation, it can also process the Buckwalter input scheme to a large extent.²⁹ The Buckwalter scheme is actually processed in two steps, as it is first converted into ArabTeX. Then, once this is accomplished, the ArabTeX scheme is processed through the above described functions. In this way, the Buckwalter input scheme can make the most of the arabluatex special features that are presented in section 2.2 on page 5.

The input scheme, which is set to `arabtex` by default, may be changed at any point of the document by the `\SetInputScheme{<scheme>}` command, where `<scheme>` may be either `arabtex` or `buckwalter`. This command is also accepted in the preamble should one wish to set the input scheme globally, like so:—

```
1 \usepackage{arabluatex}
2 \SetInputScheme{buckwalter}
```

‘base’, ‘xml’ and ‘safe’ schemes arabluatex can use any of the so-called Buckwalter ‘base’, ‘xml’ or ‘safe’ schemes as they are described in Habash (2010, pp. 25–26).³⁰ However, the following limitation apply to the ‘base’ and ‘xml’ schemes: the braces { and }, which are used to encode ى and ى, must be replaced with square brackets viz. [and] respectively.

It is therefore recommended to use the Buckwalter ‘safe’ scheme.

Table 6 gives the Buckwalter equivalents that are currently used by arabluatex. The additional characters that are defined in table 5 on page 24 are also available.

²⁹ See <http://www.qamus.org/transliteration.htm>

³⁰ I am grateful to Graeme Andrews who suggested that the ‘safe’ scheme be included in arabluatex.

Letter	Transliteration ³¹		Buckwalter notation

Table 6: Buckwalter scheme

Transliteration The Buckwalter notation can also be transliterated into any accepted romanization standard of Arabic. See above section 7 on page 30 for more information. However, it should be pointed out again that only accurate coding produces accurate transliteration. It is therefore at the very least highly advisable to use the hyphen for tying the definite article and the inseparable particles (viz. prepositions, adverbs and conjunctions) to words, like so:—

Al-EaAlamu *al-`alam^u*, Al-camsu *aš-šams^u*, bi-SinaAEapi
 Al-T~ib~i *بِصَنَاعَةِ الْطَّبِيبِ*, bi-śinā`atⁱ t-tibbiⁱ.

wa-Al-l~ehi *وَاللَّهُ* wa-`l-lāhⁱ, Al-Hamdu li-l~ehi *الْحَمْدُ لِلَّهِ* al-hamdu^u li-lāhⁱ.

Similary, it is not advisable to use l [('base' and 'xml' schemes) or M and L ('safe' scheme) to encode the 'alif^u l-mamdudatⁱ and the 'alif^u l-waṣlⁱ for such signs are supposed to be generated by arabluatex internal functions. Besides, as they do not *per se* convey any morphological information on what they are derived from, they cannot be transliterated accurately. To take one example, <i1Y Al-LntiqaADi gives لَيْلَ الْأَنْتِقَاضِ as expected, but only <i1Y Al-intiqadi can be transliterated as ilqⁱ l-intiqādi with the correct vowel ⟨i⟩ in place of the 'alif^u l-waṣlⁱ.

9 Unicode Arabic input

As said above in section 8 on page 33 about the Buckwalter input scheme, even though arabluatex is primarily designed to process the ArabTeX notation, it also accepts unicode Arabic input. It should be noted that arabluatex does in no way interfere with unicode Arabic input: none of the `voc`, `fullvoc`, `novoc` or `trans` options will have any effect on plain unicode Arabic for the time being.

That said, there are two ways of inserting unicode Arabic:

- \txarb (a) The `\txarb{<unicode Arabic>}` command for inserting unicode Arabic text in paragraphs;
- txarab (b) The `txarab` environment for inserting running paragraphs of Arabic text, like so:—

```

1  \begin{txarab}
2    <Unicode Arabic text>
3  \end{txarab}

```

10 L^AT_EX Commands in Arabic environments

General principle L^AT_EX commands are accepted in Arabic environments. The general principle which applies is that single-argument commands (`\command{<arg>}`) such as `\emph{<text>}`, `\textbf{<text>}` and the like, are assumed to have Arabic text as their arguments:—

\abjad{45} kitAbu-hu \emph{fI 'l-\cap{`AdAt-i}} 45
 kitābu-hu fi 'l-Ādātⁱ.³²

The same applies to footnotes:—

```

1 \renewcommand{\footnoterule}{%
2   \vfil\noindent\hrule[1mm]{.4\textwidth}{.15mm}}
3 \begin{arab}
4 'inna 'abi kAna mina 'l-muqAtilaT-i\footnote{al-muqAtilaT-i:
5 al-muqAtilaT-i}, wa-kAnat 'ummI min `u.zamA'-i buyUt-i
6 'l-zamAzimaT-i\footnote{al-zamAzimaT-u: .tA'ifaT-u mina
7 'l-furs-i}.
8 \end{arab}

```

إِنَّ أُبِي كَانَ مِنَ الْمُقَاطِلِ^a، وَكَانَ أُمِّي مِنْ عُظَمَاءِ بَوْتِ الزَّمَازِمَةِ.^b

^aالمُقَاطِلَة: المُقاتِلَة.
^bالزَّمَازِمَة: طَائِفَةٌ مِنَ الْفُرْسِ.

Some commands, however, do not expect running text in their arguments, or one may wish to insert English text eg. in footnotes or in marginal notes. arabluatex provides a set of commands to handle such cases.

`\LR{<arg>}` is designed to typeset its argument from left to right. It may be used

³²This is odd in Arabic script, but using such features as `\emph` or `\textbf` is a matter of personal taste.

in an Arabic environment, either `\arb{<Arabic text>}` or `\begin{arab} <Arabic text> \end{arab}`, for short insertions of left-to-right text, or to insert any L^AT_EX command that would otherwise be rejected by arabluatex, such as commands the argument of which is expected to be a dimension or a unit of measurement.

`\RL{<arg>}` does the same as `\LR{<arg>}`, but typesets its argument from right to left. Even in an Arabic environment, this command may be useful.

For example, to distinguish words with a different color, one may proceed like so:—

```

1 \begin{arab}
2 _tumma "intalaqa _dU 'l-qarn-ayni 'il_A 'ummaT-iN 'u_hr_A fI
3 \LR{\textcolor{red}{\arb{fullvoc}}{\arb{fullvoc}{((ma.tli`-i 'l-^sams-i))}}}
4 wa-1A bina'-a la-hum yu'amminu-hum mina 'l-^sams-i.
5 \end{arab}

```

ثُمَّ أَتَّلَقَ ذُو الْقَرْنَيْنِ إِلَى أُمَّةٍ أُخْرَى فِي 《مَطْلَعَ الشَّمْسِ》 وَلَا يُنَاءُهُمْ يُؤْمِنُهُمْ مِنَ الشَّمْسِ.

`\LRfootnote{<text>}` and `\RLfootnote{<text>}` typeset left-to-right and right-to-left footnotes respectively in Arabic environments. Unlike `\footnote{<text>}`, the arguments of both `\LRfootnote` and `\RLfootnote` are not expected to be Arabic text. For example, `\LRfootnote` may be used to insert English footnotes in running Arabic text:—

```

1 \arb{fullvoc}{\cap{z}ayd-uN\LRfootnote{%
2 \enquote{\arb{trans}}{\cap{z}ayd} is the son of
3 \arb{trans}{\cap{'a}mr}: the second
4 noun is not in apposition to the first, but forms
5 part of the predicate\ldots} "ibn-u \cap{'a}mr-iNU}

```

زَيْدُ بْنُ عَمْرُو

^a “*zayd* is the son of *amr*”: the second noun is not in apposition to the first, but forms part of the predicate...

When footnotes are typeset from right to left, it may happen that the numbers of the footnotes that are at the bottom of the page be typeset in the wrong direction. For example, instead of an expected number 18, one may get 81. arabluatex is not responsible for that, but should it happen, it may be necessary to redefine in the preamble the L^AT_EX macro `\thefootnote` like so:—

```
\renewcommand*{\thefootnote}{\textsuperscript{\LR{\arabic{footnote}}}}
```

`\FixArbFtnmk` Another solution is to put in the preamble, below the line that loads arabluatex, the `\FixArbFtnmk` command. However, for more control over the layout of footnotes marks, it is advisable to use the `scrextend` package.³³

³³ See <http://ctan.org/pkg/koma-script>; read the documentation of KOMA-script for details about the `\deffootnotemark` and `\deffootnote` commands.

\LRmarginpar

The \LRmarginpar command does for marginal notes the same as \LRfootnote does for footnotes. Of course, it is supposed to be used in Arabic environments. Note that \marginpar also works in Arabic environments, but it acts as any other single-argument command inserted in Arabic environments. The general principle laid on page 36 applies.

\setRL

\setLR

\setRL and \setLR may be used to change the direction of paragraphs, either from left to right or from right to left. As an example, an easy way to typeset a right-to-left sectional title follows:—

```
1 \setRL
2 \section*\{\arb{barzawayhi li-buzurjumihra bn-i 'l-buxtikAni}\}
3 \setLR
4 \begin{arab}
5 qAla barzawayhi bn-u 'azhar-a, ra's-u 'a.tibba'-i fAris-a...
6 \end{arab}
```

بَرْزَوِيَّهُ لِبُزْرُجُمُهْرَ بْنُ الْبُخْتَكَانِ

قَالَ بَرْزَوِيَّهُ بْنُ أَزْهَرَ، رَأْسُ أَطْبَاءِ فَارِسٍ...

10.1 Environments

New feature
v1.5

Environments such as \begin{quote}... \end{quote} may be nested inside the arab environment. Up to one optional argument may be passed to each nested environment, like so:—

```
1 \begin{arab}
2   \begin{<environment>}[<options>]
3     <Arabic text>
4   \end{<environment>}
5 \end{arab}
```

In the following example, the quoting package is used:—

```
1 \setquotestyle{arabic}
2 \begin{arab}[fullvoc]
3   kAna \cap{'abU} \cap{'l-hu_dayli} 'ahd_A 'il_A \cap{muwaysiN}
4   dajAjaTaN. wa-kAna dajAjatu-hu 'llatI 'ahdA-hA dUna mA kAna
5   yuttaxa_du li-\cap{muwaysiN}. wa-l_akinna-hu bi-karami-hi
6   wa-bi-.husni xuluqi-hi 'a.zhara 'l-ta`ajjuba min simani-hA
7   wa.tIbi la.hmi-hA. wa-kAna <\cap{'abU} \cap{'l-hu_dayli}>
8   yu`rafu
9   bi-'l-'imsAki 'l-^sadIdi. fa-qAla: \enquote{wa-kayfa ra'ayta yA}
```

```

9      \cap{'abA} \cap{'imrAna} tilka 'l-dajAjaTa?} qAla:
10     \enquote{kAnat `ajabaN mina 'l-'ajabi!} fa-yaqUlu:
11     \begin{quoting}[begintext=>, endtext=<]
12       wa-tadrI mA jinsu-hA? wa-tadrI mA sinnu-hA? fa-'inna
13       'l-dajAjaTa 'inna-mA ta.tIbu bi-'l-jinsi wa-'l-sinni. wa-tadrI
14       bi-'ayyi ^say'iN kunnA nusamminu-hA? wa-fI 'ayyi makAniN kunnA
15       na`lifu-hA?
16     \end{quoting}
17     fa-lA yazAlu fI h_a_dA wa-'l-'A_haru ya.d.haku .da.hkaN
18     na`rifu-hu
19     na.hnu wa-lA ya`rifu-hu \cap{'abU} \cap{'l-hu_dayli}.
\end{arab}

```

كَانَ أَبُو الْمُذَيْلِ أَهْدَى إِلَى مُوسَى دَجَاجَةً. وَكَانَتْ دَجَاجَتُهُ الَّتِي أَهْدَاهَا دُونَ مَا كَانَ يَخْذُلُ مُوسَى. وَلَكِنَّهُ
يَكْرَمُهُ وَيَحْسُنُ خُلُقُهُ أَطْهَرُ التَّعْجُبَ مِنْ سَمْهَا وَطَيِّبُ لَهُمَا. وَكَانَ <أَبُو الْمُذَيْل> يُعْرَفُ بِالْإِمْسَاكِ الشَّدِيدِ.
فَقَالَ: ”وَكَيْفَ رَأَيْتَ يَا أَبَا عَمْرَانَ تِلْكَ الدَّجَاجَةَ؟“ قَالَ: ”كَانَتْ عَجَباً مِنَ الْعَجَبِ!“ فَيَقُولُ:

»وَتَدْرِي مَا جِئْنَا؟ وَتَدْرِي مَا سَهَّا؟ فَإِنَّ الدَّجَاجَةَ إِنَّمَا تَطِيبُ بِالْجُنُسِ وَالسِّنِّ. وَتَدْرِي يَأْتِي شَيْءٌ كُلُّ نَسْمَهَا؟ وَفِي أَيِّ
مَكَانٍ كُلُّ نَعْلَفُهَا؟«

فَلَّا يَزَالُ فِي هَذَا وَالآخِرُ يَضْحَكُ ضَحْكًا نَعِرِفُهُ نَحْنُ وَلَا يَعْرِفُهُ أَبُو الْمُذَيْلِ.

10.1.1 Lists

Lists environments are also accepted inside the `arab` environment. One may either use any of the three standard list environments, viz. `itemize`, `enumerate` and `description` or use a package that provides additional refinements such as `paralist`.

To take a first example, should one wish to typeset a list of manuscripts, the `description` environment may be used like so:—

```

1   \setRL\paragraph{\arb[novoc]{rumUzi 'l-kitAbi}}\setLR
2   \begin{arab}[novoc]
3     \begin{description}
4       \item[b] max.tU.tu 'l-maktabaTi 'l-'ahliyyaTi bi-\cap{bArIs} 2860
5         `arabiyyuN.
6       \item[s] max.tU.tu 'l-maktabaTi 'l-'ahliyyaTi bi-\cap{bArIs} 2859
7         `arabiyyuN.
8       \item[m] max.tU.tu majlisi \arb[novoc]{^sUrAY maly} .tahrAna 521.
9     \end{description}
10    \end{arab}

```

رموز الكتاب

ب مخطوط المكتبة الأهلية بباريس ٢٨٦٠ عربي.

س مخطوط المكتبة الأهلية بباريس ٢٨٥٩ عربي.

م مخطوط مجلس شورای ملی طهران ٥٢١

As a second example, the contents of a treatise may be typeset with the standard list environments, like so:—

```
1 \setRL\centerline{\arb{\textbf{al-qAnunu fI 'l-.tibbi}}}\setLR
2 \begin{arab}
3   \begin{itemize}
4     \item \textbf{al-fannu 'l-'awwalu} fI .haddi 'l-.tibbi
5       wa-maw.dU`Ati-hi mina 'l-'umUri 'l-.tabI`iyyaTi wa-ya^stamilu
6         `al_A sittaTi ta`AlImiN
7       \begin{itemize}
8         \item \textbf{al-ta`lImu 'l-'awwalu} [wa-huwa fa.slAni]
9           \begin{itemize}
10             \item \textbf{al-fa.slu 'l-'awwalu}
11               \end{itemize}
12             \end{itemize}
13       \end{itemize}
14   \end{arab}
```

القانون في الطب

- آفُن الأول في حد الطب و موضوعاته من الأمور الطبيعية ويشتمل على ستة تعاليم

- التعلم الأول [وهو فصلان]

- الفصل الأول

Caveat The various French definition files of the `babel` package viz. `acadian`, `canadien`, `francais`, `frenchb` or `french` all redefine the list environments, which breaks the standard definition file that is used by `arabluatex`. Therefore, `babel-french` must be loaded with the `StandardLayout=true` option, like so:—

```
1 \usepackage[french]{babel}
2 \frenchbsetup{StandardLayout=true}
```

This option will prevent babel-french from interfering with the layout of the document. Then the package paralist may be used to make the lists ‘compact’ as babel-french do.

10.2 csquotes

The recommended way of inserting quotation marks in running Arabic text is to use csquotes. With the help of the \DeclareQuoteStyle command, one can define an Arabic style, like so:—

```

1  \usepackage{csquotes}
2  \DeclareQuoteStyle{arabic}
3  {\rmfamily\textquotedblright}{\rmfamily\textquotedblleft}
4  {\rmfamily\textquoteright}{\rmfamily\textquoteleft}
```

Then, use this newly defined style with \setquotestyle, like so:—

```

1  \setquotestyle{arabic}
2  \begin{arab}
3    fa-qAla la-hu ju.hA: \enquote{.garIb-uN 'amru-ka yA .sadIqI
4      'a-tu.saddiqu 'l-.himAr-a wa-tuka_d_diba-nI?}
5  \end{arab}
6  \setquotestyle{english}
```

فَقَالَ لَهُ جُحَّا: “عَرِيبٌ أَمْ رُكَّبٌ يَا صَدِيقِي أَتَصْدِقُ الْجَارَ وَتَكْبِيْنِ؟”

REM. Do not forget to set back the quoting style to its initial state once the Arabic environment is closed. See the last line in the code above.

10.3 reledmac

The two-arguments command \edtext{\langle lemma\rangle}{\langle commands\rangle} is supported inside \begin{arab} ... \end{arab}. As an example, one may get arabluatex and reledmac to work together like so:—

```

1  \begin{numbering}
2  \pstart
3  \begin{arab}
4  wa-ya.sIru ta.hta 'l-jild-i
5  \edtext{\arb{.sadId-uN}}{\Afootnote{M: \arb{.sadId-aN} E1}}
6  \end{arab}
7  \pend
8  \end{numbering}
```

10.4 quran

arabluatex is compatible with the `quran` package so that both can be used in conjunction with one another for typesetting the *Qurān*. As `quran` draws the text of the *Qurān* from a unicode encoded database, its commands have to be passed as arguments to the `\txarab` command for short insertions in left-to-right paragraphs, or inserted inside the `txarab` environment for typesetting running paragraphs of *Qurānic* text (see above section 9 on page 35 for more details). Please note that `arabluatex` takes care of formatting the Arabic: therefore, it is recommended to load the `quran` package with the `nopar` option, after `arabluatex` itself has been loaded, like so:—

```
1 \usepackage{arabluatex}
2 \usepackage[nopar]{quran}
```

As an example, the following code will typeset the *sūrah al-Fātiḥah*:—

```
1 \begin{txarab}
2   \quransurah[1]
3 \end{txarab}
```

بِسْمِ اللَّهِ الرَّحْمَنِ الرَّحِيمِ ﴿١﴾ الْحَمْدُ لِلَّهِ رَبِّ الْعَالَمِينَ ﴿٢﴾ الرَّحْمَنِ الرَّحِيمِ ﴿٣﴾ مَالِكِ يَوْمِ الدِّينِ ﴿٤﴾
إِيَّاكَ نَعْبُدُ وَإِيَّاكَ نَسْتَعِنُ ﴿٥﴾ اهْدِنَا الصِّرَاطَ الْمُسْتَقِيمَ ﴿٦﴾ صِرَاطَ الَّذِينَ أَنْعَمْتَ عَلَيْهِمْ غَيْرَ المَغْضُوبِ
عَلَيْهِمْ وَلَا الضَّالِّينَ ﴿٧﴾

11 Future work

A short, uncommented, list of what is planned in the versions of `arabluatex` to come follows:

- (a) Short-term:
 - i. TEI xml support: `arabluatex` will interoperate with TEI `xml` through new global and local options that will output Arabic in a TEI `xml` compliant file in addition to the usual PDF output: see on page 3.
- (b) Medium-term:
 - i. More languages: the list of supported languages will eventually be the same as `arabtex`: see footnote 4 on page 4.
 - ii. Formulate propositions for extending the ArabTEX notation and the transliteration tables. Include them in `arabluatex`. See section 4.9 on page 24.

12 Implementation

The most important part of arabluatex relies on Lua functions and tables. Read the .lua files that accompany arabluatex for more information.

```
1 \NeedsTeXFormat{LaTeX2e}
2 \ProvidesPackage{arabluatex}%
3 [2017/01/08 v1.7.1 An ArabTeX-like interface for LuaLaTeX]
4 \RequirePackage{ifluatex}
```

arabluatex requires Lua^{AT}EX of course. Issue a warning if the document is processed with another engine.

```
5 \ifluatex\else
6 \PackageError{arabluatex}{lualatex needed}%
7 Package `arabluatex' needs LuaTeX.\MessageBreak
8 So you should use `lualatex' to process your document.\MessageBreak
9 See documentation of `arabluatex' for further information.}%
10 \expandafter\expandafter\expandafter\csname endinput\endcsname
11 \fi
```

Declare the global options, and define them:

```
12 \DeclareOption{voc}{\def\al@mode{voc}}
13 \DeclareOption{fullvoc}{\def\al@mode{fullvoc}}
14 \DeclareOption{novoc}{\def\al@mode{novoc}}
15 \DeclareOption{trans}{\def\al@mode{trans}}
16 \ExecuteOptions{voc}
17 \ProcessOptions\relax
18 \def\al@mode@voc{voc}
19 \def\al@mode@fullvoc{fullvoc}
20 \def\al@mode@novoc{novoc}
21 \def\al@mode@trans{trans}
```

Packages that are required by arabluatex:

```
22 \RequirePackage{etoolbox}
23 \RequirePackage{arabluatex-patch}
24 \RequirePackage{fontspec}
25 \RequirePackage{amsmath}
26 \RequirePackage{luacode}
27 \RequirePackage{xparse}
28 \RequirePackage{environ}
29 \RequirePackage{adjustbox}
30 \RequirePackage{xkeyval}
```

The following boolean will be set to true in RL mode:

```
31 \newbool{al@rlmode}
```

Here begins the real work: load arabluatex.lua:

```
32 \luadirect{dofile(kpse.find_file("arabluatex.lua"))}
```

This is needed by the current versions of polyglossia and luabidi. luabidi provides a \Footnote command. Use it as well if it is loaded.

```
33 \luadirect{tex.enableprimitives("luatex",tex.extraprimitives("omega"))}
```

Font setup. If no Arabic font is selected, issue a warning message and attempt to load the Amiri font which is included in TeXlive:

```

34 \AtBeginDocument{\ifdefined\arabicfont\relax\else
35 \PackageWarning{arabluatex}{\string\arabicfont\ is not defined.^^JI
36   will try to load Amiri}%
37 \newfontfamily\arabicfont[Script=Arabic]{Amiri}\fi}%

```

- \setRL This neutralizes what is defined by the same command in luabidi:

```

38 \AtBeginDocument{\def\setRL{\booltrue{al@rlmode}\pardir TRT\textdir TRT}}

```
- \setLR The same applies to \setLR:

```

39 \AtBeginDocument{\def\setLR{\boolfalse{al@rlmode}\pardir TLT\textdir TLT}}

```
- \LR This command typesets its argument from left to right. As \LR may be already defined, we need to redefine for it to suit our purpose:

```

40 \AtBeginDocument{\ifdef{\LR}{%
41   {\RenewDocumentCommand{\LR}{m}{\bgroup\textdir TLT\rmfamily#1\egroup}}%
42   {\NewDocumentCommand{\LR}{m}{\bgroup\textdir TLT\rmfamily#1\egroup}}}}

```
- \RL This one typesets its argument from right to left. Same remark as above regarding the need of redefinition.

```

43 \AtBeginDocument{\ifdef{\RL}{%
44   {\RenewDocumentCommand{\RL}{m}{\bgroup\textdir TRT\rmfamily#1\egroup}}%
45   {\NewDocumentCommand{\RL}{m}{\bgroup\textdir TRT#1\rmfamily\egroup}}}}

```
- \aemph Arabic emphasis. Needs to be redefined as well.

```

46 \AtBeginDocument{\ifdef{\aemph}{%
47   {\RenewDocumentCommand{\aemph}{m}{$\overline{\text{\#1}}$}}%
48   {\NewDocumentCommand{\aemph}{m}{$\overline{\text{\#1}}$}}}}

```
- \SetInputScheme arabluatex is designed for processing ArabTeX input notation. \SetInputScheme may be used in the preamble or at any point of the document should the user wish to use a different notation such as the ‘Buckwalter scheme’.

```

49 \def\al@input@scheme{arabtex}
50 \NewDocumentCommand{\SetInputScheme}{m}{\def\al@input@scheme{#1}}

```
- \SetArbEasy By default, arabluatex applies complex rules to generate euphonic *tašdīd*, *'alif* *mamdu'ah* and *sukūn* depending on the modes which are selected, either *voc*, *fullvoc* or *trans*. Such refinements can be discarded with \SetArbEasy, either globally in the preamble or at any point of the document. Note that \SetArbEasy keeps the *sukūn* that is generated, while the starred version \SetArbEasy* takes it away. Default complex rules can be set back at any point of the document with \SetArbDflt.

```

51 \def\al@arb@rules{dflt}

```
- \SetArbDflt* As of v1.6, arabluatex does not applies any more the assimilation rules that are laid on item b on page 15; a new starred version \SetArbDflt* is now available to the user should he wish to apply them.

	<pre> 52 \NewDocumentCommand{\SetArbEasy}{s}{% 53 \IfBooleanTF{#1} 54 {(\def\al@arb@rules{easynosukun})} 55 {(\def\al@arb@rules{easy})}} 56 \NewDocumentCommand{\SetArbDflt}{s}{% 57 \IfBooleanTF{#1} 58 {(\def\al@arb@rules{idgham})} 59 {(\def\al@arb@rules{dflt})}} </pre>
\SetTranslitFont	By default, the font that is used for transliterated text is the main font of the document. Any other font may also be selected with the font-selecting commands of the <code>fontspec</code> package.
	<pre> 60 \def\al@trans@font{\rmfamily}% 61 \NewDocumentCommand{\SetTranslitFont}{m}{\def\al@trans@font{#1}} </pre>
\SetTranslitStyle	By default any transliterated Arabic text is printed in italics. This can be changed either globally in the preamble or at any point of the document:
	<pre> 62 \def\al@trans@style{\itshape}% 63 \NewDocumentCommand{\SetTranslitStyle}{m}{\def\al@trans@style{#1}} </pre>
\SetTranslitConvention	\SetTranslitConvention{ <i>convention</i> } may be used to change the transliteration convention, which is <code>dmg</code> by default:
	<pre> 64 \def\al@trans@convention{dmg} 65 \NewDocumentCommand{\SetTranslitConvention}{m}{\def\al@trans@convention{#1}} </pre>
\arbup	By default, \arbup is set to \textsuperscript. This is how the <i>tanwīn</i> that takes
\NoArbUp	place at the end of a word should be displayed in <code>dmg</code> mode. \NoArbUp may be
\ArbUpDflt	used either in the preamble or at any point of the document in case one wishes to
\SetArbUp	have the <i>tanwīn</i> on the line. The default rule can be set back with \ArbUpDflt at
	any point of the document. Finally \SetArbUp may be used to customize the way
	<i>tanwīn</i> is displayed: this command takes the formatting directives as argument, like
	so: \SetArbUp{ <i>code</i> }.
	<pre> 66 \NewDocumentCommand{\al@arbup@dflt}{m}{\thinspace#1}% 67 \NewDocumentCommand{\al@arbup}{m}{\al@arbup@dflt{#1}} 68 \NewDocumentCommand{\arbup}{m}{\al@arbup{#1}} 69 \NewDocumentCommand{\ArbUpDflt}{}{\let\al@arbup=\al@arbup@dflt} 70 \NewDocumentCommand{\NoArbUp}{}{\RenewDocumentCommand{\al@arbup}{m}{##1}} 71 \NewDocumentCommand{\SetArbUp}{m}{\RenewDocumentCommand{\al@arbup}{m}{#1}} </pre>
\cap	Proper Arabic names or book titles should be passed to the \cap command so that they have their first letters uppercased. \cap is actually coded in Lua.
	<pre> 72 \DeclareDocumentCommand{\cap}{m}% 73 {\luadirect{tex.sprint(cap(\luastrings{#1}))}} </pre>
\txarb	\txarb sets the direction to right-to-left and selects the Arabic font. It is used internally by several Lua functions, but available to the user should he wish to insert utf8 Arabic text in his document.

\txtrans \txtrans is used internally by several Lua functions to insert transliterated Arabic text. Therefore, it is not documented.

```

74 \DeclareDocumentCommand{\txarb}{+m}{\bgroup\textrdir
75   TRT\arabicfont#1\egroup}
76 \DeclareDocumentCommand{\txtrans}{+m}{\bgroup\textrdir
77   TLT\al@trans@font#1\egroup}
```

txarab The txarab environment does for paragraphs the same as \txarb does for short insertions of utf8 Arabic text.

```

78 \NewDocumentEnvironment{txarab}{}{%
79   \par%
80   \booltrue{al@rlmode}%
81   \pardir TRT\textrdir TRT\arabicfont{}\par}
```

\arb The \arb command detects which Arabic mode is to be used, either globally if no option is set, or locally, then passes its argument to the appropriate Lua function.

```

82 \DeclareDocumentCommand{\arb}{0{\al@mode} +m}{%
83 {\edef{@tempa{#1}}%
84   \ifx{@tempa\al@mode@voc}%

```

arabverse The `arabverse` environment may receive different options: `mode`, `width`, `gutter`, `metre`, `utf` and `delim`; all of them are defined here just before the `arabverse` environment:

```

134 \newlength{\al@bayt@width}
135 \newlength{\al@gutter@width}
136 \setlength{\al@bayt@width}{.3\textwidth}
137 \setlength{\al@gutter@width}{.15\al@bayt@width}
138 \define@key{al}{verse}[width]{\setlength{\al@bayt@width}{#1}}
139 \define@key{al}{verse}[gutter]{\setlength{\al@gutter@width}{#1}}
140 \define@key{al}{verse}[metre]{\arb{#1}}
141 \define@boolkey{al}{verse}[utf][true]{}
142 \define@boolkey{al}{verse}[delim][true]{}
143 \define@choicekey{al}{verse}[mode]{fullvoc, voc, novoc,
144   trans}{\def\al@mode{#1}}
145 \presetkeys{al}{verse}[metre=\LR{\vskip -\baselineskip}, utf=false,
146   delim=false]{}

```

Then follows the environment itself:

```

147 \NewDocumentEnvironment{arabverse}{O{}}
148 {\par\centering\noindent\bgroup\setkeys{al}{verse}[metre]{#1}%
149 \ifx\al@mode\al@mode@trans%
150 \ifal@verse@utf\setRL\else\setLR\fi%
151 \else\setRL\fi}%
152 {\hfill\setkeys{al}{verse}[width,gutter,utf,mode]{#1}\egroup}

```

- \bayt Each verse consists of two hemistichs; therefore the \bayt command takes two arguments, the first receives the *sadr* and the second the *ağuz*. That two subsequent hemistichs should be connected with one another is technically named *tadwîr*. In some of these cases, the hemistichs may be connected by a prominent horizontal flexible stroke which is drawn by the \al@verse@stroke command.
- \SetHemistichDelim A hemistich delimiter also may be defined. By default, it is set to the ‘star’ character: *. The \SetHemistichDelim{<delimiter>} command may be used at any point of the document to change this default setting.

```

153 \NewDocumentCommand{\arb@utf}{m}{%
154   \ifal@verse@utf\txarb{#1}\else\arb{#1}\fi}
155 \def\al@hemistich@delim{*}
156 \NewDocumentCommand{\SetHemistichDelim}{m}{\def\al@hemistich@delim{#1}}

\arbnul  The \arbnul command does nothing by itself. It is processed only if it is found in Arabic context so as to put back on contextual analysis in case it has been broken by other commands.
192 \NewDocumentCommand{\arbnul}{m}{\relax}

\abrac   \abrac{\text{Arabic text}} puts its argument between braces. This macro is written in Lua and is dependent on the current value of tex.textdir.
193 \NewDocumentCommand{\abrac}{+m}{%
194 \luadirect{tex.sprint(abrac(\luastringsN{#1}))}%

\LRmarginpar \LRmarginpar is supposed to be inserted in an Arabic environment. It typesets his argument in a marginal note from left to right.
195 \DeclareDocumentCommand{\LRmarginpar}{m}{\marginpar{\textdir TLT #1}%

\LRfootnote \LRfootnote and \RLfootnote are supposed to be used in Arabic environments for insertions of non Arabic text. \LRfootnote typesets its argument left-to-right...
\RLfootnote while \RLfootnote typesets its argument left-to-right.
196 \DeclareDocumentCommand{\LRfootnote}{m}{\bgroup\pardir
197 TLT\LR{\footnote{#1}}\egroup
198 \DeclareDocumentCommand{\RLfootnote}{m}{\bgroup\pardir
199 TRT\LR{\footnote{#1}}\egroup

\FixArbFtnmk In the preamble, just below \usepackage{arabluatex}, \FixArbFtnmk may be of some help in case the footnote numbers at the bottom of the page are printed in the wrong direction. This quick fix uses and loads scrextend if it is not already loaded.
200 \NewDocumentCommand{\FixArbFtnmk}{}{%
201 \@ifpackageloaded{scrextend}%
202 {\AtBeginDocument{\deffootnote{2em}{1.6em}{\LR{\thefootnotemark}\enskip}}}%
203 {\RequirePackage{scrextend}%
204 \AtBeginDocument{\deffootnote{2em}{1.6em}{\LR{\thefootnotemark}\enskip}}}%

```

That is it. Say goodbye before leaving.

Patches

```

205 \NeedsTeXFormat{LaTeX2e}
206 \ProvidesPackage{arabluatex-patch}%
207 [2016/11/14 v1.0 patches for arabluatex]

```

I have put in a separate .sty file external lines of code that I had to patch for a good reason. I hate doing this, and hopefully, most of these lines will disappear as soon as they are not required anymore.

The following is taken from `latex.ltx`. I had to make this patch for I could not find a way to process the list environments in right-to-left mode. The LuaT_EX primitives `\bodydir` and `\pagedir` will eventually allow us to get rid of this:

```

208 \def\list#1#2{%
209   \ifnum \clistdepth >5\relax
210     \@toodeep
211   \else
212     \global\advance\clistdepth\@ne
213   \fi
214   \rightmargin\z@
215   \listparindent\z@
216   \itemindent\z@
217   \csname \list\romannumeral\the\clistdepth\endcsname
218   \def\@itemlabel{#1}%
219   \let\makelabel\@mklab
220   \@nmbrlistfalse
221   #2\relax
222   \@trivlist
223   \parskip\parsep
224   \parindent\listparindent
225   \advance\linewidth -\rightmargin
226   \advance\linewidth -\leftmargin

patch begins:
227   \ifbool{al@rlmode}{\advance\@totalleftmargin \rightmargin}%
228   {\advance\@totalleftmargin \leftmargin}

patch ends.
229   \parshape \@ne \@totalleftmargin \linewidth

Change History

v1.0	v1.4
General: Initial release	1
v1.0.1	\SetInputScheme: \SetInputScheme may be used to process other input schemes such as ‘Buckwalter’
General: Minor update of the documentation	44
v1.1	\SetTranslitFont: For selecting a specific font for transliterated texts
\abjad: New and more flexible \abjad command.	48
v1.2	v1.4.3 \abracess: New \abracess command which expresses its argument between braces.
\SetArbEasy: New \SetArbEasy/\SetArbDflt for 'modern' or 'classic' Arabic styles.	44
v1.3	v1.4.4 \SetArbEasy*: this starred version discards the <i>sukūn</i> in addition to what is already discarded by \SetArbEasy.
\arbut: <i>i'rāb</i> is now written as superscript text in dmg mode by default.	45
v1.5	\txarab: New txarab environment for typesetting running paragraphs in unicode Arabic .

General: Compatibility with the <code>quran</code> package	42	\bayt: New macro \bayt for typesetting each verse inside the <code>arabverse</code> environment	47
Environments may be nested inside the <code>arab</code> environment ..	38	<code>arabverse</code> : New environment <code>arabverse</code> for typesetting Arabic poetry	47
v1.6			
\SetArbDfl*: This starred version applies the assimilation rules in addition to what \SetArbDfl already does.	44	v1.7	
\SetHemistichDelim: New \SetHemistichDelim command for changing the default delimiter between hemistichs .	48	\arbnnull: New \arbnnull command for putting back on any contextual analysis rule broken by other commands.	48

Index

Numbers written in italic refer to the page where the corresponding entry is described; numbers underlined refer to the code line of the definition; numbers in roman refer to the code lines where the entry is used.
